

REPORT TO: East Lothian Council

MEETING DATE: 17 November 2015

BY: Depute Chief Executive (Partnerships and Community Services)

1

SUBJECT: East Lothian Local Development Plan – Draft Proposed Plan

1 PURPOSE

- 1.1 That Council approves the draft proposed Plan to enable officers to finalise essential technical work on cumulative impacts and produce a Proposed Local Development Plan (LDP) to submit for examination by Scottish Ministers.

2 RECOMMENDATIONS

2.1 That Council:

- a) approves the compact growth development strategy set out in the draft proposed Plan as the competent planning strategy for development in East Lothian over the period of the LDP;
- b) approves the sites and proposals of the draft proposed Plan as the best fulfilment of the compact growth development strategy; and
- c) approves the policies of the draft proposed Plan as the means of delivering and managing development appropriately;

all subject to the required technical work on cumulative impacts, presentational and editorial amendments for publication and to be brought before Council in due course for ratification as the Council's Proposed Plan.

3 BACKGROUND

- 3.1 The draft proposed Plan follows on from the Main Issues Report approved by Members for public consultation in October 2014 and the

subsequent report on that 12-week consultation to Members of April 2015, including the responses of statutory consultees.

- 3.2 The draft proposed Plan should allow for confirmation of strategy, sites and policy for future development. Whilst this is not a statutory stage of the development plan process it will allow officers to complete the technical work required to underpin the Proposed Plan which will then be ratified for a six-week period of representation after which it will be subject to examination by Scottish Ministers and, subject to any Reporter recommendations (which are largely binding), be brought before the Council for adoption as the Council's Local Development Plan.
- 3.3 The recommended Compact Growth strategy for East Lothian's future land use has due regard to National Planning Framework 3: June 2014 (NPF3), Scottish Planning Policy: June 2014 (SPP) and the Southeast Scotland Strategic Development Plan June 2013 (SDP) and with legislative requirements for sustainability (Climate Change (Scotland) Act 2009; Sections 3D and 3E Town and Country Planning (Scotland) Act 1997 as amended). It also responds to the Council's Plan 2012-17, the Single Outcome Agreement 2013-14 and the Council's Economic Strategy 2012-22.
- 3.4 The draft proposed Plan draws from the MIR analysis of East Lothian and the issues facing it, including housing market, population and socio-economic change, infrastructure and environmental issues based on the Monitoring Statement, and on the requirements of the SDP. The most significant SDP requirement is that East Lothian accommodates some 10,050 houses in the period to 2024, together with provision of 76 hectares of employment land for economic development purposes. The SDP also sets out the strategic development area (SDA) for East Lothian, based around the A1/East Coast Main Line railway corridor.

National and Strategic Planning Context

- 3.5 Scottish Ministers' planning vision as set out in NPF3 is for:

a growing, low carbon economy ... growth that can be achieved whilst reducing emissions and which respects the quality of environment, place and life which makes our country so special. Planning makes Scotland a successful, sustainable place; a low carbon place; a natural, resilient place; a connected place (NPF3, Purpose and Planning Hierarchy, frontispiece).
- 3.6 SPP shares this vision for the planning system in Scotland (paragraph 11). Its principle policies focus on sustainability and placemaking (NPF3 as above; SPP p8). Development plans are required to set out a spatial strategy which is both sustainable and deliverable (paragraph 30). In developing the spatial strategy planning authorities should identify the most sustainable locations for longer-term development and, where necessary, review the boundaries of any green belt. Development should optimise the use of existing resource capacities and existing infrastructure. Local development plans should contribute to high-quality

places, reflecting SPP and related Scottish Government design policies (paragraph 40).

- 3.7 SPP further requires that development plans ensure a generous supply of land allocated for housing, including for affordable housing, and to maintain an adequate effective five year housing land supply. To achieve a generous supply of housing land SPP requires land allocations of some 10 to 20 per cent in addition to the housing supply target (paragraph 110).
- 3.8 Through the Housing Needs and Demand Assessment (HNDA), the SDP and its Supplementary Guidance on Housing Land, the Housing Supply Target identified for the LDP is for the delivery of 10,050 houses over the period 2014 to 2024, and for each of the five-year plan periods within that timescale, 6,250 houses between 2014 and 2019, and 3,800 houses between 2019 and 2024 (SDP Supplementary Guidance Housing Land p3). The Council has a statutory obligation to allocate land to accommodate this housing growth with a generous land supply through the LDP.
- 3.9 Part of this requirement is met by the remaining capacity of existing allocations of the 2008 Local Plan and committed sites (established land supply). This draft proposed Plan identifies housing land for an additional 7,067 homes (p65-66). Based on reasonable assumptions of rates of development this, together with the established housing land supply, will provide in total at least 10% generosity within the first plan period to 2019 and at least 20% generosity across the total plan period to 2024.

Local Development Plan Objectives

- 3.10 The objectives of the LDP derived from all of the above context are:
- to promote sustainable development
 - help grow the economy, increase housing supply and reduce inequalities
 - protect and enhance East Lothian's high quality environment and special identity
 - ensure adequate infrastructure capacity and appropriate use of infrastructure and resources
- 3.11 The recommended **Compact Growth strategy**, with a primary focus on the main settlements in the west of the SDA, relates positively to the evidence base including sustainability and climate change mitigation and adaptation, accessibility, housing market and existing infrastructure provision (A Spatial Strategy for East Lothian, P11).
- 3.12 The **sites and proposals** to support the Compact Growth strategy are described and mapped by cluster (based on secondary school catchments) with housing and employment land sites summarised in

Tables EMP1 and HOU1 (Growing our Economy and Communities, p61-62, 65-66).

- 3.13 **Policies and proposals** for delivering and managing the Compact Growth strategy are set out across chapters on Infrastructure and Resources (p87), Diverse Countryside and Coastal Areas (p109), Our Natural and Cultural Heritage (p116), Design (p128) and Delivery (p139). These include proposed new policies (e.g. Countryside Around Towns, Green Network) and proposed revisions of significance to existing policies (e.g. Development in countryside and coastal areas).
- 3.14 Whilst commending the Compact Growth strategy, Officers acknowledge those **infrastructure** constraints which exist in the west of the SDA, particularly around education capacity, transportation and air quality issues. However, the level of growth of required of East Lothian would have such impacts wherever large scale development is sited.
- 3.15 Further technical work based on agreed strategy, sites and policies will allow the completion of this to assess cumulative impacts, allow identification of interventions to mitigate these and allow a baseline costing of required mitigation.
- 3.16 Deliverability of the housing numbers required is predicated on maximising the use of existing infrastructure whilst adopting a spatial strategy that supports provision of additional infrastructure through viable development opportunities.
- 3.17 It is the role of the LDP to identify where the provision of additional capacity or new facilities/infrastructure will be required and to ensure that developers contribute towards these where appropriate. On conclusion of technical work to assess cumulative impacts and identify and cost mitigation interventions within an action programme, Supplementary Guidance on planning obligations will be developed to complete the policy position (p137).

Strategy

- 3.18 The Compact Growth strategy seeks to maximise the use of existing infrastructure capacity in the west of East Lothian rather than require provision of infrastructure elsewhere. Similarly it seeks to locate development where public transport can serve it best in relation to existing bus services and also rail halts to encourage shifts from private car usage. It concentrates a significant level of development in the strongest, western housing sub market area of East Lothian, around Musselburgh, Wallyford and Tranent. These factors coalesce as evidence for the Compact Growth strategy to minimise environmental impacts and promote reduction in travel and in travel distances as a more sustainable development pattern.

Musselburgh, Wallyford and Whitecraig

- 3.19 There are significant housing land allocations recommended at Craighall, Goshen and Whitecraig in addition to the existing allocation at Wallyford

and a further allocation at Pinkie Mains. Smaller sites are allocated Levenhall, Edenhall, Barbachlaw and Old Craighall. For the longer term land Drummohr and at Dolphingstone Farm (South) is safeguarded for housing land. Significant employment land is allocated at Craighall to take advantage of proximity to QMU and good road and rail links.

- 3.20 The allocations now proposed comprise 3089 houses and 65 hectares of employment land.
- 3.21 The most significant implication of the Compact Strategy and related sites in this cluster is for education provision, particularly for secondary school capacity. This requires consideration from a land use planning perspective of the location of secondary education provision for Musselburgh, Wallyford and Whitecraig. This has related implications for feeder primary schools including new and/or expanded primary schools.
- 3.22 The draft proposed Plan recommends a new secondary school establishment at Goshen as the most appropriate location for whichever type of secondary school provision the Council in its capacity as Education Authority decides is the most appropriate solution. In respect of its technical merits including location and accessibility this site is considered the most suitable site to provide for the growing community. Primary schools require to be provided at Wallyford, Craighall and Goshen, whilst Whitecraig Primary requires to be expanded.
- 3.23 A further significant implication is for road and other transport interventions to alleviate capacity issues on the strategic road network and congestion and air quality issues in Musselburgh. These in particular require completion of further technical work on cumulative impacts to establish the required locations and levels of intervention, design of mitigation measures and costings of these infrastructure solutions.
- 3.24 Redefinition of Green Belt boundaries will be required together with a strategic approach to ensuring those boundaries remain robust and maintain sufficient separation between settlements.

Prestonpans, Cockenzie, Port Seton, Longniddry

- 3.25 A significant housing allocation and a future safeguard for further housing development are made at Longniddry and the Plan recognises opportunities for employment and community uses within this.
- 3.26 The former power station site at Cockenzie is a substantive employment opportunity remaining subject to the safeguards of the Scottish Government's NPF3 for thermal generation and other potential energy related development if land is available. Given the position of Scottish Power that it does not wish to implement its existing consent for thermal generation on the site the Plan allows for consideration of other uses on the site subject to a review of NPF3 as regards the Cockenzie site's status as a national development and the safeguards for specific use of it. Should this be the case then Supplementary Guidance would be prepared to guide redevelopment of the site.

- 3.27 On 3 November the Planning Committee resolved to grant planning permission in principle for housing development and cemetery use on land at Dolphingstone Farm (North) to the west of Prestonpans and consideration must now be given to that site as part of a finalised Proposed Plan.
- 3.28 The allocations now proposed comprise 450 houses at Longniddry. Dolphingstone Farm (North) is minded to be approved for up to 160 units. The safeguard at Cockenzie is some 88 hectares.
- 3.29 As with the other clusters, finalisation of technical work based on the Proposed Plan sites will allow definition of required infrastructure provision, however, there is capability to provide school capacity to serve allocated housing development.
- 3.30 Green Belt and Countryside Around Towns designations are used to manage growth and the setting of the settlement.

Blindwells

- 3.31 The existing allocation of land at Blindwells for a settlement of some 1600 homes with 10 hectares of employment land and a mixed use centre with schools and community facilities with west to east phasing of development is maintained. Strategic road network interventions are required together with safeguarding of the existing rail halt.
- 3.32 Land to the east of the existing allocation is safeguarded for a significant eastward expansion of Blindwells new settlement. This could potentially accommodate significant strategic development as needed and help minimise the impact of any future strategic housing land requirements on existing East Lothian settlements. Major infrastructure requirements for this would require to be addressed through innovative delivery mechanisms.

Tranent, Macmerry, Ormiston, Pencaitland, Elphinstone, Gladsmuir, Humble, East Saltoun

- 3.33 Significant housing allocations are made at the south of Windygoul, Tranent, also at Lammermoor Terrace and Bankpark Grove and in each of the cluster villages. Employment land allocations are made at the west of land to the south of Windygoul, at Kingslaw and at Macmerry Business Park.
- 3.34 The allocations now proposed comprise 1351 homes and 23.6 hectares of employment land.
- 3.35 The housing allocation south of Windygoul allows for allocation of land required for the expansion of Windygoul Primary School to accommodate pupils from new development in this catchment. There is capability for expansion of Ross High and the other cluster primary schools as needed.

- 3.36 In addition to the considerations of the strategic road network, interventions in the local road network and particularly Tranent High Street require to be identified through further technical work, to mitigate the impacts of development.
- 3.37 Green Belt and Countryside Around Towns designations are used to manage growth and the settings of the settlements.

Haddington

- 3.38 Additional housing land is identified at the Letham Mains and Dovecot sites. The planning permissions at Dovecot, Gateside and Alderston (Aberlady Road) are allocated. Land at Peppercraig East is allocated for employment.
- 3.39 The allocations now proposed comprise 748 homes (including grants of planning permission at Gateside, Dovecot and Alderston) and 12.3 hectares of employment land.
- 3.40 Interventions required for the strategic and local network capacity will be defined by final technical work. Education capacity will be subject to required developer contributions. The proposed new Community Hospital at the existing Roodlands Hospital site is the subject of a planning application currently under consideration.
- 3.41 Countryside Around Towns designations are used to manage growth and the settings of the settlements.

Dunbar, East Linton, Innerwick, Spott

- 3.42 The existing allocation at Hallhill is the focus for strategic growth, with additional allocation at Hallhill North for housing and for expansion of the existing primary school campus as required. Housing land is also allocated at Newtonlees at the east of Dunbar and at Beveridge Road, West Barns, the latter to reflect the existing grant of planning permission in principle. Significant allocation for housing is made at land at Pencraig Hill, East Linton and small sites at Spott and Innerwick. The employment land allocation at Spott Road is maintained subject to modification to reflect past planning permissions.
- 3.43 The allocations now proposed comprise 764 homes (including grant of planning permission in principle at Beveridge Row) and 1 hectare of employment land.
- 3.44 Land at the former East Linton Rail Station is safeguarded for a new rail station and associated parking provision. Required interventions to the strategic and local road networks will be modelled in the final technical work to be carried out. Pedestrian and cycle links, including underpass links are required to enhance the linkages between the north and south of the town. Education provision will be subject to required developer contributions.

- 3.45 Countryside Around Towns designations are used to manage growth and the settings of the settlements.

North Berwick, Gullane, Dirleton, Aberlady

- 3.46 The existing allocation at Mains Farm is the focus for strategic growth, with allocation at Tantallon Road for further mixed use development and at Ferrygate for housing to reflect the minded to grant planning permission in principle decision for the appeal relating to that site. There are allocations at Gullane (former Fire Training College site, Fentoun Gait, Salcoats), Castlemains Dirleton and west Aberlady.
- 3.47 The allocations now proposed comprise 665 homes (including the sites at Ferrygate and Tantallon Road, North Berwick and 1 hectare of employment land.
- 3.48 In addition to strategic road network impacts, completion of technical work will address issues of the local road network and town centre traffic and parking. The existing safeguard of land for expansion of the education campuses is maintained.
- 3.49 Countryside Around Towns designations are made to manage growth and the settings of the settlements.

Policy

- 3.50 Policy review for the draft proposed Plan reflects the most recent revision of SPP and policies of the SDP. The most significant changes are set out below.

Town centres

- 3.51 The 'Town centre first' principle requires that retail, commercial, leisure, office and other development that would attract significant footfall be subject to a sequential test in relation to town centre, edge of centre or local centre, other commercial centre or accessible out of centre locations (Policy TC1 p58).

Employment

- 3.52 Business and employment locations are supported for uses within Classes 4 (office/light industrial), Class 5 (general industry) and Class 6 (storage and distribution), and other employment generating uses may be supported subject to the town centre first principle (Policy EMP1 p60).

Housing

- 3.53 Housing land policy reflects SPP and SDP requirements to maintain an adequate 5 year effective housing land supply. Policy HOU1 provides for this and includes criteria for sites should a need emerge (p69).

Policies for affordable housing take account of council priorities on delivery of affordable housing and the range of tenures which are

considered to contribute to the affordable housing supply (HOU2, HOU3 p70-71).

Policy HOU7 sets out criteria for the consideration and assessment of gypsy/travellers sites (p73).

Open space/Amenity

- 3.54 Policies OS5 and OS7 respectively provide for developer contributions or other provision to burial space and allotments (p84-85).

Transportation, digital and other networks

- 3.55 Policies reflect the need to support active modes of travel and encourage walking and cycling and public transport use over car use where possible. Policies T4, T6 and T8 support these modal shifts, with expectations on developers to incorporate appropriate infrastructure, design principles and contributions for active travel corridors (including the green network) and bus network improvements (p89-91).

Strategies for town centre parking, reduced speed road safety zones and electric vehicle charging points will support town centres and more sustainable transport choices (Policies T16, T17, T18 p93).

Continued support is given for new connectivity and enhancement of digital networks (Policy DCN1 p94).

Policies SEH1 and SEH2 respectively support sustainable energy and heat and low and zero carbon proposals including heat networks and appropriate generating technologies (p97).

Policies WD1-6 set out the criteria for all scales of wind energy development, together with a spatial framework for wind farms in response to SPP (p98-102).

Minerals

- 3.56 Minerals policies have been updated to reflect national and strategic policy requirements for avoidance of sterilisation of mineral deposits where they are commercially viable. Extraction of minerals, including proposals for onshore oil or gas will only be supported where they meet strict environmental and amenity considerations and meet all development plan policy requirements (Policies MIN1-10 p109-112).

Countryside and Coast

- 3.57 Countryside and coastal policies consider the diversity of countryside and coast of East Lothian. Policies support rural diversification, conversion of existing buildings to housing, replacement dwellings where appropriate in particular circumstances, new build housing where it is demonstrated it is required in relation to rural business need and, exceptionally, enabling development to secure appropriate, beneficial primary uses or heritage outcomes (Policies DC1-5 p113-116).

Policies DC8 and DC9 provide for Countryside Around Towns and Special Landscape Areas respectively. They set out the criteria where development may be supported in such sensitive landscape areas, to protect the settings of towns and areas of high landscape value from inappropriate development (p118).

SPP provision for green networks to support active travel and recreation opportunities is reflected in Policy DC10 (p119)

Natural and Cultural Heritage

- 3.58 New policies provide for protection of special geological features and high quality soils, including peat, respond to national policies and strategies for these resources (Policies NH6 and NH7 p122-123).

Design

- 3.59 Design policies continue the provisions of the previous plan with minor amendments (Policies DP1-DP9 p132-136).

Delivery

- 3.60 Infrastructure delivery and the planning obligations regime are under review by the Scottish Government at this time. Policy DEL1 provides scope to consider any changes which may emerge from this review through Supplementary Guidance on Developer Contributions. The Policy sets out the type of proposals from which such contributions would be sought. The LDP, supporting Action Programme and Supplementary Guidance will identify where there are requirements for infrastructure, including community infrastructure, though requirements may not be limited to those items set out in those documents (p137-138 and Education, Community and Health and Social Care Facilities p74-80).

4 POLICY IMPLICATIONS

- 4.1 The strategy, sites and policies of the Local Development Plan will have a significant bearing over the coming 10 years on where development in East Lothian is located and how it is managed.

5 EQUALITIES IMPACT ASSESSMENT

- 5.1 The finalised Proposed Plan will be subject to an Equalities Impact Assessment.

6 RESOURCE IMPLICATIONS

- 6.1 Financial – The growth resulting from the implementation of the adopted Local Development Plan will have significant implications for the Council

and its wider Community Planning partners in respect of financial and other strategic plans. As stated in paragraph 3.16 the LDP will identify where the provision of additional capacity or new facilities/infrastructure is required so as to ensure that developers contribute towards these where appropriate. Conclusions of the technical work to assess cumulative impacts and identify and cost mitigation interventions will be incorporated in the LDP as an action programme, with Supplementary Guidance on planning obligations developed to complete the policy position. Council will need to maximise receipt of required developer contributions, government grants and other contributions to accommodate its own commitments within both capital and revenue forward planning.

6.2 Personnel - Staff time and input required for completion of technical work on a service by service basis, to ensure all service requirements which can be met through developer contributions are addressed.

6.3 Other – None

INTRODUCTION

The Development Plan

- 1.1 Planning authorities are required to prepare a **Development Plan** to set out a planning strategy and policies to guide the future development of their area. The Development Plan explains where new developments such as housing, business and retail are likely to be supported and where certain types of development should not occur. It provides a framework against which development proposals can be prepared and assessed.

East Lothian's Development Plan

- 1.2 The Development Plan for East Lothian has two components: the first part is the high level **Strategic Development Plan (SDP)** for Edinburgh and South East Scotland, which is prepared by SESplan¹ and approved by Scottish Ministers; the second part is this **Local Development Plan (LDP)**, which has been prepared by East Lothian Council. By law, this LDP must conform to SESplan's first Strategic Development Plan (June 2013).
- 1.3 The SDP sets out the broad strategic planning vision, strategy and policies as well as development requirements for the city region, including East Lothian. It was approved with modifications by Scottish Ministers on the 27th June 2013. This approval was subject to the preparation of **Supplementary Guidance on Housing Land**, which was adopted as part of the SDP on 28th October 2014. The SDP and its Supplementary Guidance set out specific land requirements to be planned for by LDPs for the periods up to 2019 and 2024. The SDP is also accompanied by an **Action Programme** which identifies actions associated with the delivery of the SDP. Some of these actions are specific to East Lothian while others have cross local authority boundary implications including for East Lothian.
- 1.4 The LDP sets out where and how the SDPs development requirements can be delivered in East Lothian. It is a site specific plan and contains proposals that show where the Council wants to stimulate development as well as policies it will use to manage development in East Lothian. The LDP is supported by topic based **Supplementary Guidance** where policy material would be too detailed for inclusion in the LDP itself. The LDP **Action Programme** sets out actions that will be required to deliver the LDP, including infrastructure provision, and who will be responsible for them. It will be reviewed at least biannually when the LDP is operative to monitor progress towards delivery and to identify any further actions.

Format of this Local Development Plan

- 1.5 The LDP comprises a **Written Statement** and a **Proposals Map** which are to be read together. The Written Statement explains the spatial strategy and sets out detailed policies and proposals. Broadly, the spatial strategy explains the development strategy for the area, including where development is planned, and the policies explain the Council's approach to particular types of development in particular locations, or how development should be designed and perform once complete. The proposals identify sites where development or land use change is proposed, or where land is safeguarded so as not to prejudice a certain type of development occurring or an existing use continuing, or to ensure an area can be considered as a potential future development location.
- 1.6 The Written Statement is presented in topic chapters. It sets out East Lothian's principal physical, social and economic characteristics, and the Plan's vision, aims and objectives. The spatial strategy for East Lothian and for each of its cluster areas is described and illustrated, including the main development proposals. Subsequent chapters set out the Plan's policies and proposals in relation to growing our communities, infrastructure and resources, diverse countryside and coast, natural and cultural heritage, and on design and delivery. Where Supplementary Guidance is intended to form part of the LDP this is clearly indicated in the Written Statement, as is the scope of policy material to be included in the guidance. Some policies or proposals are relevant to the whole plan area irrespective of the type or location of a proposed development.
- 1.7 The Proposals Map illustrates where site specific or area based policies or proposals apply. It is divided in to a series of Inset Maps which allow the plan's spatial policies and proposals to be examined clearly at a larger map scale.
- 1.8 All applications for planning permission will be determined in accordance with the Development Plan, unless material considerations indicate otherwise. It will be for the decision maker to establish which Development Plan policies or proposals are relevant, and the weight to be attached to them, in the specific circumstances of each case.

Review of the Development Plan

- 1.9 The Development Plan should be reviewed at least every five years. This is to update the planning policy and strategy approach and to identify any additional and appropriate land for development. The first stage in this will be a review of SESplan's Strategic Development Plan (June 2013), which will be followed by a review of this Local Development Plan. The stages of and timescales for these review processes are set out in the respective Development Plan Schemes for these plans, which are updated at least annually.

¹ Strategic Development Planning Authority for Edinburgh and South East Scotland (SESplan)

East Lothian: The Place

Spatial Context

1.10 East Lothian is part of the Edinburgh city region. It is located to the east of Edinburgh's suburban edge. East Lothian measures approximately 270 square miles in area, and includes 43 miles of coastline. The area has six main towns and extends from Musselburgh in the west to Dunbar and beyond to the area's administrative boundary with Scottish Borders in the east. Although Musselburgh is the largest town, Haddington is the area administrative centre. To the south are the Lammermuir Hills and to the west are the Midlothian and City of Edinburgh Council areas. The Firth of Forth and East Lothian's attractive coastline are to the north.

Landscape, Natural and Cultural Heritage

1.11 East Lothian has a varied and attractive landscape character comprising countryside and coast with a central agricultural plain framed by the backdrop of the Lammermuir Hills. These features combine to create an environment of considerable interest and quality. It also includes large and generally flat fields that provide long distance views across the countryside and coastal plain and its landmarks to the Lammermuir Hills, the Firth of Forth and beyond. The A1 and the East Coast Main Line pass west to east through the centre of the area with the North Berwick branch line to the north.

1.12 Aberlady, Gullane and Belhaven Bays, together with the beaches along the coastal strip, are attractive landscape features that provide important amenity as well as visitor and leisure tourism attractions. They are also significant habitat resources for protected species and biodiversity of national and international significance. The Firth of Forth shoreline and islands are Special Protection Areas (SPAs), and the inland area to the south is an important feeding ground for protected species. East Lothian has many Sites of Special Scientific Interest (SSSIs), Local Nature Conservation Sites and other areas of natural and cultural heritage value.

1.13 The Tyne and Esk rivers and smaller isolated water courses drain the area. The main water courses and the Biel Water have a history of flooding of agricultural and non-agricultural land. While the quality of the water environment is generally good, there is scope for improvement, particularly because of agricultural run-off or where morphological improvement would be of benefit. Much of the agricultural land in the area is prime quality, and there are carbon rich and rare soils such as peat. There are few locations where further landscape improvement would be beneficial, with most industrial landscape scars from mining in the western coal field rehabilitated. The network of former railway routes is included as part of the area's core path network and they offer access and active travel opportunities for residents and visitors through the countryside and green belt.

1.14 East Lothian has an extensive cultural heritage including listed buildings, conservation areas, scheduled and unscheduled archaeology, designed landscapes and historic battlefields. It played a key role during World Wars I and II through its wartime airfields at East Fortune, Macmerry and Drem. Its history of agricultural improvement has left a legacy of fine rural buildings and a cultivated landscape. The area's settlements established, grew and evolved in this context, whether because of harbours or minerals or the quality of agriculture or environmental constraints. Other settlements located at river crossings or where fast moving water offered energy for industry. Smaller settlements developed around farmsteads, fortifications, parish churches and manses, while some were planned by estates to house workers during agricultural improvement.

1.15 The landscape is interspersed with these historic settlements and features and other prominent physical features such as the Garleton Hills and North Berwick and Traprain Laws. Retaining a setting for them and ensuring appropriate urban edge treatment has helped maintain landscape character and settlement identity. The Edinburgh Green Belt has a role in managing this in the west of the area. However, some areas of green belt land will make a more limited contribution to related objectives considering development plans for adjoining local authority areas. Parts of the green belt are highly accessible by a range of transport modes, including public transport, and adjoin urban areas with regeneration potential. Settlements further east are also near the limit of what can be achieved in the way of expansion without significantly changing their character, setting and identity.

1.16 The diversity of settlements in East Lothian developed in harmony with their surroundings and in response to the area's economic activities and connections to areas around it. This is reflected in the layout of the settlements, their architectural styles and in the indigenous materials used for building. These characteristics and built and natural heritage assets are all integral to East Lothian's sense of place, distinctiveness and identity.

Population & Households

1.17 The 2011 Census indicates that East Lothian's total usually resident population was 99,717, an increase of 10.7% per cent over the equivalent 90,100 figure at 2001. This confirms a trend of steadily increasing population evident since the mid/late 1980's. This is largely as a result of the area's proximity to Edinburgh and because it is part of the wider Edinburgh labour market as well as housing market areas.

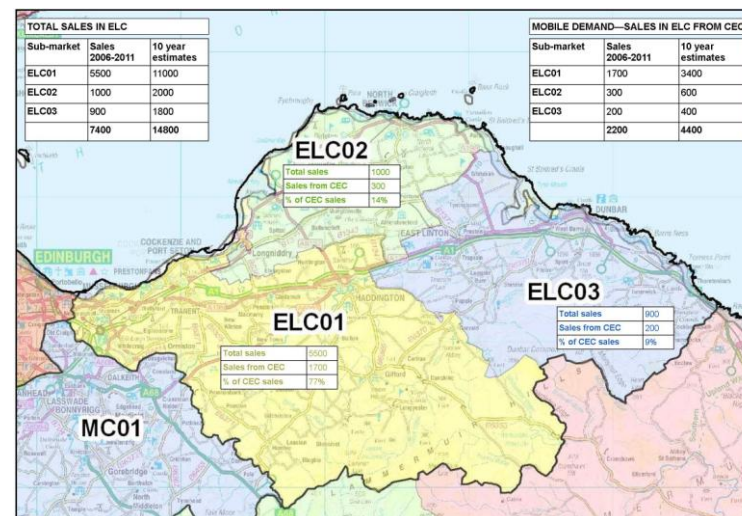

1.18 The 2011 Census indicates that Musselburgh is East Lothian's largest settlement (pop. 19,133 (incl Wallyford 22,264)). Although closest to Edinburgh, Musselburgh had the slowest rate of population growth (7%) between 2001 and 2011 in comparison to the rest of East Lothian (10.7%). The other main settlements in the west of East Lothian are Tranent (11,565), Prestonpans (9,140), Cockenzie / Port Seton (5,545) and Longniddry (2,488). The western part of East Lothian contains more than half of the area's population. Based on 2009 data, the Scottish Indices of Multiple Deprivation (SIMD) shows that parts of Musselburgh, Prestonpans, Tranent and Haddington are among the most deprived 15% in Scotland in relation to one or more of the SIMD indicators of education, health, housing, crime, income or employment. The main towns further east are Haddington (8,978), Dunbar (8,293) and North Berwick (6,455). The settlement pattern in the east is more dispersed than in the west and there are fewer regeneration opportunities.

1.19 The National Records of Scotland 2010 population projection (published 2012) anticipates that by 2035 East Lothian's population will increase by 33% to around 129,229, the highest percentage rate of growth in Scotland during this period. Around 30% of this is expected to be natural change, whereas 70% is expected to be net in-migration. East Lothian is expected to experience the greatest increase in the 0-15 age group in Scotland, with an increase of 38%. The working age population is also expected to increase at the highest rate in Scotland, with growth of 29%. The pensionable age population is expected to increase by 43%, and the number of people aged over 75 is expected to increase by 95%.

1.20 The 2011 Census indicates that East Lothian has 42,910 households. Compared to the Scottish average, East Lothian has a significantly smaller proportion of single person households but a greater proportion of all others. The 2010 household projection indicates that by 2035 there will be a 70% increase in single person households with 33% of all

households being single person. The proportion of other households are anticipated to be 7% with one or more children, 33% with two adult and two or more children, 21% with two or more adults and one or more children and 7% with 3 or more adults.

1.21 In terms of East Lothian's housing market, the area has 3 sub-housing market areas². These are 1) Musselburgh to Haddington in the west; 2) Dunbar and surroundings in the east; and 3) North Berwick and coastal settlements to the north. In the five years between 2006 -2011 a total of around 7,500 house sales took place in East Lothian and around 70% of these occurred in the western sub-market area alone. Additionally, around 75% of all purchasers moving from Edinburgh to East Lothian (mobile demand) bought a home in the western sub-market area. In the same period around 15% of house sales in East Lothian occurred in each of the North Berwick and coastal settlements and Dunbar and surroundings sub-market areas. The scale of mobile demand moving to the eastern and northern sub- market areas is significantly less than in the west, representing around 15% and 10% of all house sales in those sub-market areas respectively.

1.22 This population growth (across all age groups) and household growth will significantly increase need and demand for homes as well as infrastructure, facilities and services such as education, road, rail, public transport as well as health and social care and community services etc. Welfare reform is also likely to result in a need for more smaller affordable homes.

² SESplan Housing Market Area Assessment October 2013

Economy & Town Centres

- 1.23 East Lothian's economy was built on agriculture, fishing, coal mining and manufacturing. Whilst agricultural activity continues throughout the area, reflecting the quality of agricultural land, East Lothian's local economy is diversifying. Small to medium size enterprise is a strength in the area, but when compared to other parts of the region in terms of connections and relative accessibility via national and international modes of transport, East Lothian is currently a less preferential location for attracting large scale economic development and employment opportunities. However, Queen Margaret University to the west of Musselburgh is a real asset and associated spin off opportunities are emerging. Edinburgh College has an aspiration to establish a presence in East Lothian.
- 1.24 The Annual Business Inquiry shows that between 1998 and 2008 the area experienced growth in the service, construction and tourism sectors, but a decline in manufacturing. Between 2008 and 2012 the Annual Business Survey (updated August 2014) indicated there has been increased activity in manufacturing (+4.5%), wholesale and retail trade (+8.4%) and in the tourism sector. Importantly, notwithstanding growth in other sectors, there was a significant decline in construction over the same period (-35%). Out of work benefits issued in the area (Job Seekers Allowance) at 2010 stood at 3.3%, below the Scottish average of 4.3%. The 2006 claimant count showed that the area had a low unemployment rate at 1.7% and ranked 28th out of Scotland's 32 local authority areas at that time, but by 2011 this figure increased to 4.1% and was ranked 17th.
- 1.25 The availability of jobs relative to the population (job density) is lower in East Lothian (0.5) than in other local authority areas and the rest of Scotland (0.78). While many people are attracted to live in East Lothian, around half of its working residents elect to travel out of the area to access the wider range of jobs (often higher value), goods and services on offer elsewhere in the region. This demonstrates the link between the size of the working age population, the availability of jobs, and the commuting travel pattern towards the regional core and the capacity issues in the strategic and local transport network. These issues also manifest in the need for affordable housing and in the limited capacity in public transport services. Vehicle emissions are a key factor in the existence of an Air Quality Management Area at Musselburgh High Street. Air quality is being monitored at Tranent High Street.
- 1.26 Whilst many of the area's residents are highly qualified, there are areas of deprivation, and regeneration opportunities continue to exist particularly in the west of East Lothian. It can be difficult for some residents to access employment and services if they are at distance from them, particularly if they do not have access to good public transport options or to a car. There are significant challenges to bringing about an increase in the job density in the area and realising the associated benefits. Employment land delivery, and thus the

provision of new jobs, is a significant issue. This is particularly so given the projections for increased population / need for housing and because the area is an attractive place to live. These factors influence the availability of land for economic development, including allocated land, because much of it is controlled by those wishing to build homes rather than provide employment opportunities.

- 1.27 East Lothian currently has six main towns and many smaller settlements with their own individual character. The main towns acts as service hubs for the smaller satellite settlements around them and each has its own role in the hierarchy of settlements / centres. The settlements are well consolidated and they have few meaningful remaining urban brownfield re-development opportunities. Many East Lothian town and village centres are historic areas that benefit from a legacy of attractive buildings and spaces that offer a unique trading environment. However, this influences the type and scale of development, including commercial and retail development, that can be accommodated within them and their town centres. The trend towards travelling longer distances (and possibly online retailing) has also influenced shopping habits, impacting on the role, vitality and viability of town centres and the range of amenities available locally. These factors combine to restrict access to amenities and opportunities for some residents and this places them at a disadvantage.

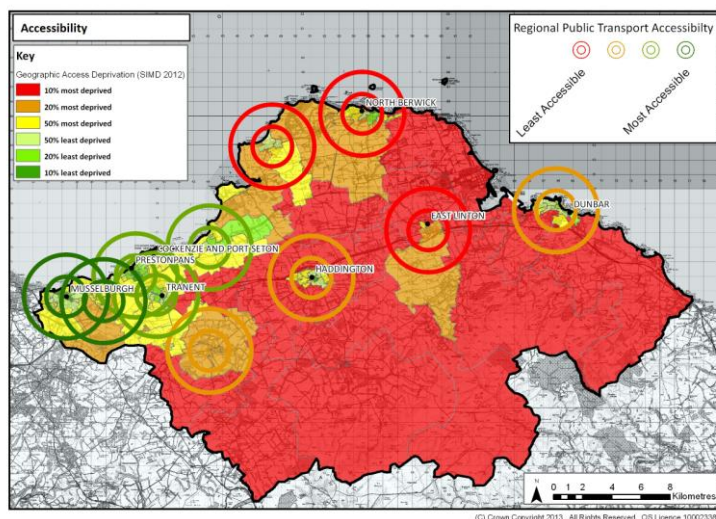

Infrastructure & Resources

Transport

- 1.28 The A1, the East Coast Main Line and the North Berwick Branch Line are East Lothian's main transport corridors. The A1 has a junction with the A720 Edinburgh City Bypass at Old Craighall and a number of interchanges along its length that provide access to settlements, other destinations and routes. The dualling of the A1 Expressway between Haddington and Dunbar has increased accessibility and reduced journey times for road based transport to settlements in the east of East Lothian. However, more could be done to improve cross border connections, including dualling the A1 to the Scotland – England border, which is being considered south of the border.
- 1.29 The west of East Lothian is currently its most accessible part in terms of connections to the wider city region, including via public transport. While East Lothian is relatively well served by the strategic transport network, particularly west / east, there is an underlying problem of limited capacity in transport infrastructure and services. These factors are particularly relevant because travel demand is expected to increase in the coming years, issues that will exist without factoring the impacts of planned growth that is yet to be delivered. Trunk road and local road network capacity is already an issue, particularly in the west of East Lothian. Existing issues have been highlighted at Old Craighall Junction and generally at all

interchanges west of the Gladsmuir Interchange. Strategic issues have also been identified for the local road network, including at Meadowmill Roundabout and at Musselburgh and Tranent High Streets where there are air quality concerns. Limited route options to and from East Lothian and the regional core means road based commuting contributes to amenity and capacity issues in west East Lothian where routes converge.

- 1.30 The rail network through East Lothian currently has limited capacity. Utilisation of the East Coast Main Line affects scheduling for local services on it as well as those from the North Berwick Branch Line. A study has confirmed the potential for another local service, but its introduction is dependent on the operation of the east coast rail franchise. Any confirmed longer term vision for high speed rail on other lines may release additional capacity on the East Coast Main Line. Currently, six rail stations are located on the main line at Musselburgh, Wallyford, Prestonpans, Longniddry, Drem and Dunbar, with North Berwick Station on the branch. There are station safeguards at Musselburgh, and at Blindwells and East Linton. A bid is being progressed by the Council to seek part funding from the Scottish Government to deliver a new station at East Linton. Notwithstanding this, local trains are often full at peak times and while more carriages would help the situation this may require the lengthening of station platforms (particularly in the west of the area due to the cumulative impact of commuting passengers travelling to the regional core) for longer trains as well as the expansion of station car parks.

- 1.31 A route for Tram Line Three adjacent to the proposed Craighall Business Park west of Musselburgh is safeguarded in the City of Edinburgh Council's Second Proposed Local Development Plan (with the potential to be extended further), but little progress has been

made on that project. Commuting bus services are busy at peak times and those to the city are more numerous and frequent in the west of East Lothian than in the east, as Lothian Buses only operate in the west of the area. Local bus services serve the main settlements as well as those in the countryside, and their number, frequency and integration with other public transport modes and are continually being improved. Whilst the Council subsidises bus services, in a deregulated transport system it is limited in what it can do to further assist service provision.

- 1.32 There are also core paths and other routes that provide a network of active travel options within and between settlements, including across local authority boundaries. There is scope for continued extension and improvement of the active travel network, particularly as part of the Green Network, and to better integrate active travel routes with other sustainable modes of travel. This is particularly true where there is scope to access public transport nodes via the active travel network and also in the west of the area where cross local authority boundary active travel could be made more attractive for some commuting journeys. The Council's Local Transport Strategy is aligned with the LDP and both strategies seek to integrate land use and transport, and encourage more sustainable travel choices.

- 1.33 East Lothian's transport network and services are experiencing capacity issues which are compounded in the west by commuting travel patterns from the east causing issues 'down line' in the morning and afternoon peak times. These existing capacity issues have been caused by the cumulative impact of population growth in, and commuting through and from, the area. It is the west of East Lothian that is best served by public transport and where there may be greatest potential for a modal shift to more sustainable modes of transport. Nonetheless, further impacts are anticipated from development planned in East Lothian and in areas around it, requiring the delivery of suitable mitigating interventions.

Education & Community Facilities

- 1.34 East Lothian has been the subject of strategic development pressure for many years. This has resulted in the expansion of settlements and an increase in demand for education and community services, which has impacted on the capacity of facilities. The opportunity to make use of any available capacity in the area's existing facilities, or to provide additional capacity at them, has now been largely utilised. As further demands are placed on the areas facilities and infrastructure it will be essential to ensure that adequate local service provision and infrastructure capacity is maintained. A further increase in capacity at some existing facilities is possible in some locations, but the provision of new facilities will be needed to bring forward further development in most locations. In view of the scale of growth the area has accommodated, the lack of available education capacity is now a very significant issue to be resolved in order to accommodate additional new development. Additional education capacity / facilities at primary and secondary level will be required.

Water & Drainage

- 1.35 There is some available strategic water and drainage capacity in the west of East Lothian, but further capacity in many areas will need to be provided to accommodate additional development. Where capacity is available in strategic assets there has been a preference to utilise it if appropriate as part of the spatial strategy before distributing development to locations where additional capacity would need to be provided. If new strategic capacity is required to bring forward development, it is also necessary to consider how long it will take to deliver it to enable development. In these circumstances, early discussion with Scottish Water to discuss the phasing of development will be required.

Energy & Resources

Energy

- 1.36 East Lothian is home to Torness Nuclear Power Station. Whilst Cockenzie Power Station is no longer operational, there is consent to re-power it to a gas fired power station. There is potential for thermal energy generation and carbon capture and storage at Cockenzie, including the former power station site. Major electricity and gas distribution networks cross East Lothian. Locations on the coastline from Cockenzie to Torness may have potential to service or provide on-shore grid connections to off-shore renewable energy projects.
- 1.37 On shore wind energy development has taken place in East Lothian and a pattern of such development is established. Wind farm development is located in the Lammermuir Hills. It has been set back from the ridgeline, off the northern down slope and away from this and other highly sensitive landscape areas. It has been developed in locations where the landscape provides visual containment. There is now very limited remaining strategic capacity for further wind farm development in the area without significantly harming its character and appearance. Development of individual and small groups of wind turbines has taken place in the lowland areas where it can be accommodated without harming the character of the local area.
- 1.38 There may be potential for heat networks to develop within and also to be extended in to the area. Examples of this are at Craighall and at Oxwellmains (adjacent to sites that have planning permission for energy from waste plants), and potentially at Cockenzie where waste heat from any thermal power station may be utilised. Other renewable energy projects have taken place, including hydro schemes, and there are also consents for solar energy parks within the area but none have yet been implemented.

Resources

- 1.39 East Lothian is underlain by a range of minerals and aggregates. There are a number of hard rock and sand and gravel extractions sites which are operational or have planning permission. The west of the area is underlain by shallow coal and there is also potential shale oil and gas as well as coal bed methane in the west of the area.

Digital Connectivity & Communications

- 1.40 High speed digital networks (240mb and above) are programmed for expansion across almost all of East Lothian by 2018. This means that 90% of properties will be served by this broadband speed and all remaining ones (likely to be in the countryside) are programmed to have at least 2mb provision in the same period.

Summary

- 1.41 East Lothian is part of the Edinburgh city region. It has a relationship with this wider regional area and its settlements and centres, but it also offers something different. East Lothian has wide variety of high quality built and natural environmental capital and, with countryside and coast in the area, an abundance of leisure tourism opportunities. All this is within easy access of Edinburgh and places East Lothian in high demand as a place to live, work, recreate and visit. However, the very characteristics that attract people to East Lothian are also those that are at risk of being lost if new development is not introduced sensitively. Introducing new development to East Lothian in a way that recognises the area's strengths and opportunities while helping to address its weaknesses will help ensure that the future development of the area occurs in a sustainable way.
- 1.42 Overall, significant investment will be required to overcome the transport, education and other infrastructure capacity constraints in the area. This is at a time when the availability of funds restricts the ability to deliver the increased infrastructure capacity that is necessary to deliver growth. Nonetheless, capacity constraints will prevent any further development from being delivered unless and until there is commitment to deliver solutions. Funding commitment will be essential, and developer contributions will have a significant role to play. If funding commitment is in place to allow constraints to be overcome, in some circumstances development may be allowed to proceed before a capacity solution is delivered. However, in some cases the timescale for the provision of infrastructure capacity will impact on when development can occur.

The National, Regional & Local Policy Context

- 1.43 The LDP must conform to the SDP and take account of the National Planning Framework (NPF), Scottish Planning Policy (SPP) and Advice (PANs). Other relevant plans, policies and strategies have also been taken in to account as appropriate.

National Planning Framework & Scottish Planning Policy

- 1.44 NPF3 sets out the long term development strategy for Scotland and identifies National Developments that should be included in development plans. South east Scotland, including East Lothian, is to continue as the driver of the Scottish economy. NPF3 notes a need to deliver land for new homes and to invest in associated infrastructure, including where cross local authority boundary impacts are expected such as on the trunk road network, including the A720 city by-pass. Opportunities for regeneration are to be maximised. The importance of towns in the city region is also recognised.
- 1.45 NPF3 acknowledges that infrastructure capacity in general is a significant issue: in some cases new facilities will be needed, but best use should first be made of existing capacity and facilities where appropriate; innovation and joint working will be needed to secure funding and delivery mechanisms for more capacity. Into the longer term the spatial strategy for the city region will need to acknowledge regional infrastructure constraints.
- 1.46 Key economic sectors to be supported in the city region include financial services, life sciences and universities, food and drink, tourism and energy related development. Cockenzie Power Station has National Development status and the Forth coast to Torness is recognised as a potentially important energy hub. NPF3 recognises the need for infrastructure that allows electricity from off shore wind projects to be connected to the grid. Electricity transmission network infrastructure is also a National Development relevant to East Lothian. In relation to Cockenzie, the LDP is to (i) continue to support its status as a location for non-nuclear baseload electricity generating capacity and associated infrastructure, potentially including facilities for Carbon Capture and Storage (ii) recognise its potential for renewable energy related development as well as (iii) its potential for energy related port development. If competing proposals emerge, those with greatest economic benefits and which make best use of the location's assets are to be prioritised.
- 1.47 NPF3 does not support development of new nuclear power stations, but an extension to the operational life of Torness is not ruled out. The Central Scotland Green Network is also a National Development which is to extend into East Lothian. It is to help maintain the environmental quality of the area and to promote active travel and healthier lifestyles.
- 1.48 The Climate Change (Scotland) Act 2009 promotes an 80% reduction in greenhouse gas emissions by 2050 with a target of at least 42% by 2020. The Town & Country Planning (Scotland) Act 1997 (as amended) requires plans to contribute towards sustainable development, taking account of Scottish Planning Policy (SPP). SPP has two principal policies, one on 'sustainability' and one on 'placemaking'. Due weight is to be given to net economic benefit in planning decisions, and Scottish Government advice on this is awaited. SPP expects plans to be tailored to their area, contribute towards the delivery of economic strategies and Single Outcome Agreements and complement work of the Community Planning Partnership. Placemaking means linking the planning strategy with design tools and other processes and decisions to achieve positive, design-led outcomes on the ground that help create better places. SPP also contains subject policies on matters such as natural and cultural heritage, rural development and coastal planning, and on town centres, business and employment and housing as well as energy, resources and infrastructure.

The Strategic Development Plan (SESplan)

- 1.49 The SDP sets out a spatial strategy which broadly continues that of previous plans. The SDP is clear that land allocations made by previous plans are to be carried forward and must be complemented and not undermined by land allocations made by LDPs. The SDP identifies Strategic Development Areas (SDAs) to prioritise as locations to accommodate the SDPs housing and employment land requirements. The East Coast SDA follows the key transport corridor of the A1 and East Coast railway line from Musselburgh to Dunbar.
- 1.50 The SDP sets an overall housing land requirement for the SESplan area of 107,545 homes up to 2024. To meet this total, land capable of delivering 74,835 homes is to be available in the short term up to 2019, with land for a further 32,710 homes to be available in the medium term up to 2024. The distribution of this housing land across the city region has been confirmed by Ministerial approval of SESplan's Supplementary Guidance on Housing Land. Of this regional total, SESplan's Supplementary Guidance on Housing Land identifies that, for East Lothian, land capable of delivering 10,050 homes will be needed up to 2024, with an interim requirement for land capable of delivering 6,250 homes up to 2019. An adequate five year effective housing land supply is to be maintained at all times.
- 1.51 A further requirement of the SDP is to maintain 76 hectares of employment land in East Lothian. It identifies four strategic employment locations in the area where employment land is to be provided. These are at Craighall, Macmerry, Blindwells and at Spott Road Dunbar. The SDP establishes a policy framework on matters such as employment, housing, town centres and retailing, minerals, energy and waste, transportation and infrastructure, water and flooding, and on green belts, countryside around towns and green networks. The LDP must conform to the strategy, development requirements and policies of the SDP.

The Council Plan, Single Outcome Agreement and other relevant Plans Policies and Strategies

1.52 The Council's overall aim, expanded upon in the Council Plan 2012 - 2017, is to create a prosperous, safe and sustainable East Lothian that will allow its people and communities to flourish³. The Council Plan has four objectives, namely to grow:

1. our economy;
2. our communities;
3. our people; and
4. the capacity of our Council.

The outcomes that the Council would wish to achieve stem from the Council Plan aims and objectives and are reflected in the Single Outcome Agreement⁴ 2013 – 2023, prepared by the East Lothian Partnership.

1.53 The Partnerships statement of intent is that “we will work in partnership to build an East Lothian where everyone has the opportunity to lead a fulfilling life and which contributes to a fair and sustainable future”. The Partnerships overarching priority is to reduce inequalities both within and between East Lothian's communities. To work towards this strategic objective the Partnership has set 10 outcomes which it would wish to achieve. The ability of the LDP to contribute to the outcomes is highlighted in the following section on the Vision, Aims, and Objectives for the LDP.

1.54 The Council's Economic Development Strategy⁵ 2012 – 2022 identifies the strengths which East Lothian has and can exploit to maximise its sustainable economic competitiveness. It recognises many of the opportunities and challenges facing the area as highlighted in the previous section on East Lothian: The Place. The Council's Local Housing Strategy 2012 - 2017 is approved. It highlights, amongst many other issues, a significant need for additional housing, including affordable housing. It is being refreshed in parallel with the LDP for the period 2017-23. Along with the LDP, the LHS will reflect the overall position as regards the SDPs Housing Land Requirements and the significant need for a range of affordable housing types, sizes and tenures to help deliver positive outcomes.

1.55 SEStran's Regional Transport Strategy (2015 – 2025) was approved by Scottish Ministers in July 2015. East Lothian's Local Transport Strategy 2017 is being developed in parallel with the LDP. There are a range of other plans, policies and strategies to which this LDP has regard. These include the Council's Draft Open Space and Sports Pitch Strategy, its

³ Council Plan 2012-2017, East Lothian Council

⁴ Single Outcome Agreement 2013 - 2023, East Lothian Council

⁵ Economic Strategy 2012 – 2022, East Lothian Council

Biodiversity Action Plan and its Core Path Plan. Adjoining planning authorities have been consulted in the preparation of the LDP and account has been taken of their emerging LDPs. Cross boundary opportunities and constraints have also been explored.

1.56 The Scottish Government published the National Marine Plan in March 2015. It is consistent with SPP and NPF3 and provides for National Developments and for integration with other plans, including River Basin Management Plans. Marine plans and development plans are to be compatible. Regional Marine Plans will be adopted by Scottish Ministers, compatible with the national plan and will be prepared by Marine Planning Partnerships. Partnerships will not issue marine licenses or consents, but will be consulted on them. East Lothian is adjacent to the Forth and Tay marine region. The responsibilities of planning and marine authorities overlap in the intertidal zone and there may be a need for both marine licences and planning permission. Any public body taking authorisation or enforcement decisions or any decision that will or may affect the Scottish or UK marine areas must do so in accordance with the UK Marine Policy Statement, the National Marine Plan and any regional marine plan once adopted, unless relevant considerations indicate otherwise. The effect of terrestrial planning applications or enforcement action should be considered in this way. Early dialogue between applicants and authorities is essential, including where multi-regime consents are needed and to co-ordinate any environmental assessment.

1.57 For planning purposes the Zero Waste Plan constitutes the National Waste Management Plan along with NPF3, SPP, PANs and SEPA waste data sources, including Waste Data Digests and Waste Infrastructure Maps and Thermal Treatment of Waste Guidelines 2009. River Basin Management Plans for Scotland are in place. Flood risk management plans are due to be published by 2016, and this Plan has been informed by a strategic Flood Risk Assessment. Related considerations of these plans, policies and strategies are reflected in the LDP as relevant. The European Directive on the control of major accident hazards involving dangerous substances has been taken in to account by the LDP, including through controls on the siting of new establishments, modifications to existing establishments and new developments (transport links, residential areas, etc.) in the vicinity of existing establishments. There is a need to ensure that appropriate distances are maintained or created between establishments and residential areas. There are a number of gas pipelines throughout East Lothian as well as Torness Nuclear Power Station and LDP policies address related issues.

1.58 Other relevant plans, policies and strategies are reflected in the LDP as appropriate and required. The full range of plans, policies and strategies that have been taken in to account as relevant to the Strategic Environmental Assessment (SEA) process are highlighted in the Environmental Report which has been published alongside this LDP. Consideration of these plans, policies and strategies has helped shape the aims and objectives for as well as the spatial strategy, policies and proposals of the LDP.

Vision, Aims, Objectives & Outcomes

Development Plan Vision

1.59 Being a part of the Edinburgh City Region the planning vision for East Lothian has already been set by SESplan's SDP, namely that:

“By 2032, the Edinburgh City Region is a healthier, more prosperous and sustainable place which continues to be internationally recognised as an outstanding area in which to live, work and do business.”

1.60 This vision statement is relevant to East Lothian and the way in which it will be interpreted and applied in the area is reflected in the strategy, proposals and policies of this LDP.

Aims, Objectives & Outcomes

1.61 The following are the aims and objectives of the LDP, taking into account those Council Plan objectives that are directly relevant to land use planning. In addition, the references in brackets indicate which of the ELCP Single Outcome Agreement outcomes the aim or objective supports:

Aims and Strategy Drivers [SOA: 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10]

1. To recognise that East Lothian is part of the wider city region and has a significant role to play in accommodating and providing for the city region's, as well as its own, economic, population and household growth, while safeguarding assets that are irreplaceable and facilitating change in a sustainable way;
2. To identify locations where development of different types associated with these aims can take place, where relevant within the appropriate timescales, as well as where certain types of development should not occur;
3. To provide an appropriate framework of policies and proposals that promote and manage development in the area towards these aims whilst securing the right development in the right place and that do not allow development at any cost.

Objectives & Outcomes

Promote sustainable development [SOA: 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10]

- To ensure that new development, and the locations where and the way in which it is delivered, contributes to climate change and regeneration objectives, including reducing inequalities, the need to travel, green house gas emissions as well as energy consumption and waste, and to provide for appropriate renewable energy generation opportunities;
- To make efficient use of land, buildings and infrastructure, prioritising the development of previously developed land over greenfield land where appropriate, while recognising that the nature of East Lothian and scale of strategic development requirements will likely require significant amounts of greenfield land, including prime quality agricultural land, to be used;
- To integrate land use and transport by selecting locations for new development that help to minimise the need to travel and that are well-served by a range of transport modes, particularly public transport and active travel opportunities, including the development of a multifunctional green network in the area, and to help reduce CO₂ emissions;

Help grow the economy, increase housing supply and reduce inequalities [SOA: 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10]

- To meet economic and housing land requirements in appropriate marketable locations so new housing, including affordable housing, and opportunities for economic growth and job creation can be delivered;
- In so doing, to promote regeneration and the creation of mixed communities which provide opportunities for employment and housing, including affordable homes, and areas for leisure and recreation and other services and amenities locally, recognising the town centres first principle;
- To recognise the important role that town and local centres and other mixed use areas have in providing services locally and to protect them from inappropriate development while identifying where and how appropriate new beneficial development opportunities may be realised;
- To encourage the diversification of the rural economy by supporting appropriate economic development and tourism, while recognising the pressures the area is under for new housing development, and to maximise the re-use of appropriate traditional buildings;

Protect and enhance the area's high quality environment and its special identity [SOA: 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10]

- To ensure that new development respects the character, appearance and amenity of the area, including its settlements and their settings;
- To ensure a strategic approach to managing landscape change when accommodating new development, including delivering green network measures with new development, and by avoiding inappropriate development in locations where this is important to protect the character, setting and identity of the local area;
- To ensure that the area's significant international, national and local cultural and natural heritage assets, including green network assets, are protected and conserved, and where appropriate enhanced, including biodiversity, flora and fauna as well as soil, water and air quality;
- To direct development, particularly vulnerable uses, away from areas of flood risk to appropriate locations, and to design new development so it will be resilient to the effects of climate change and helps to reduce or avoid flood risk;
- To ensure that the design of new development reflects the sense of place and identity of the local area, and is properly integrated with its surroundings in terms of movement as well as form, appearance and use of materials, while contributing to wider sustainability and place making objectives;

Ensure adequate infrastructure capacity and an appropriate use of resources [SOA: 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10]

- To ensure that all new development is capable of being served by available infrastructure capacity, or that additional capacity will be provided to allow the development to take place, while maintaining appropriate levels of service;
- To make use of existing and promote the expansion of digital networks throughout the area;
- To minimise energy consumption, safeguard mineral deposits where appropriate and reduce waste arisings.

A SPATIAL STRATEGY FOR EAST LOTHIAN

- 2.1 Change will need to occur in East Lothian to accommodate the requirements of the SDP. It is important that change is managed positively and guided by the principles of sustainable development, greenhouse gas emissions reduction and the vision, aims and objectives for this Plan. This Plan prioritises the East Coast Strategic Development Area (SDA) as the location to meet the SDPs requirements. Development sites are identified by this Plan to provide sustainable locations for development. Environmental and infrastructure opportunities and constraints and the resources available to implement the strategy have been taken into account. The main proposals of the LDP spatial strategy are identified on the Main Strategy Diagram and on the separate diagrams for each cluster area or chapter.
- 2.2 A key consideration is how the spatial strategy contributes to placemaking objectives at the strategic and site specific level. It makes provision as relevant for the expectations of higher level plans, policies and strategies, such the NPF, SPP and the SDP. It also reflects important local considerations and promotes a pattern of development that will allow the area to move towards the aspirations set out in the Council Plan as well as the Single Outcome Agreement. These wider policies and East Lothian's principal social, economic, environmental and physical characteristics have shaped the long term spatial strategy of this land use plan for the area, which seeks to help make East Lothian a better place for future generations. The spatial strategy is supported by Design Frameworks and Development Briefs that set out local area or site specific placemaking objectives.
- 2.3 The spatial strategy is a compact one, as it focuses the majority of new development in the west of East Lothian. This is where the best opportunities are to locate new housing and economic development in the most accessible part of the area. Appropriate development sites that are or can be integrated with sustainable transport options are allocated. This is so new development will have good access via sustainable transport modes to existing or new employment locations or community facilities that are or will become available locally and regionally. This will help minimise the need to travel by car as well as travel distances and associated CO₂ emissions. The sites selected also provide opportunities to further the regeneration of communities in East Lothian's former western coal field. However, not all new development is to be located in the west of the area. Some additional development has been distributed further east. This is in recognition of the need and demand for new homes and economic development opportunities in other appropriate and accessible parts of East Lothian where local service provision and sustainable transport options are good.
- 2.4 As such, the strategy consolidates the existing distribution of population and households in the area. It reflects that East Lothian is part of the wider Edinburgh labour market area and that the likelihood of delivering large scale economic development opportunities reduces as distance from the regional core increases. It acknowledges how the housing market operates across and within East Lothian. The west of the area is where there is likely to be the greatest need and demand for new homes, including affordable homes, taking in to account population distribution and mobile housing demand. It is also most likely that in the west of the area new housing can be delivered in the significant volumes expected, especially since mobile demand dissipates as distance from the regional core increases.
- 2.5 Careful consideration has been given to environmental and infrastructure opportunities and constraints in the area and if, where, how and when constraints can be overcome and by whom. Development in the west of the area will maximise the use of existing public transport options, minimise journey times and distances and encourage active travel to the regional core. This will encourage less private car use and minimise the associated road network capacity, air quality and CO₂ emissions issues. In this context, the sites selected to be part of the strategy make use of existing infrastructure capacity or are in locations and of a scale that justifies provision of new infrastructure. The compact strategy brings a need for focused interventions and creates economies of scale. Decisions on where to locate new development and provide new education facilities seek to support regeneration and an appropriate sustainable pattern and phasing of development. As key allocated sites in the Musselburgh area are developed they will support the delivery of the transformational secondary education capacity solution that is required to deliver the SDPs housing land requirements for East Lothian. In parts of East Lothian where population and development is more dispersed, such transformational solutions are more difficult to identify and justify.
- 2.6 The spatial strategy reinforces the existing compact settlement pattern in the west of the area and complements the more dispersed settlement pattern in the east. The form and structure of settlements as well as the boundaries of the green belt will need to change to deliver new development in the most appropriate way. However, the selective changes to the green belt will be mitigated by the introduction of a Green Network to East Lothian. It will introduce woodland planting and will be used to provide a setting for settlements as well as enhance opportunities for leisure and recreation around them. The Green Network will also be used to safeguard and link important open spaces and natural habitats, and to improve opportunities for active travel within and beyond East Lothian. It complements the compact spatial strategy and will be an important mitigating factor which could help improve community health and well-being. The Green Network will extend across all of East Lothian and will be integrated with the countryside and settlements further east.
- 2.7 This strategic approach to managing landscape change combined with resisting some types and scales of development in the most sensitive locations will help conserve the character and appearance of the area. Another important factor will be ensuring that development sites are designed and delivered in an appropriate way and contribute to or provide infrastructure and Green Network mitigation. Whilst settlements in the west of the area have the green belt to protect their setting and identity, those further east are also near the limit of what can be achieved in the way of their expansion without significantly undermining their character and setting. Consequently, Countryside Around Town areas

are introduced to protect the character and setting of settlements and local areas beyond the green belt from certain types and scales of development. Green belt and Countryside Around Town areas are also opportunities for Green Network provision. As with the green belt, the extent of Countryside Around Town areas will be reviewed with this LDP.

2.8 East Lothian's six main towns and smaller settlements have their own distinct identity and character. Their historic character means they are well consolidated with few remaining meaningful urban brownfield re-development opportunities. This means a significant amount of greenfield and prime quality agricultural land has been allocated to meet the SDPs requirements. Expansion of existing settlements is promoted where infrastructure solutions have been found and where landscape capacity allows. However, the historic form, character and appearance of existing settlements together with other key factors, such as accessibility and environmental and infrastructure constraints, means the scope for further strategic expansion of existing settlements in future LDPs is likely to be limited.

2.9 Blindwells new settlement is a large scale development opportunity. The current mixed use allocation including circa 1,600 homes, 10 hectares of employment land and a new local centre prioritises the reuse of previously developed land with degraded landscape character. In future the Council has a vision to expand the new settlement further east to a size of around 6,000 homes with more employment land and other mixed land uses including a sub-regional town centre. This Plan safeguards a potential Blindwells Expansion Area. However, an appropriate comprehensive solution that could deliver the Council's vision for a larger single new settlement at Blindwells has not yet been found and this will continue to be sought during the life of this Plan. If such a solution is found, it will be set out in Supplementary Guidance that if adopted by the Council would lift the safeguard designation and provide the context to allow an appropriate proposal for a single larger new settlement to be developed. Finding an appropriate comprehensive solution with an appropriate phasing and timing of development, infrastructure, services and facilities will be essential if expansion beyond the current allocation is to be justified.

2.10 The main towns act as service hubs for the smaller satellite settlements around them, and each has its own role in the hierarchy of settlements / centres. Their historic nature influences the type and scale of development, including commercial and retail development, which can be accommodated in their town centres. Consolidating the main settlements and modestly growing appropriate smaller ones will help reinforce the vibrancy and vitality of their town or local centres or mixed use areas, and help ensure continued local access to services and facilities. However, many people from East Lothian travel to shop at other settlements and centres elsewhere in the city region. The strategy identifies that proposals for land uses that generate significant footfall will be best located by following the town centre first principle. If the Council adopts an appropriate comprehensive solution to deliver a larger new settlement at Blindwells, it will include a new sub-regional town centre for East Lothian.

2.11 Into the longer term, environmental and infrastructure constraints in the west of East Lothian are expected to result from the implementation of the compact spatial strategy. In future these constraints may dictate that settlements in the east of East Lothian need to play a more prominent role as part of a more dispersed spatial strategy: there may also be a need to consider if more than one new settlement in the area is required. Confirmation of any longer term spatial strategy will be dependent on the scale and nature of any future strategic development requirements. Notwithstanding this, land has been safeguarded by this LDP so as not to prejudice the Council's consideration of potential future development locations. Investors may also choose to explore with service and infrastructure providers if and how such locations may be brought forward for development under a future LDP.

2.12 Alongside the need to plan for housing and economic development and attractive settlements with vibrant cores and high standards of amenity, there is also a need to support appropriate development that enables East Lothian's countryside and coastal areas to thrive and diversify. This Plan provides clear policy support for appropriate development that is suitable in different countryside or coastal locations to support associated economic activities and way of life. However, the policy approach to such areas also acknowledges the special characteristics of the area as a whole and the pressure it faces for development. There is a need to manage such pressures in an appropriate way and the Plan's policies provide the appropriate balance. Most new development is guided by the spatial strategy to locations within or on the edge of existing settlements. It is also in countryside or in coastal locations where minerals and certain renewable energy opportunities exist. The Plan's policies allow for the responsible extraction of resources or deployment of renewable energy technologies in appropriate circumstances. The spatial framework for wind farm development is an important part of this. Key considerations overall will be a need to ensure that the special characteristics and amenity of the area will be conserved or enhanced, with provision for restoration also a priority where appropriate. Energy, heat and digital communications networks and other essential infrastructure development is also supported in appropriate circumstances to ensure that the area's material assets can support sustainable economic growth.

2.13 A further important task for the spatial strategy is to reflect the role that East Lothian is expected to play in Scotland's future. The strategy provides for the National Development status set out in the Scottish Government's NPF3 in relation to land at Cockenzie Power Station and the other possibilities set out in that document for the area. The strategy reflects the need for an area of co-ordinated action along the Forth coast from Cockenzie to Torness and supports the principle of an enhanced high voltage electricity transmission grid as another National Development relevant to East Lothian. The high level descriptions and diagrams that follow illustrate the Plan's main spatial strategy intentions for East Lothian and each separate cluster area. The Proposals Map (including insets) is site specific and is the principal reference for where policies or proposals will apply.

Main Strategy Diagram

MAIN SPATIAL STRATEGY DRIVERS

GROWING OUR COMMUNITIES

- a. Town Centres
- b. Blindwells New Settlement
- c. Areas with Regeneration Potential
- d. Education / Community Facilities
- e. Proposed Community Growth Areas
 - i. Employment
 - ii. Housing

NATURAL & CULTURAL HERITAGE

- a. Key Natural Heritage Sites
- b. Key Cultural Heritage Sites

LIST OF MAIN PROPOSALS

Musselburgh Cluster:

1. Craighall, Musselburgh
2. Land at Old Craighall Village, Musselburgh
3. Land at Old Craighall Junction South West, Musselburgh
4. Land at Old Craighall Junction, Musselburgh
5. Former Edenhall Hospital, Musselburgh
6. Pinkie Mains, Musselburgh
7. Pinkie Mains (Intensification), Musselburgh
8. Levenhall, Musselburgh
9. Land at Goshen, Musselburgh
10. Goshen New Secondary Education Establishment
11. Drummohr Caravan Park Housing Land Safeguard
12. Land at Wallyford
13. Dolphinstone Housing Land Safeguard
14. Barbachlaw Wallyford
15. Land at Whitecraig South
16. Land at Whitecraig North

Prestonpans Cluster:

17. Longniddry
18. Longniddry South Housing Land Safeguard
19. Supermarket at Mid Road, Prestonpans
20. Land at Cockenzie Power Station

Blindwells:

21. Blindwells New Settlement
22. Safeguarded Blindwells Expansion Area

Tranent Cluster:

23. Windygoul South, Tranent
24. Windygoul Primary School Expansion Land, Tranent
25. Employment, Windygoul South, Tranent
26. Lammermoor Terrace, Tranent
27. Bankpark Grove, Tranent
28. Kingslaw, Tranent
29. Macmerry North
30. Macmerry Business Park East
31. Gladsmuir East
32. Tynemount West, Ormiston
33. Elphinstone West
34. Woodhall Road, Wester Pencaitland
35. Lempockwells Road, Wester Pencaitland
36. Parkview, Easter Pencaitland
37. Humbie North
38. East Saltoun

LIST OF MAIN PROPOSALS

Haddington Cluster:

39. Letham Mains, Haddington
40. Letham Mains Expansion, Haddington
41. Land at Dovecot, Haddington
42. Land at Gateside East, Haddington
43. Land at Gateside West, Haddington
44. Gateside West, Haddington
45. Land at Alderston, Haddington
46. Land at Peppercraig, Haddington

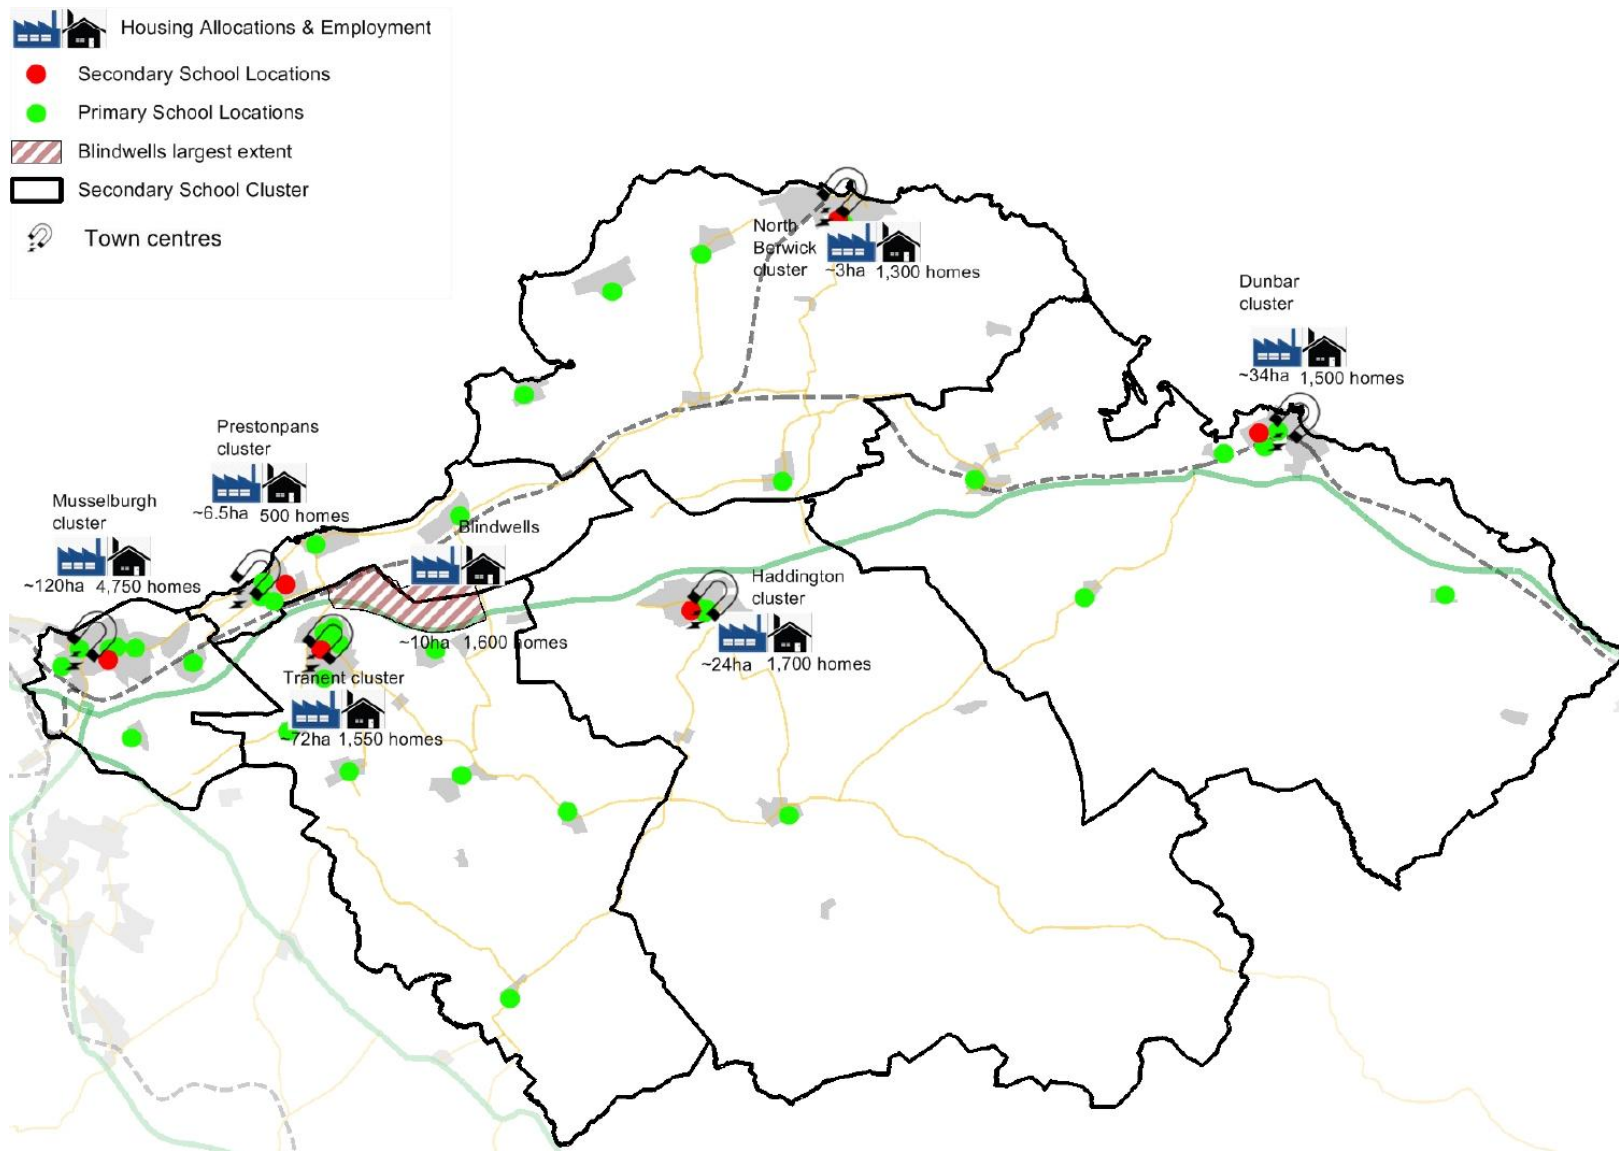

Dunbar Cluster:

47. Hallhill South West, Dunbar
48. Hallhil North, Dunbar
49. Dunbar Primary (Lochend Campus) School Expansion Land Safeguard
50. Brodie Road, Dunbar
51. Land at Newtonlees, Dunbar
52. Beveridge Row Belhaven, Dunbar
53. Land at Spott Road, Dunbar
54. Pencraig Hill, East Linton
55. Land at East Linton Auction Mart
56. Innerwick East
57. St John's Street, Spott

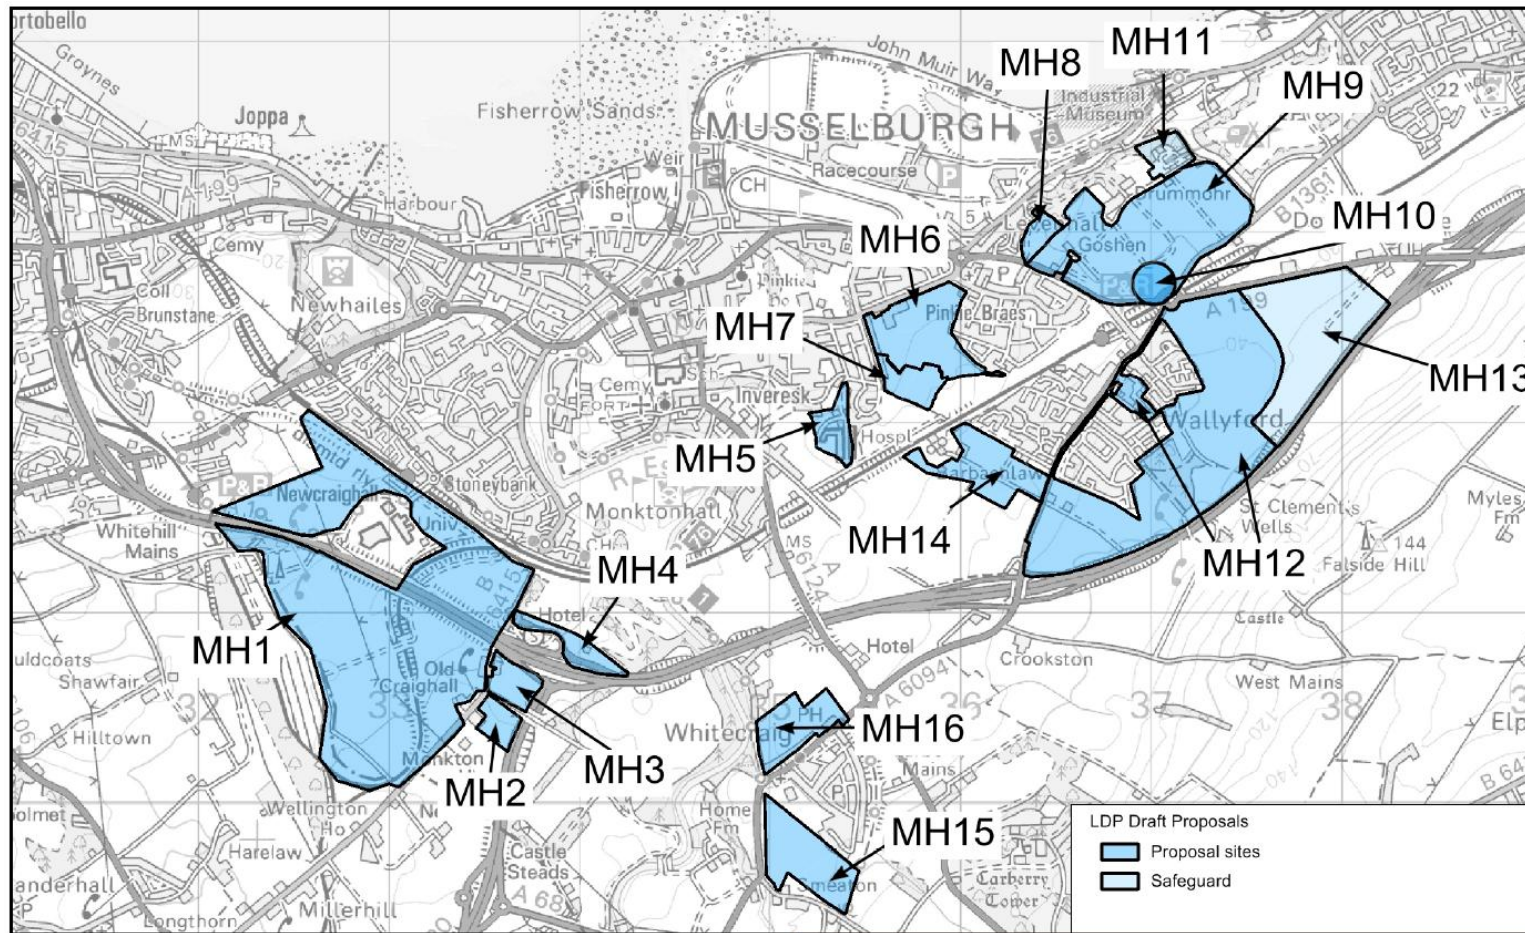

North Berwick Cluster:

58. Mains Farm, North Berwick
59. North Berwick High and Law Primary School Safeguarded Expansion Land
60. Gilsland, North Berwick
61. Land at Tantallon Road, North Berwick
62. Land at Ferrygate Farm, North Berwick
63. Former Fire Training School, Gullane
64. Saltcoats, Gullane
65. Fentoun Gait East, Gullane
66. Fentoun Gait South, Gullane
67. Aberlady West
68. Castlemains Dirleton

Levenhall, Musselburgh	Prop MH8	Land at Whitecraig North	Prop MH16

Introduction

- 2.14 The Musselburgh cluster is within the western and most accessible part of the Strategic Development Area. Sites identified for development in this area by the Plan will deliver the compact spatial strategy. The area is highly accessible, including by public transport.

Growing Our Communities

- 2.15 Musselburgh Town Centre will continue to be the focus for active land uses in this cluster, such as retail, commercial and business uses, particularly where the reuse of urban brownfield land or existing buildings is proposed. Yet there are few such opportunities available, particularly in the town centre. While recognising the town centre first principle, the spatial strategy carries forward existing allocations and the established housing land supply and seeks to deliver additional employment and housing opportunities as well as any necessary additional supporting infrastructure capacity. New local centres will also be introduced.
- 2.16 Land at Craighall is identified for a significant mixed use development, including a new local centre. Land for employment is focused around Queen Margaret University (QMU), a modified junction with the A1 and Musselburgh station: land is safeguarded to enhance the station in recognition of the scale of development. The Craighall site is also nearby Newcraighall Station, Shawfair station on the Borders Railway and the potential route of Tramline 3 as set out in the City of Edinburgh's Second Proposed LDP. Employment land to the west of QMU is located in the middle of these assets and will be developed for uses that support the key sectors of learning, life sciences and food and drink that are clustering in the area. Land to the west of the A1 at Craighall will be used for business and industry. Housing in the Craighall site will enable the servicing of the employment land. Separate housing and employment sites are identified to the south east of Old Craighall. Overall, development in the area will support the reintroduction of bus services to Old Craighall, and a new primary school and local centre, which will be provided adjacent to and north of the existing village in the Craighall site. The allocated housing site at Pinkie Mains will be intensified to accommodate more homes. The former Edenhall hospital site is allocated for residential development.
- 2.17 The Goshen mixed use proposal is adjacent to a rail halt, a park and choose site and one of the most deprived parts of Musselburgh. A new local centre and primary school will be provided at this site. The Goshen site will also provide a suitable location to deliver the new secondary education establishment needed to support development in the cluster. Land at Drummohr is safeguarded for housing as a potential future expansion of the Goshen development area. Land at Levenhall is allocated for housing. Mixed use proposals at Wallyford and Whitecraig are also well served by public transport and will provide new local centres and help regenerate these communities. A new primary school will be

provided at Wallyford. Whitecraig Primary School will be expanded. At Dolphingstone, land is safeguarded for a potential expansion of the Wallyford allocation, subject to a review of this plan and infrastructure capacity (prior completion of the distributor road through the current allocation as well as the new primary school will be a prerequisite of considering any such allocation).

Infrastructure and Resources

- 2.18 Improvements are proposed at Musselburgh and Wallyford stations, including car park expansions and platform lengthening. Strategic mitigation of development related impacts on the trunk road will be required, including at Old Craighall Junction and at Salter's Road and Dolphingstone Interchanges. Similarly, mitigation of transport and air quality issues at Musselburgh High Street will also be required. Additional education capacity, new education facilities and school's consultation will be necessary. Strategic water and drainage capacity exists for allocated sites, but additional foul capacity may be required in the long term.

Strategic Landscape Mitigation

- 2.19 The Plan modifies green belt boundaries within East Lothian to accommodate strategic development requirements where sites are accessible by a variety of transport modes, particularly public transport, and / or to realise regeneration opportunities. The remaining green belt is important to maintaining green belt objectives and to safeguard the setting and identity of settlements and will be vigorously defended. These areas include the land to the east of the A720 and south of the A1 as well as land to the north of the A1, including that which provides for the setting of the well-defined, established and visible southern edges of Musselburgh and Inveresk. Land around Edenhall and towards Pinkie Braes provides a setting for and buffer between the latter and Wallyford as well as views to prominent regional landmarks. Land to the west of Wallyford contributes to the setting of settlements in this area and is also the core of the Battle of Pinkie site. The remaining undeveloped land east of the Goshen site and between Musselburgh and Prestonpans contributes to the setting and separation of these settlements.
- 2.20 Strategic Green Network opportunities will be delivered with new development to ensure that Old Craighall Village, Musselburgh, Wallyford and Prestonpans retain their separate identities. This will also provide active travel opportunities to link communities, growth areas and places beyond them together. Opportunities for recreation and habitat creation and connection will be delivered as part of this multifunctional Green Network.

Natural and Cultural Heritage

- 2.21 The site of the Battle of Pinkie Cleugh is designated, as identified by the National Inventory.

Musselburgh Cluster: Main Development Proposals

Mixed Use Economic Development Proposal: Land at Craighall, Musselburgh

- 2.22 Land at Craighall will provide an economic development location of regional importance and a new mixed use, housing-led urban neighbourhood around Old Craighall. This site is one of the most accessible parts of East Lothian and is well served by public transport, and there are opportunities to significantly improve this in the development of the site. New or improved connections, including for active travel, between existing or proposed development areas or transport routes or nodes (including in adjoining local authority areas) must be provided as part of this development. This, in combination with a modified A1 junction providing an underpass of the A1 at Queen Margaret Drive, will improve access in the area, including for bus based public transport. Land is also safeguarded as part of this development to improve Musselburgh station as a transport interchange. To ensure a comprehensive solution for the delivery of the Craighall mixed use area the servicing of economic land must be enabled by housing development on other parts of the site. Proposals for the development of economic land must support the development of the key sectors of learning, life sciences and food and drink that are clustering in this area.
- 2.23 Development of the Craighall site will support existing communities, including Musselburgh and Old Craighall. As well as providing land for employment and homes, including affordable homes, a new local centre at Old Craighall village will be introduced as part of the Craighall development. The local centre will provide the focal point for a mix of land uses of an appropriate local scale and character, including a new primary school. This primary school may provide education capacity for other housing sites at Old Craighall too (e.g. PROP MH2) and it must be delivered as a first phase of development at Craighall. The location and design of the local centre will allow it to be conveniently accessed, including by active travel modes and bus, to ensure it is connected to other places, including nearby rail stations, Musselburgh town centre and regional employment and community facilities. To ensure an appropriate environment is created within the local centre and for the existing community, a realignment of the B6415 through the Craighall site must be investigated.
- 2.24 Development of this prominent site presents important design considerations, including the need to incorporate and blend zones of development that will have different scales and characters. Appropriate gateway design treatment for the approach to Edinburgh and Musselburgh that complements the massing of QMU is required. Yet proposals must also recognise the need to integrate with the smaller scale of buildings at Old Craighall while developing at an appropriate higher density that makes efficient use of this accessible land, consistent with Policy DP3. Noise mitigation must be acceptable in landscape terms. A high quality green network including landscaping, open space and a movement framework that integrates development across the site and with the surrounding area will be required.

PROP MH1: Land at Craighall, Musselburgh

Land at Craighall is allocated for a mixed use development including circa 700 homes, 79 ha employment land, a new local centre, a new primary school and community uses as well as infrastructure and associated works. Approximately 21ha of land to the north west of Queen Margaret University is allocated for economic development uses that support the key sectors of learning, life sciences and food and drink. The servicing of this land will be enabled by housing development on other parts of the Craighall site, which shall be the subject of a legal agreement associated with the site as a whole. The 55ha of land to the east of Millerhill Marshalling Yards between the freight rail loop and A1 is allocated for employment uses, consistent with Policy EMP1, with access to be taken from the A1 via a modified junction with an underpass of the A1 at Queen Margaret Drive. This, in combination with existing bridges of the east coast rail line and rail freight loop, and bus access from land at Newcraighall, the transport network within the Craighall site must significantly improve connections to the site and in the wider area, particularly for bus based public transport. Approximately 3ha of land to the north of Queen Margaret University is safeguarded as part of this proposal for any future improvement of Musselburgh rail station, which shall become more accessible and able to be better served by bus as a result of these improved connections. The 21ha of land to the south of the A1 at Old Craighall is allocated for a mixed use, predominantly housing development which has capacity for circa 350 homes once sufficient land for the required local centre and primary school is identified at this site. The 15ha of land to the east of Queen Margaret University and north of the A1 is allocated for housing and has capacity for circa 350 homes. Access to both housing sites will be from the local road network. A comprehensive masterplan for the entire allocated Craighall site that conforms to the Council's West Musselburgh Design Framework and the relevant Development Brief will be required as part of a planning application. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Land at Old Craighall Village

- 2.25 Land at Old Craighall East obtained planning permission on appeal and is allocated for circa 50 homes. To the south of this site land at Newton Farm is also allocated for circa 50 homes. The preference is for a joint masterplan to be prepared in respect of both sites: however, in recognition of the appeal decision, any masterplan for either site must demonstrate how development of one site will complement and not undermine the development of the other, including in terms of access, and ensure that development will be integrated, including with its surroundings.
- 2.26 Land to the north east of this site adjacent to the A720 and beyond the category A-listed Monkton House and its setting, can be developed without harming cultural heritage

assets. Noise mitigation must be acceptable in landscape terms. Significant landscape planting is required to define new defensible green belt boundaries and to contribute towards green network objectives.

PROP MH2: Land at Old Craighall Village

Land at Old Craighall is allocated for circa 100 homes. A design solution for these sites that conforms to the Council's West Musselburgh Design Framework and the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Employment Proposal: Land at Old Craighall Junction South West

- 2.27 Land to the south west of Old Craighall Junction between the A720 and Old Craighall Road is allocated for employment use. A masterplan for the entire allocated site will be required to accompany any planning application for the allocated land.

PROP MH3: Land at Old Craighall Junction South West

Approximately 5ha of land at Old Craighall Junction South West is allocated for employment uses. A design solution for this site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on air quality as appropriate. Policy EMP1 applies.

Employment Proposal: Land at Old Craighall Junction, Musselburgh

- 2.28 Land to the north of Old Craighall Junction between the A720 and Old Craighall Road was allocated by the previous local plan for employment. Planning permission was approved for employment uses and a hotel, but this proposal was not implemented and planning permission has now lapsed. The site continues to be allocated for employment use by this plan. A masterplan for the entire allocated site will be required to accompany any planning application for the allocated land.

PROP MH4: Land at Old Craighall Junction, Musselburgh

Approximately 5ha of land at Old Craighall Junction is allocated for employment uses. A design solution for this site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a

proportionate basis for any cumulative impacts with other proposals including on the transport network and on air quality as appropriate. Policy EMP1 applies.

Housing Proposal: Former Edenhall Hospital Site, Musselburgh

- 2.29 NHS operations have now ceased at the former Edenhall Hospital site and it is brownfield land. It is allocated for a residential development of circa 100 homes, subject to the mitigation of any development related impacts including on listed buildings within the site. A masterplan for the entire allocated site will be required to accompany any planning application for the allocated land.

PROP MH5: Former Edenhall Hospital Site, Musselburgh

Land at the former Edenhall Hospital site is allocated for a residential development of circa 100 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Pinkie Mains, Musselburgh

- 2.30 Land at Pinkie Mains, Musselburgh was allocated by the previous local plan for a residential development including circa 450 homes, community facilities, infrastructure and associated works. The Council has approved planning permissions for 473 dwellings on part of the allocated land, including detailed proposals, and the development is under construction. The Council continues to support the principle of development as set out in the approved masterplan for the site.

PROP MH6: Pinkie Mains, Musselburgh

Land at Pinkie Mains, Musselburgh is allocated for a residential development including circa 450 homes, community uses, infrastructure and associated works. Planning permission has been approved for this development, which is under construction. The Council has approved an associated masterplan, to which any detailed development proposal for the allocated land must conform.

Housing Proposal: Pinkie Mains, Musselburgh (Intensification)

- 2.31 There is a further area of land to the south of and within the original Pinkie Mains allocation (PROP MH6), which has capacity for additional housing development as shown on the approved masterplan for the site. This land has capacity for circa 130 homes. The principle of developing this allocated land for housing is supported provided any proposal conforms to the approved masterplan for the site.

PROP MH7: Pinkie Mains, Musselburgh (Intensification)

The principle of intensifying the capacity for housing development at Pinkie Mains, Musselburgh by approximately a further 130 homes is supported provided proposals conform to the Council approved masterplan for the site which is under construction. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Levenhall, Musselburgh

- 2.32 Land at Levenhall is allocated for circa 65 houses, subject to the mitigation of any development related impacts on a cumulative basis as appropriate, including transportation and any air quality impacts. A masterplan for the entire allocated site will be required to accompany any planning application for the allocated land.

PROP MH8: Levenhall, Musselburgh

Land at Levenhall is allocated for a residential development of circa 65 homes. A comprehensive masterplan for the entire allocated site that conforms to the Council's East Musselburgh Design Framework and the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Mixed Use Regeneration Proposal: Land at Goshen, Musselburgh

- 2.33 Land at Goshen is proposed as a mixed use development including circa 1,000 homes, a new local centre as well as a new primary and secondary school establishment. The Goshen site is one of the most accessible parts of East Lothian and is well served by public transport. It shall be developed at an appropriate higher density to make good use of this accessible land, consistent with Policy DP3. The development of this site including provision of the required education and community facilities will support community regeneration objectives for east Musselburgh. To complement these objectives the new local centre will be located at the western boundary of the site adjacent to the A199 and the existing urban edge of Musselburgh.

- 2.34 A new primary school will be provided as part of the new local centre. This primary school may also provide education capacity for other housing sites (e.g. PROP MH11) so must be delivered as a first phase of development. The Goshen site will also be the location for the new secondary school establishment that is required in the east of Musselburgh in association with the spatial strategy for the area. As with the new primary school, the new secondary school establishment at Goshen will be provided as part of the Goshen local centre: however, to ensure the ability to service other housing land in the Musselburgh area with secondary education capacity is not prejudiced by, or dependant on, the prior development of the Goshen site, this Plan provides for the secondary school establishment at Goshen to be delivered separately from and in advance of the development of other parts of the Goshen site. The secondary school establishment at Goshen is therefore promoted under a separate proposal (PROP M10).
- 2.35 Vehicular access to the Goshen site can be provided via the local road network, but as with other sites in the area cumulative transportation impacts must be assessed and any mitigation provided, including in relation to any air quality impacts. A high quality green network including landscaping, open space and a movement framework that integrates development across the site and with the surrounding area will be essential. In particular, the selective positioning of structural planting and open space within the site must be used to conserve settlement identity and setting.

PROP MH9: Land at Goshen, Musselburgh

Land at Goshen is allocated for a mixed use development including circa 1,000 homes, a new local centre, a new primary school, a new secondary school establishment as well as other community uses, infrastructure and associated works. A comprehensive masterplan for the entire allocated site that conforms to the Council's East Musselburgh Design Framework and the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

PROP MH10: Goshen New Secondary School Establishment

Land at Goshen is allocated for a new secondary school establishment to serve the Musselburgh area. The new secondary school establishment shall be located on the south-western corner of the site, adjacent to the A199. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate. Policy SECF1 applies.

Housing Safeguard: Land at Drummohr Caravan Park

- 2.36 The Drummohr site is currently in use as a caravan park, but into the long term this operation may cease. The site is currently separate from Musselburgh and within the green belt. However, it would represent a logical extension to Musselburgh but only when the Goshen site is substantially complete. As such, the site at Drummohr may be a suitable location for housing development in the medium to long term.

PROP MH11: Land at Drummohr Housing Land Safeguard

Drummohr Caravan Park is safeguarded for circa 100 homes. Whilst the continued operation of the caravan park is supported, development that would undermine the Council's ability to consider a future housing land allocation here will not be supported. Confirmation of any development allocation here will be subject to a review of this Plan.

Mixed Use Regeneration Proposal: Land at Wallyford

- 2.37 Land at Wallyford was allocated by the previous local plan for a mixed use development including approximately 1,000 homes, a new local centre, a new primary school, other community facilities, infrastructure and associated works. The site is nearby Wallyford station and is well served by public transport. It shall be developed at an appropriate higher density to make good use of this accessible land, consistent with Policy DP3. A key objective of this proposal is to bring about a regeneration of Wallyford, including the grouping of education and community facilities as part of a new local centre to be provided at the centre of the expanded settlement within the existing allocated site.
- 2.38 Key development requirements for the Wallyford development area are the provision of a new primary school for the settlement and the delivery of a new link road through the site to reduce or remove through traffic from Salter's Road. The development requirements for the site are detailed in the Council's Development Brief for the site, which must be conformed to in the preparation of any masterplan. The Council has approved planning permission and a masterplan for the allocated land, and continues to support the principles of development as set out in the approved masterplan for the site.
- 2.39 The latest planning permission for the site has increased its capacity for residential development from circa 1,000 homes to circa 1,450 homes. Detailed associated infrastructure proposals have been approved. Remedial ground work to prepare the land for development has commenced.

PROP MH12: Land at Wallyford

Land at Wallyford is allocated for a mixed use development including circa 1,450 homes, a new local centre, a new primary school as well as other community uses, infrastructure and associated works. Planning permission has been approved for this development and the Council has approved an associated masterplan, to which any detailed development proposal for the allocated land must conform.

Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's East Musselburgh Design Framework and the relevant Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Safeguard: Land at Dolphingstone

- 2.40 In to the long term, there may be an opportunity to expand Wallyford further east beyond the area of the current Wallyford allocation towards the Dolphingstone A1(T) Interchange, into land which is currently in the green belt. This land may have capacity for circa 600 homes. Careful consideration of landscape impacts and mitigation would be required, which may reduce the development capacity of the site. An appropriate education solution would be required. This land will only be considered for development once the new primary school at Wallyford has been delivered and the current allocation is substantially built out with new link road and primary school complete.

PROP MH13: Dolphingstone Housing Land Safeguard

Land at Dolphingstone is safeguarded for circa 600 homes. Development that would undermine the Council's ability to consider a future housing land allocation here will not be supported. Confirmation of any development allocation here will be subject to a review of this Plan.

Housing Proposal: Barbachlaw, Wallyford

- 2.41 Land at Barbachlaw, Wallyford, is allocated for circa 90 homes to reflect a planning appeal decision. For the avoidance of doubt the completion of the stadium proposal on the adjacent land continues to be supported; the completion of that facility is to be cross-funded by a residential development of this site. To secure this objective, no work (other than preliminary site preparation works) shall be begun on the houses until a binding contract has been put in place to complete the adjacent stadium for use.

PROP MH14: Barbachlaw, Wallyford

Land at Barbachlaw, Wallyford is allocated for circa 90 homes to reflect a planning appeal decision. No work (other than preliminary site preparation works) shall be begun on the houses until a binding contract has been put in place to complete the adjacent stadium for use. Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's East Musselburgh Design Framework and the relevant Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Mixed Use Regeneration Proposals: Land at Whitecraig

2.42 Two sites at Whitecraig are proposed for development to help regenerate the settlement. Land to the south of Whitecraig is adjacent to the primary school campus and open space and is allocated for circa 300 homes. This allocation also provides land to expand these community facilities if required. A road connection between Whitecraig Avenue through this site to Salter's Road will also be required as part of this development. New defensible green belt boundaries must be formed at the western and southern site boundaries.

PROP MH15: Land at Whitecraig South

Land at Whitecraig south is allocated for a mixed use development including circa 300 homes, the expansion of the primary school campus and provision of other community uses, infrastructure and associated works as required. A comprehensive masterplan for this site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

2.43 Land at Whitecraig North is allocated for circa 200 homes. The site can be accessed from the local road network. New defensible green belt boundaries must be formed at the northern, western and eastern site boundaries.

PROP MH16: Land at Whitecraig North

Land at Whitecraig North is allocated for a mixed use development including circa 200 homes and the provision of infrastructure and associated works. A comprehensive masterplan for this site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Other Employment or Housing Sites in the Musselburgh Area

- 2.44 There are a number of other employment or housing sites in the Musselburgh area that although are important are nonetheless of a scale that does not justify a specific proposal as part of the main spatial strategy. Some of these development sites were allocated by previous local plans or form part of the established housing or economic land supply because they are windfall proposals that have planning permission. Some of these sites are also under construction but not yet complete. The Council continues to support the development of these sites.
- 2.45 As such, Table EMP1: Employment Proposals by Cluster Area and Table HOU1: Housing Proposals by Cluster Area set out the full range of sites the development of which is supported for economic or residential development respectively in each cluster. These sites are also illustrated on the relevant inset map of the Proposals Map where relevant. Sites that are included with these tables may also be subject to Development Briefs and this is indicated in the relevant table, together with the Local Development Plan policies that apply to the site where relevant.

Area Frameworks or Development Briefs

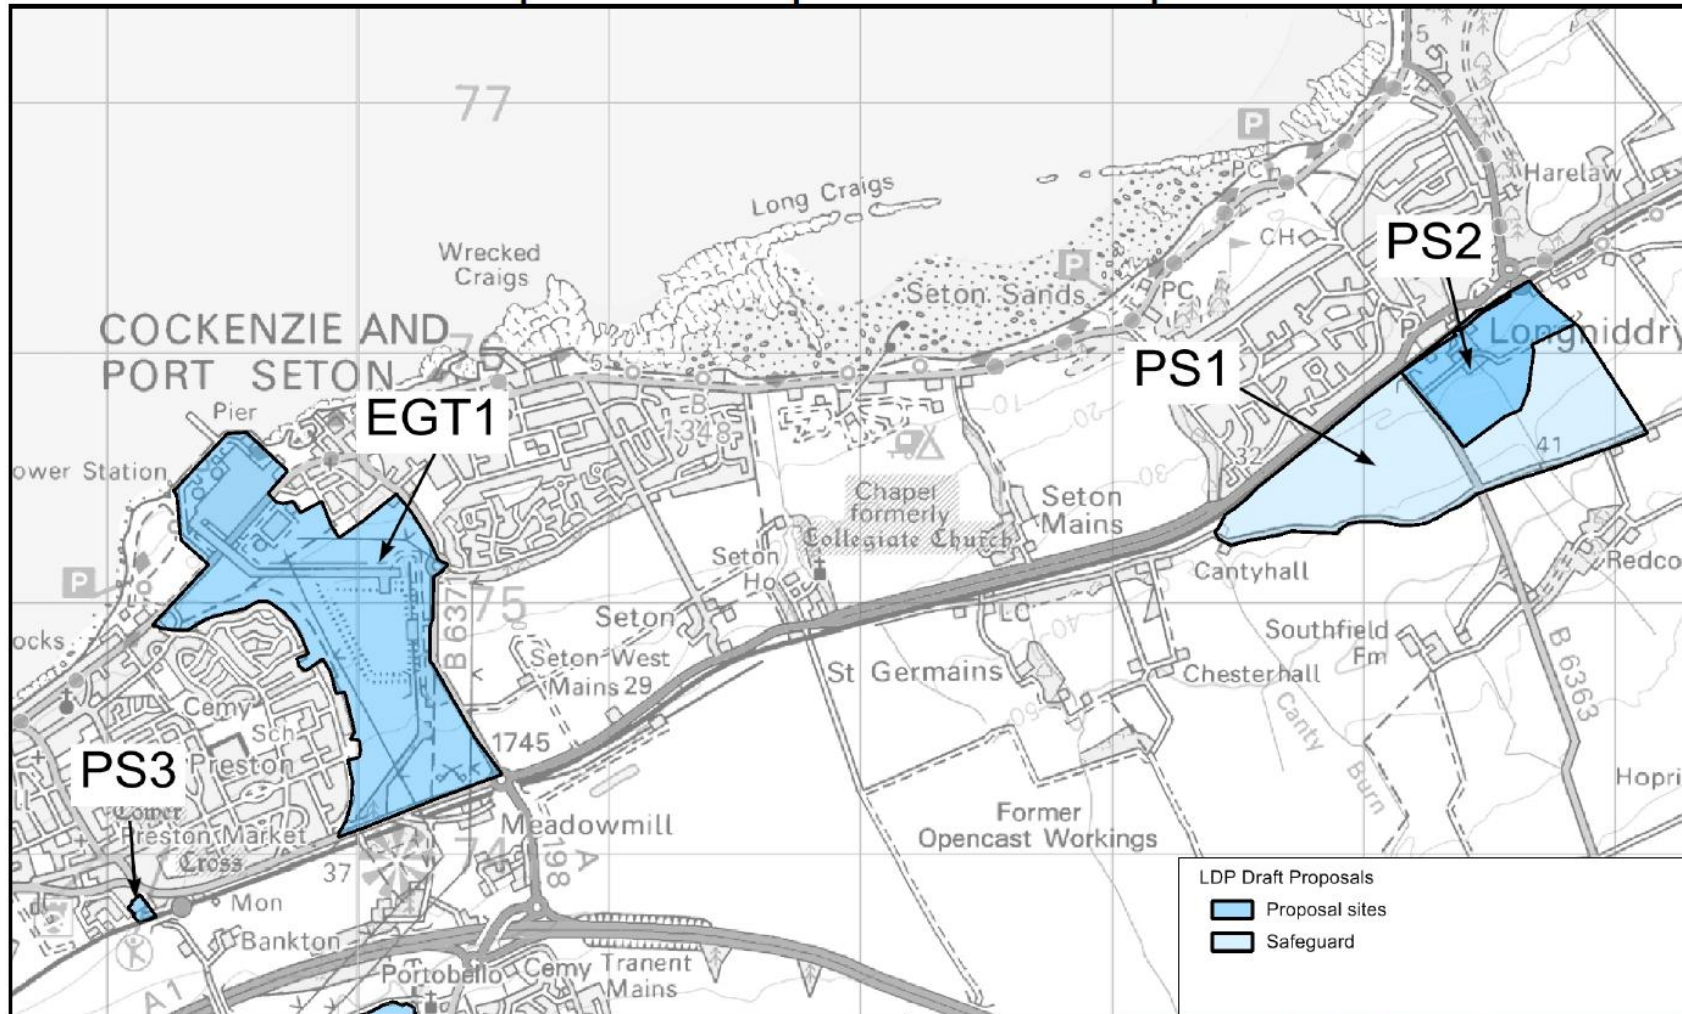

- 2.46 The Council has adopted as supplementary planning guidance two Area Design Frameworks for the Musselburgh cluster. These documents are called 'The West Musselburgh Design Framework' and 'The East Musselburgh Design Framework. These area frameworks include development briefs for allocated sites that set out design principles to guide development proposals. Where there is a need for a site to conform to the relevant area design framework or development brief this is indicated in the respective proposal.

Policy MH17: Area Design Frameworks and Development Briefs

As part of any planning application for any allocated site, comprehensive masterplan solutions for the entire allocated site must be submitted. Proposed masterplans must conform to The West Musselburgh Design Framework or The East Musselburgh Design Framework as relevant and / or the relevant Development Brief prepared for the site.

Proposed masterplans must demonstrate how the relevant objectives for the allocated site will be secured, how development will be delivered on an appropriate phased basis, and set out design requirements to ensure the development will properly integrate with its surroundings and the character of the local area.

Spatial Strategy for the Prestonpans / Cockenzie / Port Seton / Longniddry Cluster

Proposals – Prestonpans Cluster	
Longniddry	Prop PS1
Longniddry South Housing Land Safeguard	Prop PS2
Supermarket at Mid Road, Prestonpans	Prop PS3
Former Cockenzie Power station	EGT1

Introduction

- 2.47 This cluster is within the western part of the Strategic Development Area. Sites identified for development in this area by the Plan will deliver the compact spatial strategy. The area is highly accessible, including via public transport.

Growing Our Communities

- 2.48 Prestonpans Town Centre will continue to be the focus for active land uses in the cluster, such as retail, commercial and business uses: local centres at Cockenzie, Port Seton and Longniddry will also be important locations for such uses but will be subservient to the town centre. The reuse of urban brownfield land or existing buildings will be prioritised, yet there are few such opportunities available, particularly in these centres. While recognising the town centre first principle, the spatial strategy carries forward existing allocations and the established housing land supply and seeks to deliver additional employment and housing opportunities as well as any necessary additional supporting infrastructure capacity. New local centres will also be introduced.
- 2.49 National Planning Framework 3 safeguards land at Cockenzie Power Station for future thermal generation and notes that there may be opportunities for renewable energy-related investment. It designates Cockenzie as part of National Development 3 'Carbon Capture and Storage Network and Thermal Generation'. Notwithstanding this, NPF3 indicates that there may also be opportunities for renewable energy-related investment at the site. If there is insufficient land at Cockenzie to accommodate competing proposals, priority is to be given to those which make best use of the area's assets and secure the greatest economic benefits. Consent was granted in 2011 for conversion of Cockenzie Power Station from coal-fired to gas-fired generation. However, the current owner of the site confirmed in 2015 that it will not go ahead with this proposal. To avoid prejudicing the National Development status safeguarding the Cockenzie site for thermal generation proposals and Carbon Capture and Storage facilities, other forms of development cannot be supported at the site until such time as a thermal generation proposal is implemented or unless or until its National Development status is reviewed in any revision of NPF3.
- 2.50 NPF3 also notes potential at Cockenzie for a new port related to energy development, grid connections to potential off shore wind projects and for converter stations. The importance of the coast between Cockenzie and Torness for a potential energy hub and area for co-ordinated action is also recognised. Developers are to work together and share infrastructure where possible within this area.
- 2.51 Land at Longniddry, south of the rail line, is allocated for circa 450 homes plus associated employment development, community facilities and infrastructure as an initial phase of development. It must deliver connections for pedestrians and cyclists underneath the rail line to Longniddry via an existing underpass to the north. The underpass to the west must

be made capable of accommodating increased vehicular trips, including bus access. The initial phase of development must also provide vehicular and active travel access routes to the southern platforms of Longniddry Station from the B6363, and provide land for any expansion the station car park and provide land to lengthen station platforms. Land is safeguarded at Longniddry for a potential future expansion of this allocated site, subject to a review of this plan and infrastructure capacity.

Infrastructure and Resources

- 2.52 Improvements are proposed at Prestonpans and Longniddry stations, including car park expansions and platform lengthening. Strategic mitigation of development related impacts on the trunk road will be required, including at Old Craighall junction and at Bankton and Gladsmuir Interchanges, and on the local road network, including at Meadowmill Roundabout. Additional education capacity will be required, as might school's consultation to accommodate development in other clusters. Strategic water and drainage capacity exists for allocated sites, but additional foul capacity may be required in the long term.

Strategic Landscape Mitigation

- 2.53 The green belt extends to the west and south of Prestonpans, between it, Tranent and Musselburgh. The Plan does not modify green belt boundaries in this cluster to safeguard the setting and identity of these settlements and to prevent coalescence. The remaining green belt is important to retaining green belt objectives and will be vigorously defended.
- 2.54 There are areas of land outwith the green belt that are also under development pressure. These are between Prestonpans, Cockenzie, the allocated land at Blindwells and Tranent. Development in these locations would lead to the coalescence of settlements, undermine their character and setting, compromise cultural heritage assets, including battlefields, and / or lead to the loss of the best quality prime agricultural land. The combination of these environmental constraints points to a need to restrain further built development which, individually or cumulatively, would undermine related objectives. A Countryside Around Town Designation therefore applies to land between these neighbouring settlements.
- 2.55 Strategic Green Network opportunities will be delivered, including within the Countryside Around Town Designation, to ensure Prestonpans, Cockenzie, Tranent, Blindwells and Longniddry retain their separate identities. This will provide active travel opportunities to link communities, growth areas and places beyond them together. Opportunities for recreation and habitat creation and connection will be delivered as part of the multifunctional Green Network.

Natural and Cultural Heritage

- 2.56 The site of the Battle of Prestonpans is designated, as identified by the National Inventory.

Prestonpans Cluster: Main Development Proposals

Mixed Use Proposal: Longniddry South

- 2.57 Land at Longniddry South is allocated for a settlement expansion of around 450 homes plus associated employment development, community facilities and infrastructure. The site is focused around existing listed buildings at Longniddry Farm, which must be retained and reused. The site benefits from good accessibility to the rail network, and proposals should maximise the potential for pedestrian and cycle links from the site to the railway station. It shall also be developed at an appropriate higher density to make good use of this accessible land, consistent with Policy DP3. The site's development should also make provision for vehicular and active travel access to the southern platforms of the station from the B6363 and additional station car parking and other station improvements and land shall be safeguard for this as part of the development.
- 2.58 A masterplan for the site will be required, which shall conform to the relevant Development Brief. It shall illustrate how opportunities to promote community integration with the existing settlement have been maximised, including upgrading of existing connections under the railway to allow for pedestrian and cycle movement, as well as appropriate upgrades to the road junction of the A198 and B6363. There will also be a need to ensure delivery of strategic Green Network objectives, including how these would help secure an appropriate landscape setting for the expanded settlement. Development is subject to mitigation of development related impacts, including transportation and education capacity. Subject to the programming of development the existing primary school may be able to accommodate the educational impacts of this proposal. Traffic calming and associated environmental works on the A198 through the village will be necessary, including provision of suitable pedestrian crossing points.

PROP PS1: Longniddry South

Land at Longniddry South is allocated for a development of circa 450 homes plus associated employment development, community facilities and infrastructure. A masterplan for the entire site will be required as part of any planning application, which must conform to the relevant Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing safeguard: Longniddry South

- 2.59 In to the medium or longer term, there is potential for a larger southerly settlement expansion of Longniddry beyond the 450 homes proposed by this Plan. This further expansion could yield circa 550 additional homes. Land for this is safeguarded by the Plan for potential development in the medium to long term. Its development would be likely to require the provision of an additional developer-funded primary school facility and would require appropriate measures to promote successful community integration given the presence of the railway line.

PROP PS2: Longniddry South Housing Land Safeguard

Additional land south of Longniddry is safeguarded for circa 550 homes. Development that would undermine the Council's ability to consider a future housing land allocation here will not be supported. Confirmation of any development allocation here will be subject to a review of this Plan.

Retail Proposal: Mid Road, Prestonpans

- 2.60 Land at Mid Road, Prestonpans is allocated for retail development. Planning permission has been approved for a retail supermarket and associated development and this is included for information only.

PROP PS3: Supermarket at Mid Road, Prestonpans

Land at Mid Road, Prestonpans is allocated for a supermarket. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate. Policy EMP1 applies.

Other Employment or Housing Sites in the Prestonpans Area

- 2.61 There are a number of other employment or housing sites in the Prestonpans area that although are important are nonetheless of a scale that does not justify a specific proposal as part of the main spatial strategy. Some of these development sites were allocated by previous local plans or form part of the established housing or economic land supply because they are windfall proposals that have planning permission. Some of these sites are also under construction but not yet complete. The Council continues to support the development of these sites.

- 2.62 As such, Table EMP1: Employment Proposals by Cluster Area and Table HOU1: Housing Proposals by Cluster Area set out the full range of sites the development of which is supported for economic or residential development respectively in each cluster. These sites are also illustrated on the relevant inset map of the Proposals Map where relevant. Sites that are included with these tables may also be subject to Development Briefs and this is indicated in the relevant table, together with the Local Development Plan policies that apply to the site where relevant.

Other Relevant Proposals

- 2.63 Proposal EGT1 in the Energy section of the Plan safeguards land at Cockenzie Power Station, consistent with the Scottish Government's National Planning Framework 3.

Development Briefs

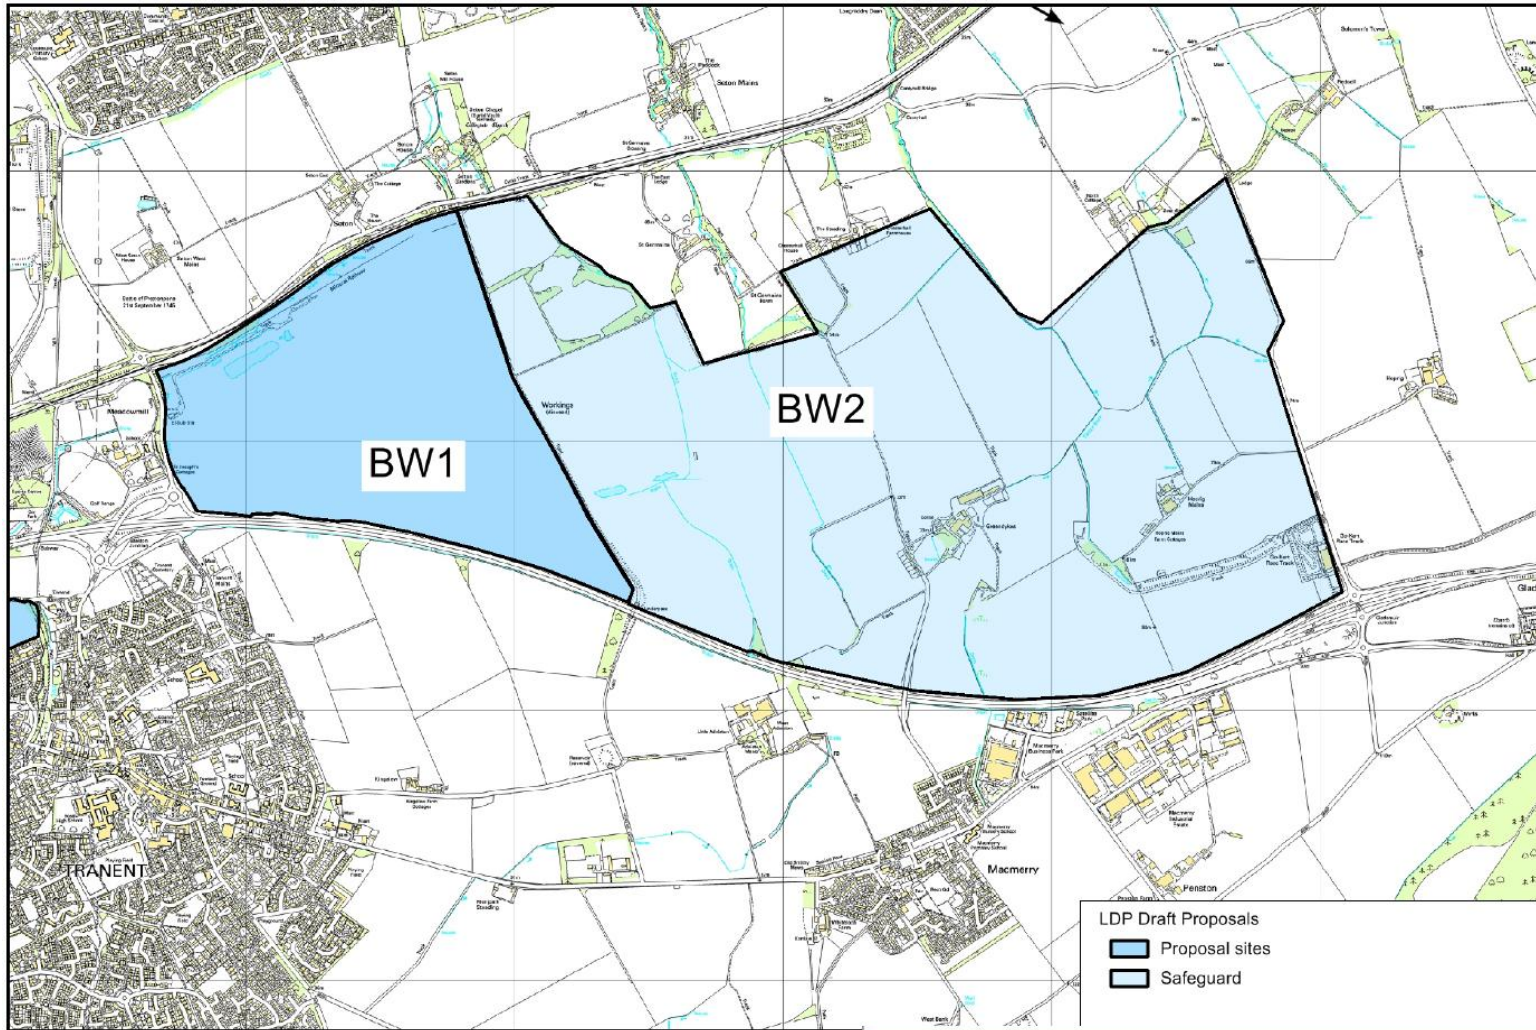

- 2.64 The Council has adopted as supplementary planning guidance development briefs for allocated sites that set out design principles to guide development proposals. Where there is a need for a site to conform to the relevant development brief this is indicated in the respective proposal.

Policy PS4: Development Briefs

As part of any planning application for any allocated site, comprehensive masterplan solutions for the entire allocated site must be submitted. Proposed masterplans must conform to the relevant Development Brief prepared for the site.

Proposed masterplans must demonstrate how the relevant objectives for the allocated site will be secured, how development will be delivered on an appropriate phased basis, and set out design requirements to ensure the development will properly integrate with its surroundings and the character of the local area.

Spatial Strategy for the Blindwells Cluster

Proposals - Blindwells	
Blindwells	Prop BW1
Safeguarded Blindwells Expansion Area	Prop BW2

Introduction

- 2.65 The Blindwells new settlement is within the western and highly accessible part of the Strategic Development Area. It is a key component of the current Strategic Development Plan's spatial strategy and the compact spatial strategy of this Plan. The area is highly accessible via public transport and this provision can be extended into the site.

Growing Our Communities

- 2.66 The SDP confirms an ongoing commitment to the Blindwells allocation as a site for a new settlement during the SDP period and beyond. The site is allocated for a mixed use new community including 1,600 homes, 10 hectares of employment land, a new mixed use local centre, education and community facilities as well as infrastructure and associated works. It shall be developed at an appropriate higher density to make good use of this accessible land, consistent with Policy DP3. This site is an opportunity to use previously developed land with degraded landscape character. A west to east phasing of development of this allocation is required.
- 2.67 The allocated site will be accessed from the A198 and the northern roundabout of the Bankton A1(T) Interchange. Signalisation of the Bankton south roundabout, and signalisation of either the A1 (T) off-ramp at Bankton north or possible signalisation of the entire roundabout, will be necessary. Provision of a parallel A1(T) diverge at Bankton (eastbound) and a parallel merge at Bankton (westbound) will be required. Traffic calming at Church Street Tranent as well as the remediation to entry widths and flare lengths on two approaches to the A189/ B6371 roundabout will be necessary. Strategic mitigation of development related impacts on the trunk road will also be required, including at Old Craighall Junction. Opportunities for potential rail access into the site must be safeguarded as part of the development. Provision must also be made within the site for the realignment and widening of the A198 and the repositioning of the Bankton north roundabout. This is required so the design for the current allocation does not prejudice a potential future expansion of Blindwells by allowing for additional trunk and local road network capacity to be provided in future and to ensure best use is made of existing infrastructure.
- 2.68 A key requirement for any masterplan associated with the current allocation is that it provides a layout and design solution that demonstrably allows the Council to consider a further eastward expansion of the settlement in future.

PROP BW1: Blindwells New Settlement

Land at Blindwells is allocated for a mixed use new community including circa 1,600 homes, no less than 10 hectares of employment land, a mixed use local centre, education and community facilities as well as infrastructure and associated works. A masterplan for the entire site will be required as part of any planning application, which must conform to the relevant Development Brief. Any development proposal that would undermine the ability to expand Blindwells will not be supported. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Land Safeguard: Potential Blindwells Expansion Area

- 2.69 There is potential for a significant eastward expansion of Blindwells new settlement beyond the eastern boundary of the allocated site onto other previously developed land, and beyond this onto greenfield land. If capable of expansion, Blindwells could accommodate a significant amount of any further growth directed to East Lothian by a future SDP. This may help minimise any need to direct any such additional strategic development to East Lothian's existing settlements, some of which are nearing the limit of expansion beyond which significant changes to their landscape setting, character and infrastructure would be required. These are important reasons for selecting the Blindwells site for development and for considering its potential for expansion.
- 2.70 As well as providing a location for potential population growth in East Lothian, a confirmed ability to expand Blindwells would provide a number of other important opportunities for the area. One of these would be to provide a sub-regional town centre within a larger Blindwells that is of a scale that would serve surrounding communities. This could improve the availability of local amenities and help regenerate nearby settlements whose economic base has declined and that have limited if any scope for further expansion. Located in the highly accessible western part of East Lothian, where most of the area's population is, a larger Blindwells would be a suitable location to promote future strategic employment and inward investment opportunities. Provision of new jobs, services and potentially further education facilities at Blindwells would improve their availability and proximity to East Lothian's communities. There is also scope to use this site to significantly improve public transport provision in the area. All of this could help reduce the need to travel as well as travel distances and related CO₂ emissions. In recognition of the significant development potential offered by a larger new settlement at Blindwells, and the long term opportunities and benefits it could bring in future for East Lothian, the Council has safeguarded land to the east of the current Blindwells allocation as a potential Blindwells Expansion Area. The

Council's vision is to realise these opportunities by fully developing the allocated site and Blindwells Expansion Area to create a large scale new mixed community for East Lothian.

- 2.71 However, the SDP predicates any expansion of Blindwells on comprehensive solutions being found that will deliver an entire, single and larger new settlement at Blindwells: it 'signposts' a vision for a larger new settlement at Blindwells, but does not require this to be delivered. As such, the Council does not need to and will not support any sub-optimal or piecemeal solution for the development of any larger area at or around Blindwells, even if homes may be delivered faster than with only the current Blindwells allocation. The Council will not support any solution for a larger Blindwells that may lead to the creation of separate new settlements. Similarly, the Council will not support any solution for a larger Blindwells that, as a prerequisite of making development land available that may deliver the Council's vision for Blindwells, would be conditional on the allocation of land outwith the allocated Blindwells site or safeguarded Blindwells Expansion Area for a development that is separate from the Council's vision for a larger Blindwells. If a comprehensive solution is found that would deliver the Council's vision for Blindwells, it may be possible and appropriate to develop parts of the new settlement faster with an alternative phasing pattern. However, an appropriate comprehensive solution for a larger Blindwells has not yet been found.
- 2.72 The allocated Blindwells site and the safeguarded Blindwells Expansion Area together identify the area of land for which the Council will seek an appropriate comprehensive solution for the delivery of a single larger new settlement. This area shall be known as the Blindwells Development Area. As a first step towards finding a comprehensive solution for this area the Council intends to prepare a Blindwells Development Area Design Framework as supplementary planning guidance. This Design Framework will be the spatial expression of the Council's vision for a larger new settlement at Blindwells, and will establish the associated infrastructure requirements. It will provide the basis against which the Council will seek to confirm, including with relevant landowners, if a comprehensive solution exists for the development of a larger new settlement at Blindwells.
- 2.73 Finding an appropriate comprehensive solution for a larger new settlement at Blindwells will first require the focus of all relevant landowners to agree and demonstrate to the Council that they are all willing and committed together to deliver the Council's vision for a larger Blindwells. This will include their joint agreement and commitment to a single funding and delivery mechanism for the provision of shared infrastructure and associated land as necessary to enable an appropriate phasing and timing of development for a larger new settlement. This will require school's consultations and the Council to agree and identify how, where and when to provide new education facilities and capacity relative to the development to ensure land can be made effective on an appropriate phased basis. This will be a collaborative process, and the commitment and ability to deliver a larger new

settlement at Blindwells must be demonstrated to and accepted by the Council before it will consider allocating the Blindwells Development Area for the development of a larger new settlement.

- 2.74 If, following this visioning exercise, a comprehensive solution for the Blindwells Development Area is found, it will be detailed in a Development Brief, the preparation of which will be led by the Council. This Development Brief will also need to specify the delivery mechanisms for the provision of shared infrastructure as necessary to enable an appropriate phasing and timing of development for a larger new settlement. The Development Brief will be prepared working collaboratively with others, including relevant landowners, the Key Agencies and other stakeholders, and would be adopted by the Council as Supplementary Guidance. If such Supplementary Guidance is adopted by the Council, this would confirm the allocation of the safeguarded Blindwells Expansion Area to contribute towards the development of a larger new settlement. Any development proposals for the Blindwells Development Area would need to conform to the Council's adopted Supplementary Guidance.
- 2.75 To avoid undermining the potential for a larger new settlement at Blindwells, the Council will not consider any strategic expansion at east Tranent unless and until an appropriate comprehensive solution for all of the Blindwells Development Area is found and its development is well advanced. As a minimum the Council will require the completion of a suitable link road through the whole of the Blindwells Development Area between the A198 and B6363, the provision of other essential infrastructure, utilities and services to and through this area that will be required to enable its development, and the transfer to the Council of suitable serviced land for all required education and community facilities necessary to deliver the larger new settlement. Additionally, this Plan safeguards land for a potential new trunk road interchange at Adniston within the Blindwells allocated site and the safeguarded Blindwells Expansion Area so, in the development of a comprehensive solution for a larger new settlement at Blindwells, the Council's long term ability to consider the potential for an eastern Tranent by-pass is not prejudiced.
- 2.76 In the absence of comprehensive solutions and an agreed phasing and timing strategy for how a single larger new settlement could be delivered at Blindwells, SESplan will need to review the contribution that the location may make to the spatial strategy for south east Scotland and East Lothian. For the clear avoidance of doubt, if comprehensive solutions are not found within a reasonable timeframe, SESplan may take the view that the concept of expanding Blindwells need be deleted from the spatial strategy.

PROP BW2: Safeguarded Blindwells Expansion Area

Land is safeguarded to the east of the Blindwells allocated site for a potential expansion of Blindwells new settlement. This safeguarded land in combination with the allocated Blindwells site is known as the Blindwells Development Area. The Blindwells Development Area is the area for which the Council has a vision to develop a larger new settlement at Blindwells.

The Council will prepare a Design Framework for the Blindwells Development Area to express its vision for this larger new settlement spatially, including its associated infrastructure requirements. This Design Framework will be the basis against which the Council will seek to confirm if a comprehensive solution for the development of that area exists, including with relevant landowners who must demonstrate to the Council's satisfaction that they agree and are all willing and committed together to deliver the Council's vision for a single larger new settlement at Blindwells, including in respect of delivery mechanisms for the provision and phasing of shared infrastructure as necessary to enable an appropriate phasing and timing of development.

If a comprehensive solution for the development of the entire area is found, it will be detailed in a Development Brief that would be adopted by the Council as Supplementary Guidance and as part of the Development Plan. This Supplementary Guidance will also detail the delivery mechanisms for the provision of shared infrastructure as necessary to enable an appropriate phasing and timing of development, including the identification of areas of land to which the associated legal agreement for the entire new settlement would relate. The preparation of this Supplementary Guidance will be led by the Council working collaboratively with others, including relevant landowners, the Key Agencies and other stakeholders.

Once such Supplementary Guidance has been adopted by the Council, this will confirm the allocation of the safeguarded Blindwells Expansion Area for the development of a larger Blindwells new settlement. The Supplementary Guidance will require and provide the basis against which a single planning application accompanied by a single masterplan and S75 legal agreement would be prepared for the safeguarded Blindwells Expansion Area. Any such proposal must conform to the Supplementary Guidance adopted by the Council.

Any development proposal for all or part of the safeguarded Blindwells Expansion Area that would undermine a single comprehensive solution or the Council's visions for a larger new settlement will not be supported: this will include proposals submitted in advance of the adoption by the Council of a Development Brief for the land. Any development proposal that would undermine the ability to expand Blindwells new settlement will not be supported.

Any development here would be subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Strategic Landscape Mitigation

- 2.77 As shown on the Proposals Map, a Countryside Around Town Designation applies to land between the neighbouring settlements of Prestonpans, Cockenzie, Blindwells and Tranent. Strategic Green Network opportunities will be delivered, including within the Countryside Around Town Designation, to ensure these settlements retain their separate identities and to provide active travel opportunities to link communities, growth areas and places beyond them together. Opportunities for recreation and habitat creation and connection will be delivered as part of the multifunctional Green Network.

Natural and Cultural Heritage

- 2.78 The site of the Battle of Prestonpans is designated, as identified by the National Inventory.

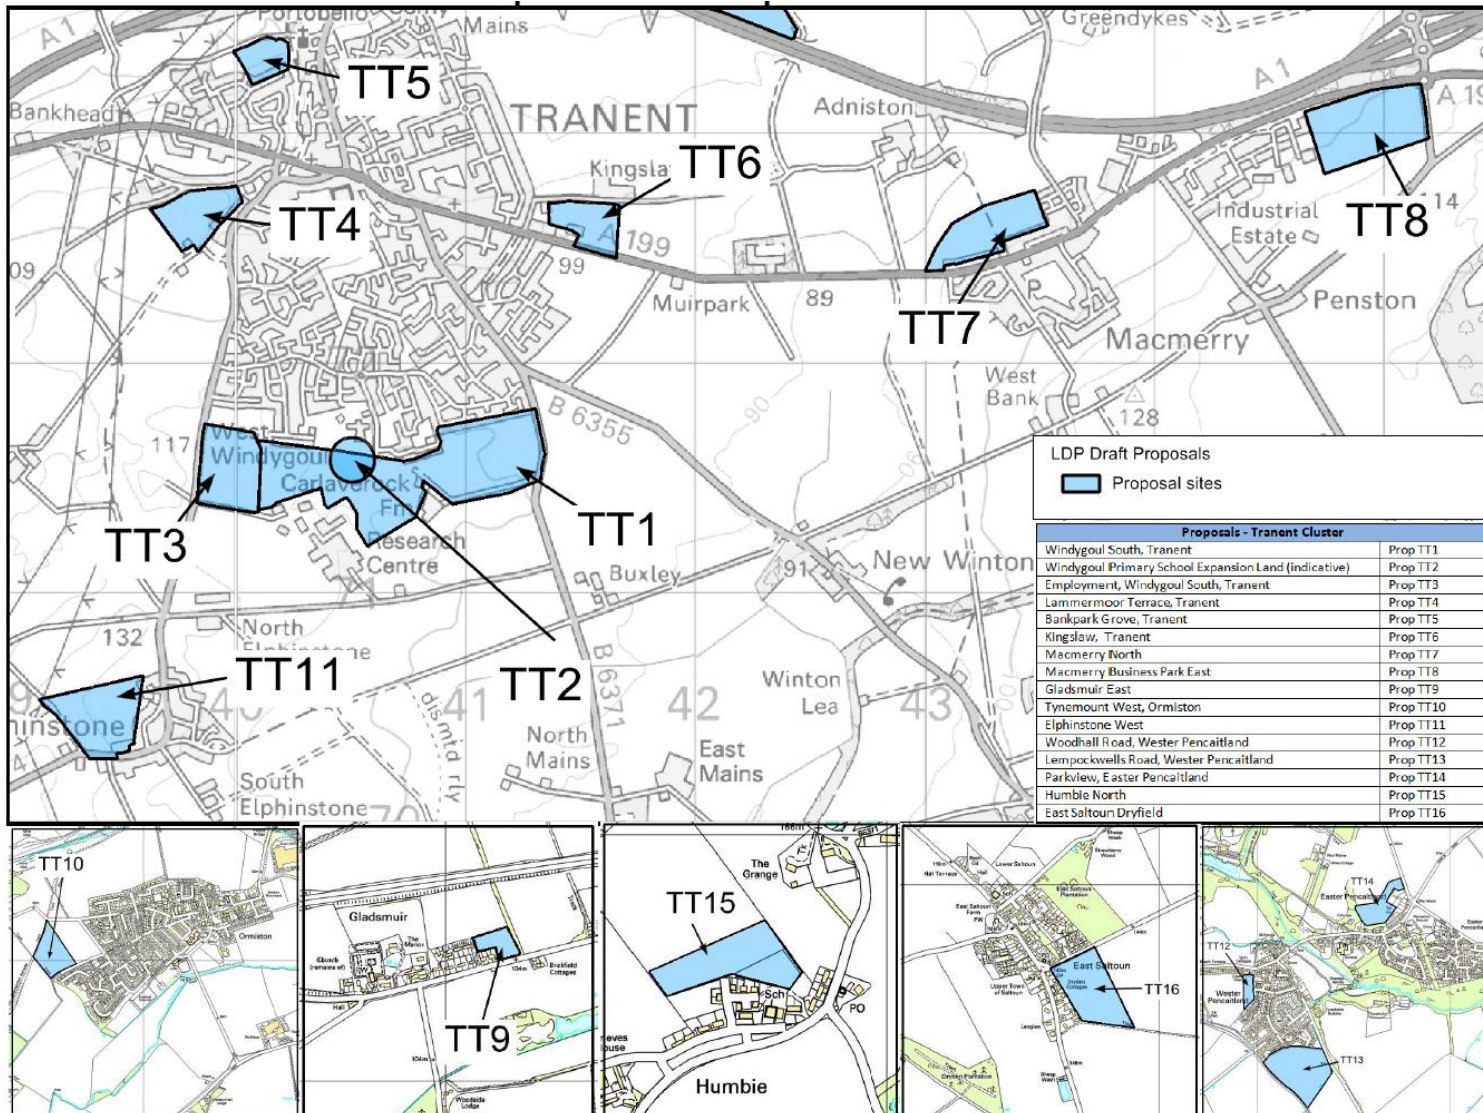

Blindwells Area Design Framework

- 2.79 As a first step towards finding comprehensive solutions for a larger new settlement at Blindwells, the Council will prepare and adopt a Design Framework for the Blindwells area as supplementary planning guidance. The Design Framework will cover the allocated site as well as the Blindwells Safeguarded Expansion Area – i.e. the Blindwells Development Area. For the avoidance of doubt, this non-statutory supplementary planning guidance would not constitute the statutory Supplementary Guidance referred to in Proposal BW2.
- 2.80 The Design Framework will provide the spatial expression of the Council's vision for how a larger new settlement at Blindwells should be developed. It will provide the basis against which the Council will seek to work collaboratively with relevant landowners, Key Agencies and other stakeholders as relevant and described above to find a comprehensive solution for the development of a larger new settlement at Blindwells. If found, this comprehensive solution would be specified in a Development Brief for the area that, if adopted by the Council as Supplementary Guidance, would confirm the allocation of the safeguarded Blindwells Expansion Area to contribute towards the development of a larger new settlement at Blindwells.

Policy BW3: Blindwells Area Design Framework

The Council intends to prepare a Design Framework for a larger Blindwells new settlement as non-statutory supplementary planning guidance, covering the Blindwells Development Area. For the clear avoidance of doubt, this non-statutory supplementary planning guidance will not constitute the statutory Supplementary Guidance referred to in PROP BW2. The Design Framework will express the Council's vision for a larger new settlement at Blindwells and, once adopted by the Council, will provide the context against which it will seek to engage and collaborate with relevant landowners, Key Agencies and other stakeholders as relevant to prepare a Development Brief that sets out a comprehensive solution as described in PROP BW2.

Spatial Strategy for the Tranent Cluster

Introduction

- 2.81 In this cluster Tranent and Macmerry are the main settlements within the western part of East Lothian Strategic Development Area. The western part of the SDA is highly accessible, including via public transport. Sites identified for development in this area by the Plan will deliver the compact spatial strategy. The settlements of Ormiston, Elphinstone, Pencaitland, New Winton, East and West Saltoun and Humbie are all outwith the SDA.

Growing Our Communities

- 2.82 Tranent Town Centre will continue to be the focus for active land uses in the cluster, including retail, commercial and business uses: local centres at Macmerry, Ormiston and Pencaitland will be important locations for such uses but will be subservient to the town centre. The other smaller settlements benefit from mixed use areas or local shops that will be protected. The reuse of urban brownfield land or existing buildings will be prioritised, yet other than those opportunities identified through a charrette there are few such opportunities. While recognising the town centre first principle, the spatial strategy carries forward existing allocations and the established housing land supply and seeks to deliver additional employment and housing opportunities as well as any necessary additional supporting infrastructure capacity. New local centres will also be introduced.
- 2.83 A southern expansion of Tranent is allocated for housing and to provide for the expansion of Windygoul Primary School campus to a size that will be sufficient once expanded to accommodate the cumulative impact of new housing allocations in the schools' catchment area. Suitable separation between the housing site and the operational employment land to the south will also be required. To the west of the housing site, employment land is allocated. The opportunity for or provision of a link road between the B6371 and the B6414 must be secured through both of these sites. This is so in future there is potential for the road through these sites to link to and form part of any eastern Tranent by-pass.
- 2.84 Any eastern by-pass of Tranent may be brought forward in association with an eastern expansion of the town for which there is currently no access or education capacity solution. Any potential for an eastern by-pass of Tranent would be dependent on confirmation of the ability to deliver any new A1(T) Interchange at Adniston. Any eastern expansion of Tranent accessed via the Bankton A1(T) Interchange would undermine the Council's vision for a larger Blindwells and is not supported, and will only be considered by the Council following the prior implementation of an appropriate comprehensive solution for a larger new settlement at Blindwells. Without these pre-requisites being met, no further significant housing growth at Tranent will be considered by the Council. This Plan safeguards land for a potential new trunk road interchange at Adniston within the Blindwells allocated site and the safeguarded Blindwells Expansion Area so, in the development of a comprehensive solution for a larger new settlement at Blindwells, the

Council's long term ability to consider the potential for an eastern Tranent by-pass is not prejudiced.

- 2.85 Smaller sites are allocated for housing at Bankpark Grove and Lammermoor Terrace, Tranent. Land is allocated to the east of Macmerry to expand Macmerry Industrial Estate and to the north of the settlement for housing. The settlements of Gladsmuir, Elphinstone, Ormiston and Pencaitland, East Saltoun and Humbie will also accommodate housing allocations in keeping with the scale and character of these settlements.

Infrastructure and Resources

- 2.86 Strategic mitigation of development related impacts on the trunk road will be required, including at Old Craighall Junction, Dolphingstone, Bankton and Gladsmuir Interchanges, and on the local road network. Similarly, mitigation of transport and potential air quality issues at Tranent High Street will also be required. Additional education capacity will be required, as might school's consultation to accommodate development in other clusters. The implications of the preferred sites at Tranent can be accommodated by Scottish Water. It has indicated that capacity exists in its strategic assets to accommodate the allocated sites here in the short term.

Strategic Landscape Mitigation

- 2.87 The Green Belt extends to the western fringes of Tranent. Open land to the north of the settlement is outwith the Green Belt but provides a setting for the town. The lack of built development allows views to nearby settlements and the city and regional landmarks, such as Arthur's Seat and the Firth of Forth. A Countryside Around Town designation has been applied here to complement the objectives discussed above for the Prestonpans/Port Seton/Cockenzie/Longniddry cluster for the land between Tranent, the coastal settlements and the Blindwells site. The village of Ormiston has its own unique historic character and a landscape setting that merits a Countryside Around Town designation for the most sensitive parts of its landscape setting. Strategic Green Network opportunities will be delivered, including within the Countryside Around Town Designations, to ensure the settlements of Prestonpans, Cockenzie, Tranent, Blindwells and Longniddry retain their separate identities. As part of a multifunctional Green Network active travel opportunities to link communities, growth areas and places beyond them together will be provided as well as opportunities for recreation and habitat creation and connection.

Natural and Cultural Heritage

- 2.88 The sites of the Battles of Prestonpans and Pinkie Cleugh are designated, as identified by the National Inventory.

Tranent Cluster: Main Development Proposals

Housing Proposal: Windygoul South, Tranent

- 2.89 Windygoul South, Tranent is allocated for circa 550 homes as a further expansion of the town. It shall be developed at an appropriate higher density to make good use of this accessible land, consistent with Policy DP3. The site will also provide for the expansion of Windygoul Primary School campus, to accommodate the impacts generated by this proposal and other housing sites in the schools' catchment area. Two points of access to the land will be required and traffic shall be encouraged to route to Edinburgh Road (A199) rather than High Street. This will assist in minimising the volume of through traffic and air quality impacts at High Street. Detailed traffic modelling of traffic and air quality impacts will be required. Road safety adjacent to Windygoul Primary School shall be maintained.
- 2.90 The opportunity for or provision of vehicular and active travel connections between the B6371 and the B6414 through this site and the adjacent site proposed for employment (PROP – TT3) must be secured. Suitable separation between the operational employment land to the south is also necessary. This should be achieved in the delivery of adequate open space as well as meeting Green Network objectives at site boundaries. A masterplan demonstrating how the design for this site could be integrated with the new employment land (PROP – TT3) to the south of the town and with the surrounding area will be required.

PROP TT1: Housing at Windygoul South, Tranent

Land at Windygoul South is allocated for a mixed use, predominantly residential development including circa 550 homes, the expansion of Windygoul Primary School campus as well as other community uses, infrastructure and associated works. A comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

- 2.91 Windygoul Primary school will become landlocked once the Windygoul South housing site is complete. As part of this housing land allocation land within the site is also allocated for an expansion of Windygoul Primary School campus. This is to make provision for additional primary education capacity in the schools' catchment area.

PROP TT2: Windygoul Primary School Expansion Land

Land to the south of the current Windygoul Primary School campus is allocated for the future expansion of the school campus. Policy SECF1 applies.

Employment Proposal: Windygoul South, Tranent

- 2.92 Approximately 8.6ha of land at Windygoul South West adjacent to Elphinstone Road and the road to Fleets Industrial Estate is allocated for employment uses, taking advantage of the site's good access and proximity to other proposed residential development and employment land. Structural planting will be required at the site boundaries. A masterplan demonstrating how the design for this site could be integrated with the new housing land (PROP – TT1) to the south of the town and with the surrounding area will be required.

PROP TT3: Employment, Windygoul South, Tranent

Approximately 8.6 ha of land at Windygoul South West is allocated for employment use, infrastructure and associated works. A comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on air quality as appropriate. Policy EMP1 applies.

Housing Proposal: Lammermoor Terrace, Tranent

- 2.93 Land at Lammermoor Terrace, Tranent is allocated for circa 120 homes. Cumulative impacts on the capacity of signals at the Edinburgh Road junction and on education capacity including at Windygoul Primary School, and wider traffic and air quality considerations will require mitigation. Access from the local road network is possible. Structural landscape planting and open space provision is required to integrate this site with the surroundings.

PROP TT4: Lammermoor Terrace, Tranent

Land at Lammermoor Terrace, Tranent is allocated for circa 120 homes. A design solution for the entire allocated site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Bankpark Grove, Tranent

- 2.94 Land at Bankpark Grove, Tranent, is allocated for circa 80 homes. Cumulative impacts on the capacity of signals at the Edinburgh Road junction and on education capacity including at Windygoul Primary School, and wider traffic and air quality considerations will require

mitigation. Structural landscape planting and open space provision would be required to integrate this site with the surroundings.

PROP TT5: Bankpark Grove, Tranent

Land at Bankpark Grove, Tranent is allocated for a residential development of circa 80 homes. A comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Employment Proposal: Kingslaw, Tranent

- 2.95 Approximately 4.4ha of land at Kingslaw is allocated for employment on the east side of Tranent. Landscaping will be required at the site boundaries to integrate this development with the surroundings as well as the new urban edge created by the Muirpark affordable housing site opposite, which has provided a roundabout access to the Kingslaw site.

PROP TT6: Kingslaw, Tranent

Approximately 4.4ha of land at Kingslaw, Tranent is allocated for employment uses. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on air quality as appropriate. Policy EMP1 applies.

Housing Proposal: Macmerry North

- 2.96 Land at Macmerry North is allocated for around 150 homes. Development of this site will continue the northern expansion of the settlement but retain a setting between it and the A1(T). The allocation is subject to suitable landscape proposals and mitigation of any development related impacts as appropriate, including cumulative impact on Tranent High Street (including air quality) and education capacity. Connections should be made to Greendykes Road and Chesterhall Avenue. Structural landscape planting and open space provision will be required to integrate this site with the surroundings and to provide a setting for the settlement.

PROP TT7: Macmerry North

Land at Macmerry North is allocated for around 150 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Employment Proposal: Macmerry Business Park East

- 2.97 Approximately 15ha of land is allocated for employment on the east side of Macmerry Industrial Estate to provide a new business park close to the Gladsmuir junction of the A1(T). The site would be suitable for business uses, including general industrial uses, subject to confirmation of ground conditions, access and suitable landscape treatment

PROP TT8: Macmerry Business Park East

Approximately 15ha of land at Macmerry Business Park East is allocated for employment. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on air quality as appropriate. Policy EMP1 applies.

Housing Proposal: Gladsmuir East

- 2.98 Land to the east of Gladsmuir is allocated for around 20 homes. The site represents a logical expansion of the village and is bounded to the east by a tree belt. The land to the north closer to the A1(T) should remain open and undeveloped to retain a separation between the village and the road. A masterplan for the site will be required to integrate the site with the village and the surrounding landscape.

PROP TT9: Gladsmuir East

Land at Gladsmuir is allocated for around 20 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Tynemount West, Ormiston

- 2.99 Land at Tynemount West, Ormiston, is allocated for around 70 homes to complete a logical westwards expansion of the village, subject to access and cumulative impacts on education, traffic and air quality. Land to the east has planning permission and this has commenced in part. A suitable masterplan to integrate this additional site as part of development in the wider area will be required. Site access to the local road network should be possible. Structural landscape planting and open space provision would be required to integrate this site with the surroundings, particularly at the western boundary to emulate the existing urban edge to the south

PROP TT10: Tynemount West, Ormiston

Land at Tynemount West, Ormiston is allocated for around 70 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Elphinstone West

- 2.100 Land at Elphinstone West is allocated for around 80 houses. The encroachment of built development on to the rising land to the north must be minimised where woodland planting must be provided to expand the existing shelter belt to the east and to contribute to Green Network objectives. There is also scope to accommodate open space to the north of the site and to ensure it connects with the existing open space on Main Street and the adjacent playing field. Structural landscape planting would be required to integrate this site with the surroundings. Provision should also be made within the site for turning and parking areas for the existing playing field to the west of the site.

PROP TT11: Elphinstone West

Land at Elphinstone West is allocated for around 80 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Woodhall Road, Wester Pencaitland

- 2.101 Land at Woodhall Road, Wester Pencaitland, is allocated for around 16 homes as a small scale development to the west of the existing housing area. This would be subject to

provision of additional education capacity if required. A suitable masterplan to integrate this site with its surroundings would be required.

PROP TT12: Woodhall Road, Wester Pencaitland

Land at Woodhall Road, Wester Pencaitland is allocated for around 16 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Lempockwells Road, Wester Pencaitland

- 2.102 Land at Lempockwells Road, to the south of Wester Pencaitland, is allocated for around 120 homes to reflect a planning appeal decision.

PROP TT13: Lempockwells Road, Wester Pencaitland

Land at Lempockwells Road, Wester Pencaitland is allocated for around 120 homes to reflect a planning appeal decision. Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Park View, Easter Pencaitland

- 2.103 Land at Park View, to the north of Easter Pencaitland, was allocated by the previous local plan for 30 homes. Further feasibility work suggests the allocated site has capacity for circa 55 homes. Sensitive design will be required to minimise impacts on the Winton House Designed Landscape and Pencaitland Conservation Area. The site is largely in the Council's ownership and it will seek to maximise the amount of affordable housing that is delivered on the site. A masterplan for the site will be required.

PROP TT14: Park View, Easter Pencaitland

Land at Park View, Easter Pencaitland is allocated for circa 55 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Humbie North

- 2.104 Land to the north of Humbie is allocated for around 20 homes and represents a logical expansion of the settlement. Access can be taken from Kippithill, and connections to and the expansion of the existing open space to the south east is required. A masterplan for the site will be required to integrate the site with the settlement and the surrounding landscape.

PROP TT15: Humbie North

Land at Humbie is allocated for around 20 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Housing Proposal: Dryden Field, East Saltoun

- 2.105 Land to the south east of East Saltoun, known as Dryden Field, is allocated for around 50 homes. The site represents a logical expansion of the village. A masterplan for the site will be required to integrate the site with the village and the surrounding landscape, including in longer distance views, and to minimise impacts on the East Saltoun Conservation Area. Land at the eastern edge of the site could be used for Green Network development and structural landscaping.

PROP TT16: East Saltoun

Land at Dryden Field, East Saltoun is allocated for around 50 homes. A design solution for the site that conforms to the Council's Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network, on education and community facilities, and on air quality as appropriate.

Other Employment or Housing Sites in the Tranent Area

- 2.106 There are a number of other employment or housing sites in the Tranent area that although are important are nonetheless of a scale that does not justify a specific proposal as part of the main spatial strategy. Some of these development sites were allocated by previous local plans or form part of the established housing or economic land supply because they are windfall proposals that have planning permission. Some of these sites are

also under construction but not yet complete. The Council continues to support the development of these sites.

- 2.107 As such, Table EMP1: Employment Proposals by Cluster Area and Table HOU1: Housing Proposals by Cluster Area set out the full range of sites the development of which is supported for economic or residential development respectively in each cluster. These sites are also illustrated on the relevant inset map of the Proposals Map where relevant. Sites that are included with these tables may also be subject to Development Briefs and this is indicated in the relevant table, together with the Local Development Plan policies that apply to the site where relevant.

Development Briefs

- 2.108 The Council has adopted as supplementary planning guidance development briefs for allocated sites that set out design principles to guide development proposals. Where there is a need for a site to conform to the relevant development brief this is indicated in the respective proposal.

Policy TT16: Development Briefs

As part of any planning application for any allocated site, comprehensive masterplan solutions for the entire allocated site must be submitted. Proposed masterplans must conform to the relevant Development Brief prepared for the site.

Proposed masterplans must demonstrate how the relevant objectives for the allocated site will be secured, how development will be delivered on an appropriate phased basis, and set out design requirements to ensure the development will properly integrate with its surroundings and the character of the local area.

Spatial Strategy for the Haddington Cluster

Proposals - Haddington Cluster	
Letham Mains, Haddington	Prop HN1
Letham Mains South West Field, Haddington	Prop HN2
Land at Dovecot, Haddington	Prop HN3
Land at Gateside East, Haddington	Prop HN4
Land at Gateside West, Haddington	Prop HN5
Gateside West, Haddington	Prop HN6
Land at Alderston, Haddington	Prop HN7
Land at Pepperkraig, Haddington	Prop HN8

Introduction

- 2.109 Haddington is within the eastern part of the East Lothian Strategic Development Area, and is the most accessible settlement within the cluster. The remaining settlements within the cluster are not within the East Lothian SDA.

Growing Our Communities

- 2.110 Haddington Town Centre will continue to be the focus for active land uses in the cluster, such as retail, commercial and business uses: local centres at Letham Mains and Gifford will be important locations for such uses but will be subservient to the town centre. The other smaller settlements benefit from mixed use areas or local shops that will be protected. The reuse of urban brownfield land or existing buildings will be prioritised, yet there are few such opportunities, particularly in the centres. While recognising the town centre first principle, the spatial strategy carries forward existing allocations and the established housing land supply and seeks to deliver additional sites for employment and housing as well as any necessary additional supporting infrastructure capacity. New local centres will also be introduced.
- 2.111 At Haddington, the mixed use site at Letham Mains will be the focus for strategic scale development. This allocation will provide a new distributor road linking the B6471 and A6093 to ensure traffic does not route through the town centre to access the A1(T). A new primary school will be provided at the site for the development, and school's consultation will be required to include within its catchment area the Letham Mains expansion land. The approved masterplan for the site may also need to be modified to accommodate a westward expansion of the new primary school campus: alternatively, development of the expansion land may need to be delayed until capacity becomes available at the new primary school. Development of the Letham expansion area will only be supported following completion of the primary school and distributor road through the wider site.
- 2.112 Two further housing sites are also allocated, one at Dovecot and one at Alderston. A further two mixed use employment and housing sites are allocated at Gateside East and Gateside West. A new employment site is allocated at Pepperraig East, bringing the town's northern urban boundary to the A1(T) to complement that created by the Alderston site to the west. The redevelopment of the site of Herdmanflatt Hospital and former Hopetoun Unit for housing would also be supported if these previously developed sites become surplus to NHS requirements during the life of this Plan.
- 2.113 In to the longer term, the only suitable location for a further significant expansion of Haddington may be in the wider Dovecot area. Education capacity in Haddington, particularly at primary level, is very constrained. Any further development at Dovecot

beyond the allocation of this Plan would need to find an education solution. The scale of development necessary to justify this would generate significant additional vehicle trips onto the road network. Whilst the new link road through the adjacent Letham Mains site once in place may help mitigate this, the ability to fully mitigate all transport impacts would need to be demonstrated to the Council's satisfaction.

Infrastructure and Resources

- 2.114 NHS Lothian will provide a new Community Hospital at Haddington on the site of the current Roodlands Hospital. Strategic mitigation of development related impacts on the trunk road will be required, including at Old Craighall Junction. The cumulative impact of development sites in the west of Haddington may result in significant traffic impact on the west Haddington/B6471 corridor and this will require to be modelled by developers wishing to develop on this corridor. Additional education capacity, new education facilities and school's consultations will be required. The implications of allocated sites in this area could be accommodated by Scottish Water, but enhancements will be required to strategic waste water assets to bring forward any additional development in the area.

Strategic Landscape Mitigation

- 2.115 Haddington developed on low-lying land beside a crossing of the River Tyne. This feature is intrinsic to the settlement's character and landscape setting. The A1(T) provides a robust boundary to the north; to the north-west the tree-lined access to Letham House provides a strong edge to the Letham Mains allocation, and is linked to other tree belts; to the south Clerkington is a designed landscape of regional or local importance that contributes to the setting of Haddington. The south-west edge of the town has now been extended into the Dovecot area. The land south of the Tyne from Clerkington to Seggarsdean, and land to the south and east of the Amisfield Estate, and the open land north of the Tyne are important areas to the town's character and setting. Land allocations for development now largely meet the boundaries within which the character and setting of the town can be conserved. A Countryside Around Town designation at Haddington has been introduced.
- 2.116 Strategic Green Network opportunities will be delivered, including within the Countryside Around Town Designation, to ensure Haddington retains its character and setting. This will also provide active travel opportunities to link Haddington to other places, including Longniddry Station. Opportunities for recreation and habitat creation and connection will be delivered as part of the multifunctional Green Network.

Haddington Cluster: Main Development Proposals

Mixed Use Proposal: Letham Mains, Haddington

2.117 Land at Letham Mains was allocated by the previous local plan for around 750 homes plus associated community facilities, including a new primary school and sports facilities, infrastructure and associated works. It shall be developed at an appropriate density to make good use of this accessible land, consistent with Policy DP3. There will be as part of the development provision of a new distributor road linking Haddington Road and Pencaitland Road. The Council is minded to grant detailed proposals for the site that indicate that the site has capacity for circa 800 homes. The Council continues to support the principles of development set out in the adopted Development Framework for the site and the masterplan it is minded to grant in association with the detailed proposals.

PROP HN1: Letham Mains, Haddington

Land at Letham Mains is allocated for a mixed use development of circa 800 homes plus education and community facilities, infrastructure and associated works. The Council is minded to grant planning permission for this development and an associated masterplan, to which any detailed development proposal for the allocated land must conform.

Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Letham Mains Expansion, Haddington

2.118 The 'South West Field' at Letham Mains is allocated for circa 275 homes. It shall be developed at an appropriate density to make good use of this accessible land, consistent with Policy DP3. This will form an extension of the original Letham Mains allocation (PROP HN1). Additional education capacity for this site shall be provided at the new Letham Mains Primary School once delivered and Knox Academy: it may be that to ensure additional primary education capacity can be provided for development of the south west field, current proposals for land to the west of the proposed primary school campus within the original allocation may need to be modified; alternatively, development of the expansion land will be delayed until capacity becomes available at the new primary school. Access shall be provided from the road layout internal to the original allocation and related proposals should allow for this. Development of the Letham expansion area will only be supported following completion of the primary school and distributor road through the

wider site. Structural landscape planting and open space provision should integrate this site with the surroundings and to provide a setting for the settlement and adjacent Letham Mains Smallholdings. A masterplan would be required which integrates the development with its surroundings and complements and does not undermine PROP HN1 or any associated masterplan or planning permission.

PROP HN2: Letham Mains Expansion, Haddington

Land at Letham Mains 'South West Field' is allocated for a development of circa 275 homes. A masterplan for the entire site will be required as part of any planning application, which must complement and not undermine the adjacent original Letham Mains allocation (PROP HN1) as well as conform to the relevant Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Dovecot, Haddington

2.119 Land at Dovecot on the south west of Haddington is allocated for circa 200 homes. The eastern part of this site already has planning permission for 113 homes and groundworks have commenced. The remainder of the site to the west can accommodate around 80 additional homes. Proposals for the western part of the site should complement and not undermine the development that has planning permission and is underway on the eastern part of the site. A complementary masterplan for the balance of the site will be required.

PROP HN3: Land at Dovecot, Haddington

Land at Dovecot is allocated for a development of circa 200 homes. Any further development here beyond the existing planning permission for 113 homes is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate. A comprehensive masterplan that conforms to the relevant Development Brief will be required.

Mixed Use Proposal: Gateside East, Haddington

2.120 Land at Gateside East in the west of Haddington is allocated for a mixed use housing and employment development, including circa 80 homes and around 1ha of employment land, to reflect existing planning permissions. Part of the development is now under construction.

PROP HN4: Land at Gateside East, Haddington

Land at Gateside East is allocated for a mixed use development, including circa 80 homes and around 1ha employment land, to reflect existing planning permissions. Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Mixed Use Proposal: Gateside West, Haddington

- 2.121 Land at Gateside West in the west of Haddington is allocated for a mixed use housing and employment development, including circa 110 homes and employment generating uses, including a pub/restaurant, to reflect existing planning permissions.

PROP HN5: Land at Gateside West, Haddington

Land at Gateside East is allocated for a mixed use development, including circa 110 homes and employment generating uses, to reflect existing planning permissions. Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Retail Proposal: Gateside West Haddington

- 2.122 Land at Gateside West is allocated for retail development. Planning permission is approved for a retail supermarket and associated development and this is included for information only.

PROP HN6: Gateside West, Haddington

Land at Gateside West is allocated for retail and associated development. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate. Policy EMP1 applies.

Housing Proposal: Alderston, Haddington

- 2.123 Land at Alderston on the north of Haddington, to the west of Aberlady Road, is allocated for 100 homes to reflect a planning appeal decision.

PROP HN7: Land at Alderston, Haddington

Land at Alderston is allocated for a development of 100 homes to reflect a planning appeal decision. Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Employment Proposal: Peppercraig East, Haddington

- 2.124 Land at Peppercraig East, between Aberlady Road and the slip road on to the A1 at the Abbot's view junction, is allocated for employment uses. Policy EMP1 will apply. Access should be taken from the A199 and some improvements will be required including provision of a footway, crossing facilities, street lighting and a reduced speed limit on the A199. This site would be suitable for business, hotel and leisure uses. The site will require a programme of archaeological works prior to development and shelterbelt planting to mitigate the impact of development on the site.

PROP HN8: Land at Peppercraig East, Haddington

Approximately 7ha of land is allocated at Peppercraig East for employment uses. Any new development proposals for the site must include a comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate. Policy EMP1 applies.

Other Employment or Housing Sites in the Haddington Area

- 2.125 There are a number of other employment or housing sites in the Haddington area that although are important are nonetheless of a scale that does not justify a specific proposal as part of the main spatial strategy. Some of these development sites were allocated by previous local plans or form part of the established housing or economic land supply because they are windfall proposals that have planning permission. Some of these sites are

also under construction but not yet complete. The Council continues to support the development of these sites.

- 2.126 As such, Table EMP1: Employment Proposals by Cluster Area and Table HOU1: Housing Proposals by Cluster Area set out the full range of sites the development of which is supported for economic or residential development respectively in each cluster. These sites are also illustrated on the relevant inset map of the Proposals Map where relevant. Sites that are included with these tables may also be subject to Development Briefs and this is indicated in the relevant table, together with the Local Development Plan policies that apply to the site where relevant.

Development Briefs

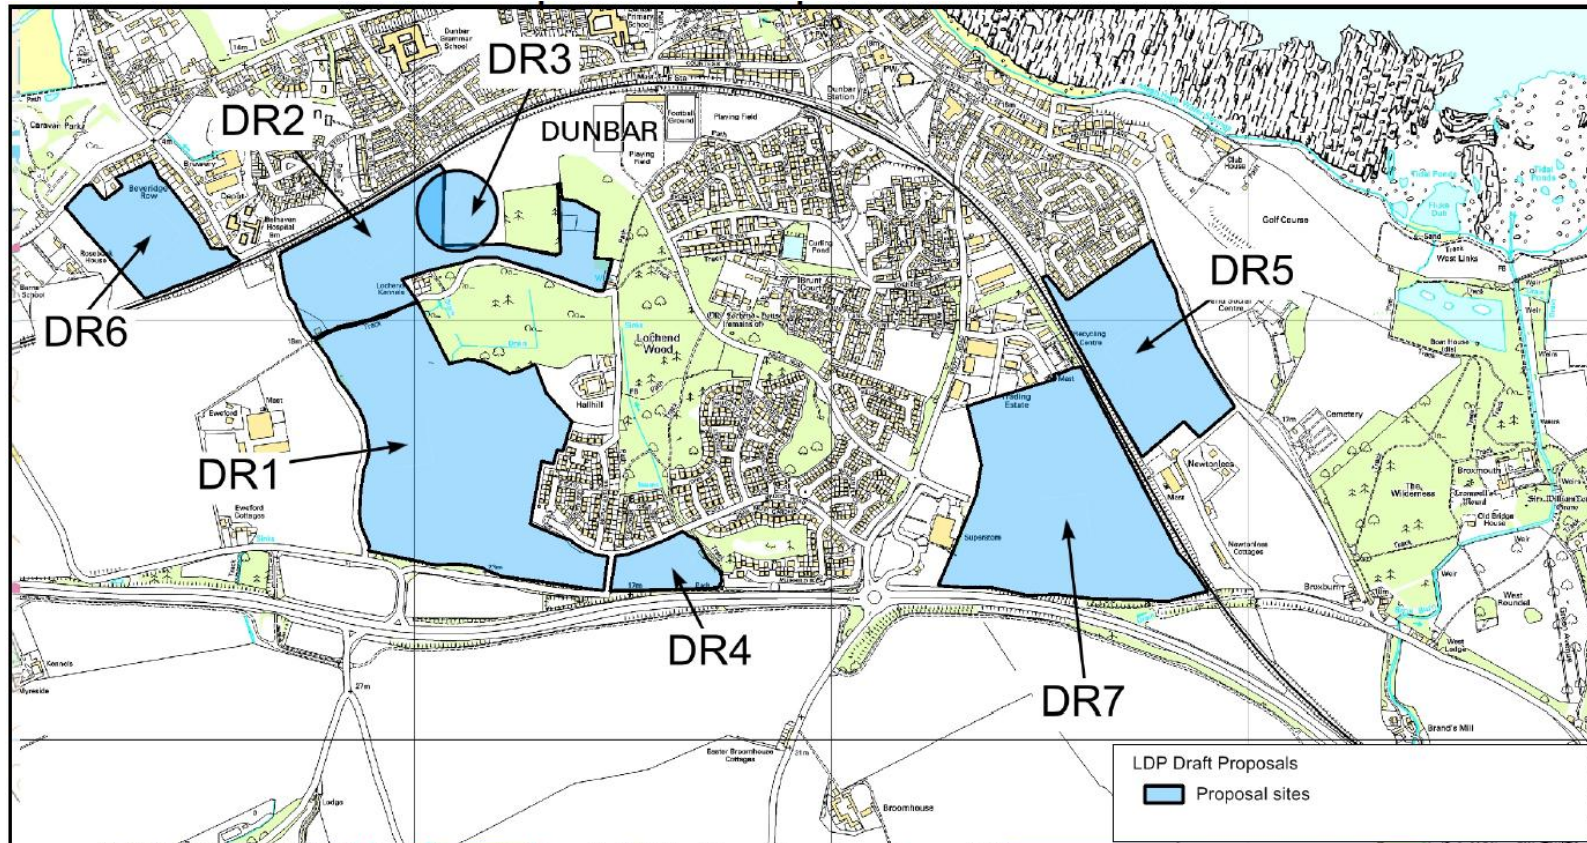

- 2.127 The Council has adopted as supplementary planning guidance development briefs for allocated sites that set out design principles to guide development proposals. Where there is a need for a site to conform to the relevant development brief this is indicated in the respective proposal.

Policy HN9: Development Briefs

As part of any planning application for any allocated site, comprehensive masterplan solutions for the entire allocated site must be submitted. Proposed masterplans must conform to the relevant Development Brief prepared for the site.

Proposed masterplans must demonstrate how the relevant objectives for the allocated site will be secured, how development will be delivered on an appropriate phased basis, and set out design requirements to ensure the development will properly integrate with its surroundings and the character of the local area.

Spatial Strategy for the Dunbar Cluster

Proposals -Dunbar Cluster	
Hallhill South West, Dunbar	Prop DR1
Hallhill North, Dunbar	Prop DR2
Dunbar Primary (Lochend) Expansion Land (indicative)	Prop DR3
Brodie Road, Dunbar	Prop DR4
Land at Newtonlees, Dunbar	Prop DR5
Beveridge Row, Belhaven, Dunbar	Prop DR6
Land at Spott Road, Dunbar	Prop DR7
Penraig Hill, East Linton	Prop DR8
Land at East Linton Auction Mart	Prop DR9
Innerwick East, Innerwick	Prop DR10
St John St, Spott	Prop DR11

Introduction

- 2.128 Dunbar / Belhaven, West Barns, East Linton are the most accessible settlements within the cluster. These settlements together with Innerwick are within the eastern part of the East Lothian Strategic Development Area. The remaining settlements are not within the East Lothian SDA.

Growing Our Communities

- 2.129 Dunbar Town Centre will continue to be the focus for active land uses in the cluster, such as retail, commercial and business uses: local centres at East Linton, West Barns and Spott Road will be important locations for such uses but will be subservient to the town centre. The other smaller settlements benefit from mixed use areas or local shops that will be protected. The reuse of urban brownfield land or existing buildings will be prioritised, yet there are few such opportunities, particularly in the centres. While recognising the town centre first principle, the spatial strategy carries forward existing allocations and the established housing land supply and seeks to deliver additional sites for employment and housing as well as any necessary additional supporting infrastructure capacity. New local centres will also be introduced.
- 2.130 At Dunbar, the Hallhill South West site will be the focus for strategic housing development. This site will provide a northern extension of Brodie Road to link to Spott Road and the A1(T). This is to ensure traffic does not route through the town. This road will connect to the Hallhill North housing site, which can be developed when the new link road is complete. Land will also be safeguarded in the Hallhill North site for an extension of Dunbar Primary School. Land at Brodie Road is also allocated for housing. To the east, land at Newtonlees North is allocated for housing and its southern part would also be suitable for some employment or community use, and a pedestrian connection underneath the rail line will be provided from this site through the Spott Road employment allocation. Approximately 21ha of employment land at Spott Road will be retained for employment use, with a part of the wider site also designated as a local centre. Land at Beveridge Row is allocated for housing. At East Linton, the former Auction Mart site is a brownfield site allocated for employment uses and land at Pencraig Hill is allocated for housing. At Innerwick, land is allocated for housing at Kirk Brae. At Spott, land is allocated for housing at St John's Road.
- 2.131 In to the longer term, land at Eweford Farm may be considered suitable as a mixed use expansion area. Matters to be resolved include the means of access to the site, in particular how this might be provided without adding additional vehicle journeys to Spott Road. Additional connections may be considered to Thistly Cross roundabout. A second vehicle access may need to be provided over the East Coast Main Line where it is in

cutting. This would provide a vehicular access into Dunbar from the A1 Expressway over the East Coast Main Line to connect with Edinburgh Road. In terms of education provision, solutions would need to be found, and these may offer scope for such a new road alignment. Dunbar Grammar would also require to be expanded. To allow for this the relocation of sports pitches south of the rail line to the Dunbar Healthy Living Centre or adjacent to Dunbar Primary School is likely.

Infrastructure and Resources

- 2.132 At East Linton land is safeguarded for a new rail station and car park expansions and platform improvements at Dunbar Station are supported. Strategic mitigation of development related impacts on the trunk road will be required, including at Old Craighall Junction. There are also concerns about the capacity of Spott Road and Queens Road junction in Dunbar. The provision of additional pedestrian and cycle access between the northern and southern parts of the town separated by the rail line will be required: the re-opening of an existing underpass will be required to the west of the town in association with development at Hallhill North; a new foot and cycle path shall be provided through the Spott Road employment site in association with development at Newtonlees. Additional education capacity will be required. The implications of the allocated sites on this area could be accommodated by Scottish Water, which has initiated a growth project, but enhancements will be required to strategic waste water assets to bring forward any additional development in the area.

Strategic Landscape Mitigation

- 2.133 In terms of the setting and separate identities of settlements, some physical and visual separation between Dunbar / Belhaven and West Barns must be retained. This is particularly important in respect of the remaining open land between Beveridge Row, Dunbar / Belhaven and West Barns. Similarly, East Linton developed in a low topographical feature / river valley and recent housing allocations there have sought to contain the settlement within this landscape feature. As such, Countryside Around Town designations are made in these locations.
- 2.134 Strategic Green Network opportunities will be delivered, including within Countryside Around Town Designations, to ensure Dunbar / Belhaven and West Barns retain their special character and identities and so the setting of East Linton is conserved. This will also provide active travel opportunities to provide links to other places. Opportunities for recreation and habitat creation and connection will be delivered as part of the multifunctional Green Network.

Natural and Cultural Heritage

- 2.135 The sites of the Battles of Dunbar 1 and 2 are designated, as identified by the National Inventory.

Dunbar Cluster: Main Development Proposals

Housing Proposal: Hallhill South West, Dunbar

2.136 Land at Hallhill South West, Dunbar was allocated by the previous local plan for a housing development incorporating approximately 500 homes, infrastructure and associated works. It shall be developed at an appropriate density to make good use of this accessible land, consistent with Policy DP3. The Council has approved planning permissions for a large proportion of the allocated land, including detailed proposals and development is under construction. The Council continues to support the principles of development as set out in the approved masterplan for the Hallhill South West site.

PROP DR1: Hallhill South West, Dunbar

Land at Hallhill South West, Dunbar is allocated for a housing development incorporating circa 500 homes, infrastructure and associated works. Planning permission has been approved for this development, which is under construction. The Council has approved an associated masterplan, to which any detailed development proposal for the allocated land must conform.

Housing Proposals: Hallhill North, Dunbar

2.137 Land at Hallhill North is allocated for circa 250 homes as an extension to the existing allocated site at Hallhill South West. It shall be developed at an appropriate density to make good use of this accessible land, consistent with Policy DP3. Its adjacency to the north of this existing allocated site makes it a logical extension and continuation of that development area. Vehicular access to this site must only be taken from the existing Hallhill site to the south west. Pedestrian and cycle routes must also be provided to connect the site to other parts of the wider Hallhill development area, and to parts of the town to the north of the rail line.

PROP DR2: Hallhill North, Dunbar

Land at Hallhill North is allocated for a housing development incorporating circa 250 homes, the expansion of Dunbar Primary School campus as well as other community uses, infrastructure and associated works. A comprehensive masterplan for this site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

2.138 As part of this housing land allocation land within the Hallhill North site is also allocated for an expansion of the adjacent Dunbar Primary (Lochend) School campus. This is to make provision for additional primary education capacity in the schools' catchment area.

PROP DR3: Dunbar Primary (Lochend Campus) Expansion Land

Land to the west of the current Dunbar Primary (Lochend) School Campus is allocated for any potential future expansion of Dunbar Primary School. Policy SECF1 applies.

Housing Proposal: Brodie Road, Dunbar

2.139 Land at Brodie Road is allocated for circa 50 homes. The site is located between Brodie Road and the A1 and would be a logical addition to the existing allocated housing site at to the north and west at Hallhill. Vehicular access should be taken from Brodie Road and pedestrian and active travel links with the surrounding area should be made. Any requirement for noise mitigation to address noise from the A1 must be investigated.

PROP DR4: Brodie Road, Dunbar

Land at Brodie is allocated for a residential development of circa 50 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Land at Newtonlees, Dunbar

2.140 Land at Newtonlees North is allocated for circa 250 homes and its southern part would also be suitable for some employment or community use. Vehicular access is possible off A1087. Mitigation of development related impacts, including on the local road network, particularly on the Spott Road and Queens Road junction, will be required. Provision must be made by any proposal for the delivery of a footpath across the adjacent employment land at Spott Road via the underpass of the East Coast Main Rail line. Structural landscape planting and open space provision is required to integrate this site with the surroundings and to provide a setting for the settlement.

PROP DR5: Land at Newtonlees, Dunbar

Land at Newtonlees is allocated for a residential development of circa 250 homes and its southern part would also be suitable for some employment or community use. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be

required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Beveridge Row Belhaven, Dunbar

- 2.141 Planning permission has been approved on appeal for a residential development of circa 90 homes on land at Beveridge Row Belhaven, Dunbar. This allocation reflects that appeal decision. A substantial liner parkland must be provided at the western boundary of the site to ensure a separation is retained between Belhaven and West Barns; this area shall be included within a Countryside Around Town designation. Access should be taken from the A1087 Edinburgh Road, but suitable pedestrian routes to the schools and the town beyond must be provided.

PROP DR6: Beveridge Row Belhaven, Dunbar

Land at Beveridge Row is allocated for a residential development of circa 90 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Employment Proposal: Spott Road, Dunbar

- 2.142 Land at Spott Road between Spott Road and the East Coast Main Line is allocated for employment uses. It extends from the older employment area immediately to its north. Part of the site was previously granted planning permission for a solar array which has since lapsed. The site is a strategic employment site as identified in the SDP. This land excludes the area used as a motorists service centre and including the supermarket and garden centre which is designated as a local centre. Appropriate landscape treatment will be required to the boundaries of the site to ensure the site fits into the wider landscape setting of the town.

PROP DR7: Land at Spott Road, Dunbar

Approximately 21 ha of land at Spott Road Dunbar is allocated for employment uses. Access will be from the existing access spur from Spott Road adjacent to the supermarket and garden centre. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any

development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate. Policy EMP1 applies.

Housing Proposal: Pencraig Hill, East Linton

- 2.143 Land at Pencraig Hill, East Linton, is allocated for circa 100 homes. The previous local plan allocated approximately 4 ha of land to the east of this site for housing and as part of that proposal safeguarded land for the delivery of a new rail station at East Linton. The Council has approved planning permissions, including detailed proposals, for the housing component of that scheme and is complete. Structural landscape planting and open space provision is required to integrate this site with the surroundings and to provide and conserve a setting for the settlement.

PROP DR8: Pencraig Hill, East Linton

Land at Pencraig Hill, East Linton is allocated for a residential development of circa 100 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Note: Land capable of accommodating a new railway station, car park and access is safeguarded adjacent to the East Coast Main Line at East Linton in accordance with Policy T12: Railway Station Safeguarding of this Plan. Development that would prevent the use of this land for a station will not be permitted.

Employment Proposal: Auction Mart, Haddington Road, East Linton

- 2.144 Approximately 1 ha of land at the Old Auction Mart, Haddington Road, East Linton is allocated for employment and community uses. The site contains the former animal auction mart, a category B listed building and the last of its kind in Scotland which should be restored and re-used as part of the development of the site. Policy EMP1 will apply.

PROP DR9: Land at East Linton Auction Mart

Approximately 1 ha of land at Haddington Road East Linton is allocated for employment and community uses. The category B listed old auction mart building must be restored and views of it from Haddington Road must be retained. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate. Policy EMP1 applies.

Housing Proposal: Innerwick East, Innerwick

- 2.145 Land at Innerwick East is a preferred land release. The allocation of land for approximately 18 houses immediately north of Kirk Brae, Innerwick. Access can be achieved from C125 with existing 30mph extended southwards. The site has good accessibility to the primary school. A suitable design to integrate this site as part of the settlement and local area would be required as would a masterplan.

PROP DR10: Innerwick East, Innerwick

Land at Innerwick East is allocated for a residential development of circa 18 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate.

Housing Proposal: St John's Street Spott

- 2.146 Land at St John's Street, Spott is allocated for circa 6 houses. Access should be achieved via St John's Street. A suitable masterplan design to integrate this site as part of the settlement and local area will be required

PROP DR11: St John's Street, Spott

Land at St John's Street, Spott is allocated for a residential development of circa 6 homes. A masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network as appropriate.

Other Employment or Housing Sites in the Dunbar Area

- 2.147 There are a number of other employment or housing sites in the Dunbar area that although are important are nonetheless of a scale that does not justify a specific proposal as part of the main spatial strategy. Some of these development sites were allocated by previous local plans or form part of the established housing or economic land supply because they are windfall proposals that have planning permission. Some of these sites are also under construction but not yet complete. The Council continues to support the development of these sites.

- 2.148 As such, Table EMP1: Employment Proposals by Cluster Area and Table HOU1: Housing Proposals by Cluster Area set out the full range of sites the development of which is supported for economic or residential development respectively in each cluster. These sites are also illustrated on the relevant inset map of the Proposals Map where relevant. Sites that are included with these tables may also be subject to Development Briefs and this is indicated in the relevant table, together with the Local Development Plan policies that apply to the site where relevant.

Development Briefs

- 2.149 The Council has adopted as supplementary planning guidance development briefs for allocated sites that set out design principles to guide development proposals. Where there is a need for a site to conform to the relevant development brief this is indicated in the respective proposal.

Policy DR12: Development Briefs

As part of any planning application for any allocated site, comprehensive masterplan solutions for the entire allocated site must be submitted. Proposed masterplans must conform to the relevant Development Brief prepared for the site.

Proposed masterplans must demonstrate how the relevant objectives for the allocated site will be secured, how development will be delivered on an appropriate phased basis, and set out design requirements to ensure the development will properly integrate with its surroundings and the character of the local area.

Spatial Strategy for the North Berwick Cluster

North Berwick Cluster	
Mains Farm, North Berwick	Prop NK1
North Berwick High School and Law Primary School Expansion Land	Prop NK2
Gilsland, North Berwick	Prop NK3
Land at Tantallon Road, North Berwick	Prop NK4
Land at Ferrygate Farm	Prop NK5
Former Fire Training School, Gullane	Prop NK6
Saltcoats, Gullane	Prop NK7
Fentoun Gait East, Gullane	Prop NK8
Fentoun Gait South	Prop NK9
Aberlady West	Prop NK10
Castlemains Dirleton	Prop NK11

Introduction

- 2.150 North Berwick is the largest settlement in the cluster and it benefits from a rail station. Other than the very small settlement of Drem, which has a rail station, North Berwick, Gullane, Aberlady, Dirleton and the other settlements in the cluster are not within the SDA.

Growing Our Communities

- 2.151 North Berwick Town Centre will continue to be the focus for active land uses in the cluster, such as retail, commercial and business uses: local centres at Mains Farm, Gullane and Aberlady will be important locations for such uses but will be subservient to the town centre. The other smaller settlements benefit from mixed use areas or local shops that will be protected. The reuse of urban brownfield land or existing buildings will be prioritised, yet there are few such opportunities, particularly in the centres. While recognising the town centre first principle, the spatial strategy carries forward existing allocations and the established housing land supply and seeks to deliver additional sites for employment and housing as well as any necessary additional supporting infrastructure capacity. New local centres will also be introduced.
- 2.152 At North Berwick, the mixed use site at Mains Farm will be the focus for strategic scale development in the town. Land to the east of this site is safeguarded for an expansion of North Berwick High School. A housing site at Ferrygate Farm is allocated, and a mixed use employment and housing site is allocated at Tantallon Road. At Gullane, the former Fire Service College site is a brownfield housing site. Land at Saltcoats Field is allocated for housing, and the Gullane Primary School campus and the adjoining public open space could be expanded in to the western part of this site. On the eastern edge of Gullane, two sites are allocated for housing at Fentoun Gait South and East. At Aberlady, a housing allocation to the west will provide a road through the site to the A198 to allow traffic from housing areas to route away from Aberlady Primary School. A small site for housing is allocated at Castlemains Place, Dirleton, to the south of which land will remain free of built development to safeguard the setting of and views to and from Dirleton Castle.
- 2.153 Drem is within the SDA and benefits from a railway station on the East Coast Main Line, but this is served only by local train services. It also has very limited public transport accessibility by other modes, and very limited facilities. The local road network at Drem is inadequate for significant growth. However, in the long term, a significant scale of mixed use development here may present an opportunity for road realignment and the relocation of Drem station. Primary education solutions would be required together with additional campus land at North Berwick High School.

Infrastructure and Resources

- 2.154 In North Berwick foul drainage capacity is a significant issue beyond existing commitments in the drainage catchment area, which includes Dirleton. There is a considerable funding requirement and lead-in timescale to secure the delivery of a solution that would allow further significant development in this area. Additional education capacity will be required. In North Berwick, Haddington Road is to be realigned in association with the Mains Farm development and to provide additional primary school capacity to accommodate committed development, and the land required for this is safeguarded for these purposes. Similarly, land is also safeguarded for an expansion of North Berwick High School.
- 2.155 North Berwick experiences significant visitor numbers, particularly during summer months and traffic and parking management measures are being considered. However, the most significant issue is the impact that additional development in the area would have on the local road network. A number of these roads also provide access to and through coastal and inland settlements. The impact of through traffic is a related concern. Strategic mitigation of development related impacts on the road network will be required, including at Old Craighall Junction.

Strategic Landscape Mitigation

- 2.156 Separation between North Berwick Law and the southern urban edge of the town will be retained. This is to reflect the recreational value of the Law, that it is a landmark, that parts of it are a Scheduled Monument and a Site of Special Scientific Interest and to complement the large area of parkland to be provided to the south of the nearby Mains Farm site. This, in combination with the network of core paths and rights of way, is an opportunity to promote an extended area with long term recreational value. The eastern approach to North Berwick includes coastal and countryside views, including of the Law that are part of the landscape setting of the town. The coastal villages of Aberlady, Dirleton and Gullane also have their own unique character and sensitive landscape settings. As such, Countryside Around Town designations have been made in these locations.
- 2.157 Strategic Green Network opportunities will be delivered, including within the Countryside Around Town Designations, to ensure the character and setting of these areas is retained. This will also provide active travel opportunities to link these settlements to other places, including Drem Station. Opportunities for recreation and habitat creation and connection will be delivered as part of the multifunctional Green Network.

North Berwick Cluster: Main Development Proposals

Mixed Use Proposal: Mains Farm, North Berwick

- 2.158 Land at Mains Farm, North Berwick was allocated by the previous local plan for a mixed use development including circa 400 homes, community facilities, infrastructure and associated works. It shall be developed at an appropriate density to make good use of this accessible land, consistent with Policy DP3. A key requirement of this proposal is the realignment of Haddington Road to allow for the expansion of Law Primary School campus, and the land required for this is safeguarded for these purposes. Land is also safeguarded for an expansion of North Berwick High School, part of which will be required to deliver sites brought forward by previous plans. To the south of this site the approved masterplan also provides for a large area of parkland, which this Plan designates as open space.
- 2.159 The Council has approved planning permissions and a masterplan for the land at Mains Farm as well as detailed proposals for part of the site, which are now under construction. The Council continues to support the principles of development as set out in the approved masterplan for the Mains Farm site.

PROP NK1: Mains Farm, North Berwick

Land at Mains Farm, North Berwick is allocated for a mixed use development including circa 420 homes, community uses, infrastructure and associated works, including the realignment of Haddington Road. Planning permission has been approved for this development, which is under construction. The Council has approved an associated masterplan, to which any detailed development proposal for the allocated land must conform.

- 2.160 North Berwick High School and Law Primary School will become landlocked once the Mains Farm site and Haddington Road realignment are complete. North Berwick High School may experience more future demand for pupil places beyond that needed to accommodate known housing commitments, and further expansion land may be required. Land to the west of North Berwick High School is allocated for a potential further future expansion of the school and its campus. Land to the south of Law Primary School is allocated for a realignment of Haddington Road and for the expansion of the Law Primary School campus.

PROP NK2: North Berwick High School and Law Primary School Expansion Land

Land to the west of the current North Berwick High School campus is allocated for potential further future expansion of North Berwick High School. Land to the south of Law Primary School is allocated for expansion of Law Primary School, and for the realignment of Haddington Road. Policy SECF1 applies. Development that would undermine the Haddington Road realignment will not be supported.

Housing Proposal: Gilsland, North Berwick

- 2.161 Land at Gilsland, North Berwick was allocated by the previous local plan for a residential development including circa 100 homes, infrastructure and associated works. The Council has approved planning permissions and a masterplan for the land at Gilsland as well as detailed proposals for parts of the site, which are now under construction and are nearing completion. The Council continues to support the principle of development as set out in the approved masterplan for the Gilsland site.

PROP NK3: Gilsland, North Berwick

Land at Gilsland, North Berwick is allocated for residential development including circa 120 homes, community uses, infrastructure and associated works. Planning permission has been approved for this development, which is under construction. The Council has approved an associated masterplan, to which any detailed development proposal for the allocated land must conform.

Mixed Use Proposal: Tantallon Road, North Berwick

- 2.162 Land at Tantallon Road on the eastern edge of North Berwick is allocated for a mixed use housing and economic development, incorporating circa 100 homes and employment and commercial land. The housing development should be used to enable the servicing of the employment and commercial land. The site is adjacent to an existing employment area and the disposition of land uses within the site must allow for an extension of the operational employment land. The means of site access for the employment and commercial land must be resolved. Landscape impact and impacts on the setting of the settlement and on North Berwick Law are also key considerations.

PROP NK4: Land at Tantallon Road, North Berwick

Land at Tantallon Road, North Berwick is allocated for a mixed use development incorporating circa 100 homes, employment and commercial uses, infrastructure and associated works. A comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief will be required as part of any planning application for this site. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Ferrygate Farm, North Berwick

- 2.163 Planning permission has been approved on appeal for a residential development of 140 homes on land at Ferrygate farm, North Berwick. The outcome of another planning appeal proposing a residential development of 140 dwellings on the site in a different form of development than the allowed appeal is also awaited. Access can be taken from the A198. Suitable active travel routes to school and rail station will be required.

PROP NK5: Land at Ferrygate Farm, North Berwick

Land at Ferrygate Farm, North Berwick is allocated for a residential development including circa 140 homes, infrastructure and associated works. Should any new proposal be submitted for the site, a comprehensive masterplan for the entire allocated site that conforms to the Council's Development Brief will be required as part of any such planning application. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Former Fire Training School, Gullane

- 2.164 Operations have now ceased at the former Fire Service Training School in Gullane and it is brownfield land. The site is allocated for circa 100 homes, and is additionally suitable for some employment and tourism uses which may form part of a mixed use, housing-led proposal. Muirfield Lodge, formally the Marine Hotel, is located within the site and dates from the early 20th century. It is important to the character of the local area and is of architectural and historic merit, and may accommodate some mixed use development. Proposals for the redevelopment of this site must seek to retain and reuse this attractive building, which may be appropriate for some commercial, tourism or employment use as well as residential. A masterplan for the entire allocated site will be required to accompany any planning application for the allocated land.

PROP NK6: Former Fire Training School, Gullane

The closure of the Gullane Fire Training School presents a brownfield redevelopment opportunity for circa 100 homes and is additionally suitable for some employment and tourism uses. A vehicular route between the C111 and Muirfield Drive must be provided through the site. A masterplan for the site would be required. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Saltcoats, Gullane

- 2.165 Land at Saltcoats Gullane is allocated for circa 130 homes. This site allows for a southern expansion of the settlement, and for provision of expanded education and open space facilities. Development to the south of the existing housing areas here would mirror the settlement pattern to the north of High Street. Land to the west of this allocation could provide for an expansion of the existing open space and primary school. Access to the housing site may be taken from the east, and pedestrian links provided from the site's northern boundary to the existing urban area, including to the open space and primary school. Appropriate structural landscape planting and open space provision would be required to integrate this site with the surroundings and to provide a setting for the settlement, particularly at the western, southern and eastern boundaries.

PROP NK7: Saltcoats, Gullane

Land at Saltcoats, Gullane is allocated for a residential development of circa 130 homes and the expansion of the primary school campus and provision of other community uses, infrastructure and associated works as required. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Fenton Gait East, Gullane

- 2.166 Land at Fentoun Gait East, Gullane is allocated for housing development of circa 50 homes. The land is important to the setting of Gullane, and is located to the south of Greywalls Garden and Designed Landscape and a number of Category A listed buildings. Open views southwards from these gardens and buildings over the site and across it to the Garleton and Lammermuir hills were intentionally framed to form their principal vistas. However, a limited scale of housing development would be possible without adversely affecting these views. This would only be the case if new development were to read as a continuation of the existing housing to the west at Fenton Gait, and if it were to align with the existing settlement edge to the north of the A198 at Duncur Road. An appropriately designed access to the site must also be provided. Structural landscape planting will be required to help integrate development with the surroundings, as will a substantial linear parkland to the east of the site.

PROP NK8: Fenton Gait East, Gullane

Land at Fenton Gait East, Gullane is allocated for a residential development of circa 50 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any

development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Fenton Gait South, Gullane

- 2.167 Land at Fentoun Gait South to the east of Gullane is allocated for a residential development of circa 15 homes. This site would be a continuation of the existing development, set back from the Greywalls key view corridor (see preamble to PROP NK8). Access issues would need to be resolved and structural landscape planting would be required to help integrate development with the surroundings.

PROP NK9: Fenton Gait South, Gullane

Land at Fenton Gait East, Gullane is allocated for a residential development of circa 15 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Aberlady West, Aberlady

- 2.168 Aberlady West is allocated for circa 100 homes. A prerequisite of this proposal is to provide a new link road through the site to connect Kirk Road with the A198, utilising the existing priority junction at The Pleasance to avoid traffic passing the primary school from the new housing area. This will minimise the disruption to protected trees along the roadside boundary, which are an important part of the character of the coastal route and the approach to the settlement. Structural landscape planting is required to help integrate development with the surroundings.

PROP NK10: Aberlady West, Aberlady

Land at Aberlady West, Gullane is allocated for a residential development of circa 100 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Housing Proposal: Castlemains, Dirleton

- 2.169 Land at Castlemains Place Dirleton is allocated for a residential development of circa 30 homes. Access can be provided from Castlemains Place, and will not be permitted from Station Road. While this area is open, is part of the setting of the settlement and provides for open views to Dirleton castle on approach to the settlement, the allocated site can be developed without harming these characteristics. However, appropriate design and landscape planting and open space provision will be required to integrate development on this site with the surroundings and to provide a setting for the settlement, including the retention of views to Dirleton Castle.

PROP NK11: Castlemains, Dirleton

Land at Castlemains, Dirleton is allocated for a residential development of circa 30 homes. A comprehensive masterplan for the entire allocated site that conforms to the relevant Development Brief will be required. Any development here is subject to the mitigation of any development related impacts, including on a proportionate basis for any cumulative impacts with other proposals including on the transport network and on education and community facilities as appropriate.

Other Employment or Housing Sites in the North Berwick Area

- 2.170 There are other employment or housing sites in the North Berwick area that although are important are nonetheless of a scale that does not justify a specific proposal as part of the main spatial strategy. Some of these development sites were allocated by previous local plans or form part of the established housing or economic land supply because they are windfall proposals that have planning permission. Some of these sites are also under construction but not yet complete. The Council continues to support the development of these sites.
- 2.171 As such, Table EMP1: Employment Proposals by Cluster Area and Table HOU1: Housing Proposals by Cluster Area set out the full range of sites the development of which is supported for economic or residential development respectively in each cluster. These sites are also illustrated on the relevant inset map of the Proposals Map where relevant. Sites that are included with these tables may also be subject to Development Briefs and this is indicated in the relevant table, together with the Local Development Plan policies that apply to the site where relevant.

Development Briefs

- 2.172 The Council has adopted as supplementary planning guidance development briefs for allocated sites that set out design principles to guide development proposals. Where there is a need for a site to conform to the relevant development brief this is indicated in the respective proposal.

Policy NK12: Development Briefs

As part of any planning application for any allocated site, comprehensive masterplan solutions for the entire allocated site must be submitted. Proposed masterplans must conform to the relevant Development Brief prepared for the site.

Proposed masterplans must demonstrate how the relevant objectives for the allocated site will be secured, how development will be delivered on an appropriate phased basis, and set out design requirements to ensure the development will properly integrate with its surroundings and the character of the local area.

GROWING OUR ECONOMY & COMMUNITIES

General Urban Development Policies

Background

3.1 One of the ways this plan seeks to grow East Lothian's economy is by encouraging employment generating development in town centres and on existing and proposed employment and business sites. Delivery of such development is key to securing economic growth and job creation. The plan takes a practical and flexible approach to support a wide range of appropriate economic development uses in suitable locations whilst safeguarding existing business uses.

Town and Village Centres, Other Retail or Mixed Use Areas

3.2 East Lothian's town centres are a key element of the area's economic and social fabric, acting as service hubs for the areas around them and contributing to local identity. The Council supports the 'town centre first' principle, which promotes an approach to decision-making that considers the health and vibrancy of town centres. A key aim for the planning system is to ensure that new development (including changes of use) contributes to providing a range of uses within town centres that supports their vibrancy, vitality, and viability.

3.3 Six town centres are identified by the Plan on the Proposals Map: Musselburgh, Prestonpans, Tranent, Haddington, Dunbar, and North Berwick. A number of smaller local centres are also identified by the Plan on the Proposals Map; these perform a more localised and subsidiary role serving smaller catchments either in villages or in more peripheral locations within settlements: Pinkie, Delta Drive, Olivebank and Stoneybank/Eskview Terraces at Musselburgh; Hawthorn Terrace at Prestonpans; Cockenzie and Port Seton; Longniddry; Ormiston; Gifford; East Linton; Spott Rd at Dunbar; and Gullane. New local centres are promoted in the Plan at Craighall and Goshen, Musselburgh, and at Wallyford, Letham Mains at Haddington and Mains Farm at North Berwick which are all included in large scale committed developments. Blindwells will also have a local centre in the context of the allocation for 1,600 homes.

3.4 A sequential 'town centre first' approach will be applied where appropriate to development proposals that would attract significant footfall. Such uses could include retail, commercial leisure uses, offices (class 2), community and cultural facilities, and potentially public buildings such as libraries, education and healthcare facilities. In the context of the sequential approach, 'town centres' also includes local centres, however all proposals will be considered in the context of the scale of the settlement where it is proposed and the role and

function of the centre. Large-scale developments are unlikely to be appropriate in smaller local centres and should be directed to town centres. Where relevant, the scope for disaggregating specific parts of a retail or leisure development onto separate, sequentially preferable, sites should be addressed by applicants.

3.5 Where a sequentially preferable site is suggested to be unviable (either for the application proposal in its entirety or for a disaggregated element of it), the applicant will be expected to provide evidence of this. For example, such submissions could follow a standardised viability appraisal format in line with the Royal Institute of Chartered Surveyors 'Red Book'.

3.6 A flexible and realistic approach will be taken to the application of this policy. Regard will be given to the scale of a proposed development and its intended catchment area when determining whether it is appropriate to apply the sequential approach, as well as to other planning objectives. The town centre first principle will not be used to resist new shops or appropriate facilities proposed within other areas such as suburban areas or smaller villages if they would be of an appropriate scale to provide for local needs.

3.7 The sequential approach will not normally be applied to proposals for Class 5, and 6 employment uses as these uses are not usually visited by members of the public and hence do not attract significant footfall. While many Class 4 proposals will be appropriate in scale and character for a town centre and will normally be expected to locate there, some Class 4 proposals may be better located on land specifically allocated by the Plan for such use. Proposals for Class 4, 5, and 6 uses within town, village and local centres will be assessed on their merits and will be supported where their impacts will be acceptable, taking account of other relevant Plan policies.

3.8 The impact of development proposals on the vibrancy, viability and vitality of town centres will be taken into account. Retail and commercial leisure developments over 1000m² gross floorspace outwith town/local centres will require a retail impact assessment to be carried out. New public buildings or offices with over 2500m² gross floorspace outwith town/local centres and on land not allocated for this purpose will require an analysis of their impact on relevant centres. Smaller proposals may also require impact assessment where the Council considers there may be a threat to existing centres. A more flexible approach will be applied to community, education and healthcare facilities, for example to ensure they are appropriately located for and easily accessible to the communities they will serve.

3.9 The Council has commissioned a retail capacity study, which will provide evidence of any quantitative and qualitative shortfalls in retail provision in different parts of East Lothian, and on the potential for claw-back of expenditure currently 'leaking' to locations outwith East Lothian. This evidence will be used by the Council where relevant in the assessment of retail proposals.

Policy TC1: 'Town centre first' principle

A sequential 'town centre first' approach will be applied where appropriate to retail, commercial leisure, office and other development proposals that would attract significant footfall. Applicants should provide evidence that locations have been considered in the following order of preference:

1. Town centre or local centre;
2. Edge of town centre or local centre
3. Other commercial centre;
4. Out-of-centre locations that are, or can be made, easily accessible by a choice of transport modes.

Out-of-centre locations will only be considered where an applicant can demonstrate that:

- all town or local centre, edge of centre and other commercial centre options have been assessed and discounted as unsuitable or unavailable;
- the scale of development proposed is appropriate, it cannot reasonably be altered or reduced in scale to allow it to be accommodated at a sequentially preferable location;
- the proposal will help to meet qualitative or quantitative deficiencies; and
- there will be no significant adverse effect on the vitality and viability of existing centres.

In all cases the scale of development proposed should be appropriate to the scale of settlement and the role and function of the centre where it is proposed. Large scale developments will not normally be appropriate in local centres.

In determining whether it is appropriate to apply the sequential approach to a particular proposal, the Council will have regard to the scale of development and its intended catchment area as well as to other planning objectives.

Some Class 4, 5 and 6 proposals may be better located on land allocated by the Plan for such use. Any proposals for such uses will be assessed on their merits and will be supported in town centres where their impacts will be acceptable, taking account of other relevant Plan policies.

A more flexible approach will be applied to community, education and healthcare facilities.

Changes of use in town and local centres

- 3.10 The Council seeks to ensure that expansions or changes of use within town centres and local centres will not compromise the centre's vibrancy, vitality and viability. In principle, changes of use from one town centre use to another will normally be acceptable. Changes of use from a ground floor town centre use to residential use will be permitted only where there is

evidence that the premises is no longer viable as a town centre use. In practice this will mean an applicant providing evidence of a formal marketing campaign for town centre uses at a reasonable price for a minimum of six months, including details of methods of marketing, relevant dates, copies of particulars, and details of all interest and offers received. 'Town centre uses' in the context of this policy will include uses within classes 1, 2, 3, 10, and 11, and any other uses with similar characteristics that generates significant footfall.

- 3.11 New buildings within town or local centres will be expected to reflect the prevailing vertical mix of land uses by providing town centre uses on the ground floor and residential or other town centre use above where this would be appropriate in their context.

Policy TC2: Town and local centres

Within a town or local centre, uses that will be acceptable in principle include retailing, business and office use, restaurants, leisure and entertainment, and the principle of a change of use from one of these uses to another will be supported.

Residential use may also be acceptable, particularly in a backland or above ground floor location. However, changes of use from a ground floor town or local centre use to residential use will only be permitted where there is evidence that the premises is no longer viable as a town or local centre use.

New buildings within a town or local centre will be expected to reflect the prevailing vertical mix of land uses in the area by providing town or local centre uses at the ground floor where appropriate in their context.

Proposals that would have a significant environmental impact, particularly on housing, will not be permitted.

Protection of Local Facilities

- 3.12 To maintain resilient and vibrant communities the Council will seek to protect shops and public houses in smaller villages. These perform an important role within communities and contribute significantly to their ongoing sustainability.

- 3.13 Changes of use of such facilities will only be permitted where there is evidence that the premises are no longer viable. In practice this will mean an applicant providing evidence of a formal marketing campaign at a reasonable price for a minimum of a year, including details of methods of marketing, relevant dates, copies of particulars, and details of all interest and offers received.

3.14 For the purposes of this policy, ‘smaller villages’ means settlements defined as such in this Plan that do not have a defined town or local centre, i.e. Garvald, Humbie, East Saltoun, Aberlady, Dirleton, Whitekirk, Elphinstone, Gladsmuir, Macmerry, West Barns, and Pencaitland.

Policy TC3: Protection of local facilities

Within smaller villages changes of use of the last shop or public house will only be permitted where there is evidence that the premises is no longer viable.

Town centre strategies and Health Checks

3.15 A town centre strategy has been already prepared for Musselburgh covering the period to 2019. The Council will prepare individual town centre strategies for Tranent, Prestonpans, Haddington, Dunbar, and North Berwick town centres. These will be progressed once the Plan is operative and will be taken forward as non-statutory supplementary planning guidance. Strategies will be reviewed and updated as appropriate based on regular health checks. The town centre strategies will provide a vision for each town centre to help address local environmental issues as well as their vibrancy, vitality, and viability. They will also be informed by the findings of a retail capacity study for East Lothian.

Hot food outlets

3.16 Hot food take-aways have the potential to raise particular issues for local residential amenity due to noise and smell, and road safety resulting from parking impacts. Cumulative impacts are an important consideration, particularly in town centres that already have a number of hot food take take-aways.

3.17 Hours of operation will normally be limited to times between 7.30am and midnight; in some circumstances more restrictive times will be appropriate

Policy TC4: Hot food outlets

Proposals for hot food take-aways will be supported in the locations identified below provided they will not result in significant impacts on local amenity, including cumulatively with other existing or consented take-aways in the area, and are consistent with other relevant Plan policies, including in relation to parking and road safety:

- Town or local centres; or
- Designated employment areas where the development is intended to meet demand from employees of business within the site and not to attract customers from outwith the site.

Siting of mobile snack bars may also be permitted on suitable car park or lay-by sites adjacent to main transport routes, subject to other Plan policies including consideration of visual and landscape impact.

Residential Character & Amenity

3.18 The LDP seeks to grow East Lothian’s economy and communities but also protect and, where possible, enhance their residential character and amenity. Uses such as shops, offices and certain businesses uses can be suitable in residential areas where the predominantly residential use and character and amenity of the area is maintained. However, development that could cause unacceptable levels of noise, smells, traffic movement or other adverse environmental impacts will not be permitted. For the avoidance of doubt, the inclusion of a site or building within an ENV1 policy area does not imply that a proposed new residential development will be acceptable. While the principle of residential use is likely to be compatible with the terms of this policy, any such proposals must first be assessed against other policies.

Policy RCA1: Residential Character and Amenity

The predominantly residential character and amenity of existing or proposed housing areas will be safeguarded from the adverse impacts of uses other than housing. Development incompatible with the residential character and amenity of an area will not be permitted. Proposals for new development will be assessed against appropriate local plan policies. In the case of infill, backland and garden ground development, this will include assessment against Policy DP7.

Planning for Employment

Background

- 3.19 A significant challenge for the Council is to increase job density in East Lothian and to ensure that opportunities for job creation and economic growth are generated alongside an increase in population and the delivery of new homes. The LDP has a key role in this. Scottish Planning Policy notes that LDPs should promote a range and choice of sites to meet the needs of different business sectors.
- 3.20 The approved Strategic Development Plan requires the LDP to retain at least 76 hectares of allocated employment land. It identifies four strategic employment locations in East Lothian which the LDP is to retain. These are the allocated sites at Craighall, Musselburgh and at Blindwells, Macmerry and at Spott Road Dunbar. The LDP is to justify any mixed use proposals for the development of these important strategic sites. The Council also supports the principle of home-working, live-work units, micro-businesses and community business hubs.

Employment Locations

- 3.21 The Council supports proposals for employment generating economic development on all existing business and employment sites. However, much existing allocated employment land in East Lothian is in the control of parties seeking to develop the land for alternative uses. In addition, the scale of demand and potential users associated with traditional Class 4, 5 and 6 uses may not be sufficient to deliver the investment needed to achieve the servicing and delivery of many employment sites.
- 3.22 In recognition of these issues, and following a review of the existing employment land supply in East Lothian, the Plan proposes a flexible policy approach whereby other employment generating uses could play an enabling role on employment sites to ensure that serviced employment land is released for employment growth and job creation. The plan therefore allocates land for Class 4, 5 and 6 uses, but other employment generating uses may also be supported on these sites. This would be subject to the town centre first principle and provided the proposal would generate no amenity conflicts and could co-exist satisfactorily with existing or proposed uses on the site and in the surrounding area.
- 3.23 The Council also recognises that within existing business and industrial locations there will be a periodic need for redevelopment of premises to help regenerate and improve these employment areas. In considering proposals for such development it is important to ensure not only that new employment opportunities arise but that the uses proposed do not prejudice or inhibit the activities of a nearby employment use.

Policy EMP1: Business and Employment Locations

Within areas allocated for business and employment, uses within Use Classes 4, 5 and 6 of the Town and Country Planning (Use Classes) (Scotland) Order 1997 are supported.

Other employment generating uses may also be supported in such these locations subject to the town centre first principle (policy TC1) and provided there would be no amenity conflicts or other unacceptable impacts. Proposals to redevelop employment sites or premises for other employment generating uses will only be supported where the uses proposed do not prejudice or inhibit the activities of a nearby employment use.

Waste management facilities will also be supported provided they are compatible with employment use (See Policy W2).

Proposals must not adversely affect amenity and must be able to co-exist satisfactorily with existing or proposed uses on the site and in the surrounding area.

Local Development Employment Land Proposals

- 3.24 Table EMP1: Employment Proposals by Cluster Area lists the sites within East Lothian that are allocated for Class 4, 5 and 6 employment uses or for a mix of employment generating uses in accordance with Policy EMP1 above. Most new land for employment purposes is allocated in the west of East Lothian in line with the spatial strategy but sites in the eastern area are also allocated to allow for employment growth throughout East Lothian.

Table EMP1: Employment Sites and Proposals by Cluster Area

MUSSELBURGH	PROPOSAL REF	SITE NAME	OPERATIONAL LAND (HA)	UNDEVELOPED SITES (HA)	NEW ALLOCATIONS (HA)	DEVELOPMENT BRIEF	COMMENTS	POLICY / PROPOSAL APPLYING TO SITE
		Newhailes Industrial Estate	6.3				Existing employment location; part of established employment land supply	EMP1

		<p><i>Note: There are areas within the countryside where employment uses operate or where planning permission has been approved for employment uses on the basis that such development is acceptable in the context of policies that manage development within the countryside. These areas include Fenton Barns, Halflandbarns, Gilmerton and others. These areas will continue to be subject to Development in the Countryside policies to ensure that the nature and scale of employment use that can take place would be appropriate.</i></p>						

Tourism

Background

3.25 The East Lothian Economic Development Strategy 2012-22 identifies tourism as one of the strengths of the East Lothian economy and a source of employment opportunities in the future. The local development plan's policies and proposals seek to ensure that a balance is found between encouragement of tourism, including activity based tourism (e.g. walking and cycling) and the economic benefits that it provides and the protection of for example, important landscape and nature conservation interests. All leisure and tourism related development proposals, including visitor attractions, hotels and holiday accommodation, will be assessed against all relevant Local Development Plan policies.

Tourism Policies

3.26 At Dirleton the Archerfield estate has been developed for golf based leisure and tourism development with housing justified as enabling development. Any new development proposed in the estate must be either golf based hotel, leisure and recreation development or a form of development consistent with the policies for the control of development in the countryside or on the coast. At Archerfield the extensive area of sand dunes in the north west section of the estate is designated as part of the Firth of Forth SSSI and it is important that the natural and cultural heritage of the area is protected. Proposals that affect a designated area of natural heritage will be assessed against natural heritage policies of the plan. Archerfield Estate is also included on the national Inventory of Gardens and Designed Landscapes and proposals will be assessed against Policy CH6. Housing development at Archerfield was provided to enable the other tourism related developments as an exception to the normal presumption against housing development in the countryside. It follows therefore that additional housing development within these new housing areas should not be permitted to avoid intensifying the effect of development in the rural area.

Policy TOUR1: Archerfield Estate, Dirleton

The Council continues to support the principle of high quality golf based hotel, leisure and recreation development at Archerfield Estate, near Dirleton. There will be no infill housing development in Archerfield Estate either as new build or the conversion of existing buildings. Development that is within the designed landscape will be assessed against Policy CH6.

3.27 At Belhaven, the continued use of the chalets as holiday accommodation is supported but they are not considered suitable for permanent residential accommodation; any proposals for permanent residential accommodation will not therefore be permitted.

Policy TOUR2: Belhaven Chalets

The Council supports the continued use of the Belhaven chalets as holiday accommodation. Planning permission will not be granted for alterations or other development that would permit the chalets to be converted to permanent residential occupation.

3.28 At Dunbar the former Dunbar Castle Vaults, located underground to the south of Victoria Harbour quayside, is considered as a potential tourist attraction as part of a commercial or tourism related facility, for example, a restaurant, hostel or gallery.

Policy TOUR3: Dunbar Castle Vaults

The Council will support the principle of proposals for a commercial or tourist related development on the south side of Victoria Quay if it enables the underground vaults to be opened up to public view.

3.29 A range of hotel, guest house and other accommodation attracts visitors and encourages them to stay longer and therefore benefit the economy of East Lothian. There is a particular need to encourage high quality hotel accommodation. Proposals that will result in the loss of hotel or guest house accommodation will be resisted unless it can be clearly demonstrated that the continued use of the building as a hotel or guest house is not practical. In practice this will mean an applicant providing evidence of a formal marketing campaign at a reasonable price for a minimum of a year, including details of methods of marketing, relevant dates, copies of particulars, and details of all interest and offers received.

Policy TOUR4: Hotels and Guest Houses

Proposals for the change of use of hotels and guest houses will be resisted unless it can be clearly demonstrated that all reasonable efforts have been made to retain the property in use as a hotel or guest house, including evidence that it has been marketed as such and no reasonable offers received.

3.30 At Whitekirk, the Whitekirk Golf and Country Club Historic Scotland received planning permission for a 100 bedroom hotel, additional 18 hole golf course, holiday lodges, houses, golf club house and associated works. Once completed, the houses, provided as enabling development as an exception to the normal presumption against housing in the countryside will not be permitted to intensify by new development.

PROP TOUR5: Whitekirk Golf Club

Land at Whitekirk is allocated for a golf based hotel, leisure and recreation development.

Planning for Housing

The Housing & Housing Land Requirement

- 3.31 The SDP with its Supplementary Guidance on Housing Land requires the LDP to ensure sufficient housing land is available that can deliver 6,250 homes in the period 2009 to 2019 and a further 3,800 homes in the period 2019 to 2024⁶. In total, sufficient housing land is needed so 10,050 homes can be developed in the period 2009 - 2024. Provision also needs to be made for specialist housing and for other specific housing needs.
- 3.32 The LDP continues to support the housing land allocations committed by previous plans⁷. Their development is complemented by and not undermined by this LDPs new allocations. The amount of established housing land that can be developed through time to satisfy the SDPs requirements has been assessed. The resultant housing land shortfall has informed the amount of additional housing land and new site allocations made by this LDP, as has the start date and rate of development that can be anticipated for these new housing land allocations. The overall capacity of all sites in the housing land supply is in excess of the 10,050 home Housing Land Requirement set by the SDP. This is to provide a generous supply of housing land so the SDPs requirements can be met, in line with Scottish Planning Policy. It also reflects that the allocations selected would allow development to take place in the most appropriate locations, even if their capacity means development could continue into the longer term. As such, some sites may not be fully developed within the plan period and may continue to be developed beyond 2024. However, all sites could be developed more quickly if market demand, infrastructure, resources and the capacity in the construction sector permit.
- 3.33 The LDP provides a generous supply of housing land that is or can become effective during the plan period. However, achieving the SDPs requirements will also be dependent on the rate and volume of housing that can be delivered on sites. The LDP strategy focuses on where and how this can take place, and what actions will be needed by whom to make development happen. Yet the rate of housing delivery that will take place will be dependent on many factors not related to the SDP requirements, or the LDP or its Action Programme. These include the strength of the housing market, the ability to fund infrastructure and the ability and will to make development happen and to complete and sell homes at the rate needed to meet SDP requirements.

Spatial Strategy

- 3.34 The LDP strategy directs the majority of new housing land to the main settlements in the west of East Lothian. This is most likely where housing development could happen in the

short to medium term in the significant volumes expected. However, it also reflects that there is need and demand for new homes further east, and that mobile demand dissipates as distance from the regional core increases. The SDA is prioritised as the location for new housing, but a range and choice of smaller site allocations are made outwith the SDA in other marketable locations where need could also be met. This range and choice of site types, sizes and locations will also help to ensure that an adequate five-year effective housing land supply can be maintained, consistent with SDP Policy 7. All housing land will contribute to meeting SDP requirements.

Blindwells' Role in Meeting Housing Land Requirements

- 3.35 The vision for Blindwells new settlement is the creation of a large scale mixed community that contributes to Housing Land Requirements up to 2032 and beyond. The SDP requires the LDP to seek a comprehensive solution that may allow Blindwells to expand, which have not been found during the preparation of this LDP. However, if such a solution is found as this LDP is operative, the overall scale and development principles for the new settlement could be confirmed by the Council through the adoption of Supplementary Guidance. The SDP expects that Blindwells need only contribute housing land to its spatial strategy after 2019. If solutions for delivery of a larger new settlement are found before then the SDP would not prevent more housing being developed there in the short or medium term.

Consideration of Housing Development Beyond 2024

- 3.36 The SESplan HNDA signposts that there may be need and demand for a further 3,820 dwellings in East Lothian for the period 2024 – 2032. The SDP does not require the LDP to allocate housing land for that period, but the LDP does identify and safeguard potential opportunities. These include allocated sites that are not expected to be fully developed by 2024. Blindwells is intended to have such a role, which may be enhanced if a suitable comprehensive solution for development of a larger settlement is found. Sites have also been safeguarded by the LDP for potential future housing development post 2024.

Housing Proposals and Safeguards

- 3.37 Table HOU1: Housing Proposals by Cluster Area identifies additional sites this LDP allocates to meet the SDPs Housing Land Requirements and the sites the LDP safeguards so the opportunity to consider them as potential future development locations is not prejudiced. Based on the rate of development anticipated for all sources of housing land at the point of LDP adoption, Table HOU2: Housing Land Requirement and Supply shows that the timeous development of homes on this land could meet the SDPs requirements, and that some sites may continue to deliver homes in to the longer term.

⁽¹⁾ Based on Draft 2015 Housing Land Audit including contribution of 92 dwellings from small sites (less than 5 units) programmed 2015–19 as per draft audit; ⁽²⁾ SESplan's windfall assumption for East Lothian has been used at this stage; ⁽³⁾ Based on demolitions information from ELC Building Standards; ⁽⁴⁾ A negative number indicates a surplus of housing land against the housing requirements; ⁽⁵⁾ For the avoidance of doubt, the figure for the period 2024 – 32 is not part of the SDPs housing requirement, but is an estimate of need and demand for housing during that period from the SESplan HoNDA.

Maintaining an adequate Effective Five-Year Housing Land Supply

- 3.38 This plan makes available a generous supply of housing land that is effective or is able to become effective during the plan period. A full range and choice of site types and sizes are allocated in a range of marketable locations so homes can be developed on appropriate sites at the rate and in the significant volumes expected to meet the SDP's requirements. However, delivering new homes at the rates and in the volumes expected by the SDP will be extremely challenging, including for housing providers. In this context, even though a generous housing land supply has been made available by this plan at the point of adoption, an inability to develop homes on the land supply as this plan is operative at the rate expected to meet SDP requirements could lead to calls to release additional sites for alternative housing proposals on land not allocated for that purpose by this plan, and a very serious and unjustified threat to the delivery of the plan's strategy and sites.
- 3.39 The timing and rate of housing development that will occur during the plan period will be dependent on many factors, including market demand and the will and ability of landowners and developers to make development happen. It will also be influenced by the extent to which necessary actions required to implement the strategy and sites have been carried out, including the ability to fund and provide the additional infrastructure capacity that is required to enable development. Collaborative working, the prompt submission of sound proposals and masterplans and their efficient handling and determination will also be important. However, if unconstrained sites that are effective or capable of being made effective do not start or are developed slower than envisaged than at the point of LDP adoption, it does not follow that the reason for slower rates of delivery is a shortage of developable land. Delays in the submission of proposals and site starts and lower than expected rates of delivery may indicate that in reality fewer homes can be completed during the plan period than the amount needed to match the HNDA estimates of need and demand that were transposed into the SDP to set its Housing Land Requirements.
- 3.40 Delivery of the SDPs requirements assumes that annual completion rates of more than double (in some years more than triple) the highest level ever achieved in East Lothian in the past can be delivered, and that this rate of housing development can be sustained throughout the plan period. This unprecedented rate and volume of housing delivery is being planned for during a period of significant infrastructure and funding constraint. It is a time when clarity and certainty will be essential so significant decisions can be taken with confidence on how, where and when to direct scarce resources so the wider outcomes of this plan's strategy can be delivered. The same clarity and certainty will be essential if the investment decisions that will deliver allocated sites are to be encouraged. Maintaining the focus on, and ensuring that attention and resources are not distracted from, delivering the plan's strategy and sites and ensuring that they are not undermined by windfall proposals will be a very significant issue for those who have a role in delivering them.

- 3.41 However, if a five year effective housing land supply is not being maintained in East Lothian, Scottish Government planning policy would expect this plan's policies on the supply of housing land to be considered out-of-date. This means that as this plan is operative there may be situations when the Council needs to consider whether the principle of housing development on land not allocated for that purpose should be supported. The starting point for considering if any such action is needed (based on SPP taken together with PAN 2/2010) will be if a shortfall of dwelling completions is programmed from the effective housing land supply in the next five years. Current Scottish Government planning advice is that a site, or a relevant part of it, can only be considered effective if it is programmed to be developed in the following five years. This will be monitored by the Council, based on annual updates of its housing land audit. The calculation the Council will then use to assess whether the amount of effective land is sufficient is set out in Advice Box 1 below, unless and until an alternative approach should be followed consequent on any review of SPP or associated advice.

Advice Box 1: Calculating the adequacy of the Five-Year Effective Housing Land Supply

Method to assess the numerical adequacy of the 5-year effective housing land supply:

1. If more than five years of the first plan period remain, a pro-rata figure of the remaining Housing Land Requirement for that period shall be calculated by subtracting the completions achieved since the base date of the SDP from the Housing Land Requirement for the first plan period, then dividing the net figure by the number of years remaining in the first plan period, and multiplying the annualised figure by 5; or
2. If less than five years of the first plan period remain, a pro-rata figure of the annualised Housing Land Requirement for the second plan period shall be added to any shortfall figure from the first (calculated by subtracting completions achieved since the base date of the SDP from the Housing Land Requirement in the first plan period); or
3. If less than five years of the second plan period remain, a pro-rata figure of the annualised housing need and demand estimate for the signpost period shall be added to any shortfall figure (calculated by subtracting completions achieved since the base date of the SDP from the Housing Land Requirement for the plan period);
4. The recalculated Housing Land Requirement figure derived, as appropriate, from step 1), 2) or 3) above shall be compared to the amount of homes programmed to be developed in the next five years, based on the latest housing land audit (or any housing monitoring paper) to assess if there is a surplus or shortfall of homes programmed to be developed in the next five years;
5. To establish how many years of effective housing land supply these programming assumptions would yield, step 4) will be divided by step 1), 2) or 3) as appropriate and multiplied by 5.

- 3.42 The calculation set out in Advice Box 1 reflects current Scottish Government planning advice on how to assess whether the amount of effective land is sufficient – i.e. if the number of homes that are programmed to be developed on sites in the next five years will be sufficient to meet the recalculated housing land requirement. However, assumptions on the programming of completions are a snap shot in time, and are widely recognised as challenging to predict accurately and can vary considerably from year to year. The start date and rate of development anticipated from any site can be influenced significantly by many factors outwith the control of the planning authority, including the aspirations of landowners, the demand for housing, the decisions of others on where and when to invest and make development happen, and the availability of mortgages, resources in general and capacity in the construction sector. The extent to which the rate and volume of house completions can be increased during the plan period will likely be related more to these factors than any need to meet the SDPs requirements. Nonetheless, SPP and its associated advice expect a five year effective housing land supply to be maintained at all times.
- 3.43 Current Scottish Government advice on how to measure the amount of effective housing land does not identify how many homes could be delivered on the land supply: it measures the will and ability of housing providers to make development happen at a given rate and volume at a point in time. One reason for this is the current definition of ‘marketability’ as a measure of effectiveness. This definition influences how quickly a site, or part of a site, can be programmed to be developed and thus how much of it can be considered effective. However, issues of ‘marketability’ can be affected by the availability of mortgages or low levels of demand, which can delay site starts or reduce the rate of development. Scottish Government planning advice on how programming assumptions based on marketing factors should be taken in to account may not be a reliable indicator of the total amount of effective land that could be available if there were an ability or will to develop it faster. Programming assumptions can conceal that sites or the full capacity of some sites that are effective or can become effective could be developed quicker were it not for wider factors preventing the SDP’s requirements being met. In such circumstances, there may be little if anything to be gained by automatically accepting that there is a need to support the principle of housing development on land not allocated for that purpose.
- 3.44 It is an aim of the LDP to secure housing development in the right place, not to allow development at any cost. In the event of a programmed shortfall of dwelling completions from the effective housing land supply, the cost of continually following a short term unplanned approach to delivering housing would be to dilute capacity and resources and to distract them and the focus from securing the outcomes associated with delivering the LDP strategy and sites. It could generate risk and uncertainty around associated funding and investment decisions, and undermine the ability and willingness to deliver LDP sites and further delay their development, and thus compound the plan’s delivery issues. Such an approach would also undermine the consultation undertaken in the preparation of the LDP strategy and sites and plan-led system. These are significant material considerations.

- 3.45 However, there is a significant need and demand for new homes in the area. In the event of a programmed shortfall of dwelling completions from the effective housing land supply this will also be given due consideration by the Council as it decides if the principle of housing development on land not allocated for that purpose should be supported. This will be given significant weight particularly if the amount of constrained housing land in the area would prevent SDP requirements being met, as this would suggest a genuine need to take action to increase the supply of unconstrained housing land in the area. This will be monitored by the Council through its housing land audit and Action Programme.
- 3.46 In line with the Scottish Government’s current national planning policy and advice, if a five year effective housing land supply is not being maintained in East Lothian, a presumption in favour of development that contributes to sustainable development is to be a significant material consideration in the determination of proposals for housing development on land not allocated for that purpose. Any such proposals will be assessed against all relevant policies of the development plan, including SDP Policy 7, Policy HOU1 below and any other relevant material considerations.

Policy HOU1: Maintaining an Adequate 5-Year Effective Housing Land Supply

If an adequate five year effective housing land supply is not being maintained in East Lothian, the Council may accept the principle of housing development on land not allocated for that purpose by this plan. Any such proposals must comply with SDP Policy 7, the criteria below, and all other relevant plan policies, including those on design:

1. Location - the site is an appropriate extension to an existing settlement defined by the LDP;
2. Effectiveness - it must be proven that the site would be immediately effective and capable of being substantially completed within five years;
3. Scale – the scale of the proposal must not predetermine or prejudice the Council’s subsequent flexibility to consider and determine where any housing land allocation should occur through a future review of this plan, and it must also be appropriate to the scale and character of the specific settlement and local area, and should be no more than 200 homes – the subdivision of a larger sites into smaller applications in order to meet this maximum will not be supported;
4. Timing – evidence will be expected of housebuilder interest in the site to demonstrate that it can reasonably be followed through and early dwelling completions can be anticipated;
5. Development plan strategy – the proposal must not prejudice the delivery of the development plan strategy by using infrastructure capacity needed for existing housing commitments or allocations, or compromise the ability to provide infrastructure capacity for them, and it must not be dependent on the prior provision of infrastructure to be provided by existing allocations where these have not yet started and delivered the necessary infrastructure;
6. Any additional infrastructure capacity required as a result of the development is either committed or will be funded by the developer and can be delivered.

Affordable Housing

- 3.47 Affordable housing is broadly defined as housing of reasonable quality that is affordable to people on modest incomes⁸. The need for affordable housing should be met as close as possible to where it arises. The LDP seeks to address this in its spatial strategy, policies and proposals, taking into account local characteristics and the need for affordable housing⁹. This is done in line with SPP and the findings of the SESplan Housing Need and Demand Assessment (HNDA). The LDP and Local Housing Strategy are also aligned. The LDP sets out the planning policy approach for increasing the supply of affordable housing in the area.
- 3.48 Development Plans are expected to address the need for affordable housing in their policies and proposals, if supported by a Housing Need and Demand Assessment (HNDA). The SESplan HNDA provides the analysis of housing need and demand in East Lothian and it has been signed off by the Scottish Government as robust and credible. It identifies that there is an ongoing need for affordable housing in the area and that this need continues to grow. The SESplan HNDA provides evidence to show that between 2009 and 2032, 33% of the total housing supply should be provided as affordable housing. In the short term up to 2019, the SESplan HNDA demonstrates that the affordable housing need will be more acute with a 41% annual requirement¹⁰. SPP suggests that the level of contribution for affordable housing expected from a market site should generally be no more than 25% of the total number of units. Higher affordable housing requirements may be justified in relation to particular sites, including where land is publically owned.
- 3.49 The affordable housing quota of the previous local plan was 25%, other than at Blindwells (site ref: BW1) and at Letham Mains, Haddington (site ref: HN1) where 30% and 17% quotas were set respectively. To allow for the transition between plans, the affordable housing quotas for those sites will remain as set by the previous local plan. Other than these exceptions, the quota for the provision serviced affordable housing land that will be required from any housing proposal submitted under this plan will be 25% of the total number of dwellings. Delivery mechanisms for provision of the affordable housing must be agreed with the Council. The trigger at which the transfer of serviced land for affordable housing provision will be sought shall be proposals consisting of 5 or more dwellings.
- 3.50 Developers will be expected to work in partnership with the Council, and where relevant RSLs, to ensure housing needs are met including in terms of tenure and house type and size. There will be a need to work collaboratively on master planning. The Council will be

flexible with developers who wish to build affordable homes themselves to be transferred to the Council if costs and values are acceptable. The affordable housing requirement must be provided in full on-site, unless the Council is satisfied that exceptional circumstances justify off site provision. Commuted sums will rarely be acceptable, but may be considered if neither on-site or off-site provision is appropriate, such as in farm steading conversions. The value of a commuted sum payment will be the value equivalent to the cost of providing the percentage of serviced land required by the policy. Developers must seek early discussions with the Council on matters related to delivery, including the number, type, tenure, density and design of affordable housing and the delivery method.

- 3.51 The Council has approved Supplementary Guidance to assist with the implementation of this policy and to allow developers and landowners to assess the implications of providing for affordable housing at an early stage. The Supplementary Guidance will commit to a review of the commuted sum value at least every 2 years, although the guidance itself will not be reviewed this frequently.

Policy HOU2: Affordable Housing Quota

Development proposals (including conversions) that in their totality will bring forward five or more dwellings must make provision for affordable housing as part of the proposal. The required proportion of affordable housing to be provided will be 25% of the total number of dwellings proposed for the site.

In all circumstances the approach to delivering affordable housing must be agreed with the Council, including the affordable housing provider where on site provision is required. This will also include the mix of affordable house types, sizes and tenures, and the areas of land or buildings to be used to accommodate the affordable housing. Agreement must be reached between the applicant and the Council that the affordable housing is proposed to be provided in an appropriate layout and form of development which will allow needs to be met. These matters should be agreed during pre-application discussions so they can be included in development appraisals before land is acquired, alongside any need to provide for any other planning obligations.

Planning permission will not be approved unless an agreed mechanism is in place to secure the delivery of affordable housing. Section 75 Legal Agreements will be used including for the transfer or delivery of serviced affordable housing land, or to ensure tenures of affordable housing will be delivered as agreed, or in exceptional circumstances if the Council agrees to the transfer of an agreed commuted sum.

Advice on all cost and valuation matters will be sought from the District Valuer, or if required in another way consistent with paragraph 22 of PAN 2/2010 or any revision.

⁹ SESplan SDP paragraph 117

¹⁰ SES Plan Housing Technical Note November 2011 (Table 4 - Demand for New Houses Net of Turnover, page 9)

<http://www.sesplan.gov.uk/assets/files/docs/proposed-plan/technical/Housing%20Technical%20Note%20Final.pdf>

Affordable Housing Tenure Mix

- 3.52 A wide range of housing tenures can be affordable. These include homes for social and mid-market rent including National Housing Trust and unsubsidised, subsidised shared ownership models and Scottish Government shared equity models, and discounted sale unsubsidised low cost home ownership. There are a variety of delivery mechanisms for such housing provision.
- 3.53 A wide tenure mix and delivery partners can help ensure housing, including affordable housing, is delivered. The LDP's policies and proposals take this and the need for affordable housing into account. The appropriateness of the site, development viability and the strength of the housing market may impact on the delivery of affordable housing on small sites, and off-site provision and commuted sums may be considered in these circumstances. However, because there is support for a wide tenure mix this means a lack of public funding will not normally prevent affordable housing quotas being met.
- 3.54 The Council has approved more detailed supplementary planning guidance that will allow developers and landowners to assess at an early stage the options and implications of providing for the expected affordable housing tenures.

Policy HOU3: Affordable Housing Tenure Mix

A wide range of affordable housing tenure models are supported, including social rent, shared ownership and shared equity models, homes for mid-market and intermediate rent, and subsidised and unsubsidised low cost housing for market sale and self build plots.

The Council has specified in supplementary planning guidance the affordable housing tenures that will be supported, including the requirement for social rent as well as targets for the proportional split between other acceptable tenures and how the tenure models should be delivered. The availability of any funds to support delivery will be set out in the Council's Local Housing Strategy and Strategic Housing Investment Plan. The location and size of the site, the form of development to be delivered and the availability of subsidy will help inform the mix of tenures to be provided. The tenure mix and delivery mechanisms must be agreed with the Council before approval of any planning permission.

Advice on all cost and valuation matters will be sought from the District Valuer, or if required in another way consistent with paragraph 22 of PAN 2/2010 or any revision.

Specialist Housing Provision & Other Specific Needs

- 3.55 The LDP supports the principle of specialist housing provision and provision for other specific housing needs. For Local Housing Strategy purposes, the HNDA will be supplemented by further study on the need and demand for specialist housing including accessible and adapted housing, wheelchair housing and supported accommodation, such as sheltered and extra care housing. This is to help inform the needs to be met through the affordable housing policy of this plan as well as other forms of delivery in the area. East Lothian housing providers are also committed to the Scottish Government aims to help older and disable people to live safely, independently and comfortably in their own homes. The Council supports the principle of adaptations to dwellings to facilitate more independent living.

Residential Care & Nursing Homes

- 3.56 There have been a number of closures of nursing and residential homes in East Lothian, resulting in a significant reduction in the number of places available. Several financial and regulatory factors have contributed to closures that have included establishments in Musselburgh, Haddington, Dunbar, Gullane and Aberlady. Property prices in the Edinburgh area has meant that other uses for these buildings can generate higher values. At the same time the number of very elderly people in East Lothian is rising and this is projected to grow over the plan period. The fall in provision of such accommodation coupled with the rise in demand means that unless there is a positive policy context for provision of accommodation for older people, they may have to wait longer for placements.
- 3.57 East Lothian's Health and Social Care Partnership is examining ways in which the supply of care places can be increased. Until new provision is available however, the Council must ensure, as far as it is able, that no more homes close. The Council will take this into account in the interests of the community when it assesses the potential loss of a residential care home. Consideration will be given to the availability of existing and committed residential care home places, the operational viability of the care home and to the proposed alternative use (for example sheltered housing might be acceptable).
- 3.58 Change of use will not be supported unless continued use as a care home is not operationally viable, and it is impossible to make it so either by investment or sale to another operator. However, the Council does not seek to prevent alternative uses where care home use is no longer viable, including where the cost of meeting new registration standards is prohibitive. Any application for change of use of a care home will therefore be required to submit evidence of lack of viability of the current use. In practice this will mean an applicant providing evidence of a formal marketing campaign for the current use at a reasonable price for a minimum of six months, including details of methods of marketing, relevant dates, copies of particulars, and details of all interest and offers received.

Policy HOU4: Residential Care & Nursing Homes – Change of Use

Proposals for the change of use of a residential care or nursing home will only be permitted where, on the advice of the Director of East Lothian’s Health and Social Care Partnership:

1. the loss of places will not harm the residential care interests of the people of East Lothian; or
2. the Council is satisfied that for operational reasons there is no prospect of the care or nursing home continuing as a viable concern. Clear evidence to this effect must accompany any application for a change of use, including full details of its marketing as a care or nursing home and all offers received.

3.59 Ensuring the suitable location of residential care and nursing homes is also a specific land use planning issue. The Council is responsible for the registration and inspection of residential care homes for the elderly, and NHS Lothian is similarly responsible for nursing homes. Both organisations use similar criteria in respect of location, recognising the importance that the home is located within the community that it serves, that it should not be isolated, and that it be served by public transport. In the context of any assessment by the Council of need and demand, planning applications for such uses will be assessed against the following policy.

Policy HOU5: Residential Care and Nursing Homes – Location

Developers of residential care and nursing homes are encouraged to use sites within settlements. Proposals must have reasonable access to the normal range of community services and be acceptable in terms of impact on amenity and the environment. The Director of East Lothian’s Health and Social Care Partnership will be consulted on proposals for residential care homes and NHS Lothian for nursing homes.

Housing in Multiple Occupation

3.60 The Housing (Scotland) Act 2000 requires that housing in multiple occupation (HMO) must be licensed for such use. An HMO is defined as the only or principal residence of three or more qualifying persons from three or more families, and occupied by them as their only main residence (or in some other manner specified by Scottish Ministers by order) and is either a house, premises or a group of houses owned by the same person with shared basic amenities (or some other type of accommodation specified by Scottish Ministers by order). The matter of whether planning permission would be required depends on the existing use of the property, the number of occupants and if they are a family or not.

3.61 Under planning use classes regulations, a house can include up to 5 unrelated people living together. Consequently, the use of a house as one licensed as an HMO with up to five occupants does not require planning permission. Only where the HMO involves more than 5 occupants who are not a family will planning permission be required for a change of use. Proposals for flats to be used for multiple occupation (for which there is no prescribed threshold) must be assessed on an individual basis. However, in practice the Council will treat these in the same way it does houses. The principal planning concern in terms of proposals for HMO is the need to protect residential amenity.

Policy HOU6: Housing in Multiple Occupation

Where planning permission for a change of use to a House in Multiple Occupation is required, this will be supported provided that:

1. nearby dwellings experience no significant loss of amenity, and
2. there is no harm to wider residential amenity as a result of increased pressure for the provision of services, including car parking or refuse areas.

Gypsy/Travellers’ sites

3.62 The LDP and LHS are to address any need for sites for Gypsy/Travellers and Travelling Showpeople. In comparison to the wider housing needs of the settled community, the scale of the accommodation required by the Gypsy/Traveller community may be small, but it cannot be overlooked.

3.63 There are three types of Gypsy/Traveller site: permanent sites, transit sites, and stopping places. Permanent sites provide residents with permanent accommodation and can be run by local authorities or registered social landlords, or privately owned by their residents. Gypsy/Travellers typically stay on-site for the majority of the year, only travelling for a few weeks. Transit sites are permanent developments that are only used temporarily by their residents, usually when they are travelling between more long-term locations. They provide more basic amenities than permanent sites. Stopping places are pieces of land where Gypsy/Travellers have traditionally stayed for short periods of time.

3.64 In terms of permanent sites, there is currently one local authority-run site jointly managed by East Lothian and Midlothian Councils, located on the boundary between the two local authorities near Whitecraig, and a small number of small, privately-owned sites. The need for any additional local authority provision for permanent Gypsy/traveller sites, transit sites and stopping places will be considered by the LHS review process. An assessment of the current level of site and pitch provision will be made and will address issues such as

the long term viability of the existing permanent site. In addition, an assessment will be made of whether sites and pitches currently provided are of the right type.

Proposals which do not meet all these criteria will not be supported by the Council.
Proposals on land specifically allocated for another purpose will not be permitted.

- 3.65 The Council is supportive of the principle of further small, privately-owned Gypsy/Traveller sites. Such sites tend to have 1-5 pitches and can accommodate one or two families, though can be larger. Applications for such sites will be assessed against the criteria in the policy below. There is no requirement to establish a need when considering such proposals. Each pitch can have one principal caravan with potential for siting up to two further caravans for additional accommodation and visitor accommodation if necessary. Pitches can be served by a utility unit with kitchen facilities and separate shower facilities. Limited ancillary class 4 (business) and class 6 (storage and distribution) use will also be acceptable in principle.
- 3.66 This policy applies equally within areas designated as countryside, Countryside Around Towns, or Green Belt. Temporary permissions should not normally be necessary, however occupancy restrictions may be appropriate. For the avoidance of doubt, permanent dwellinghouses will not be permitted within Gypsy/Traveller sites.
- 3.67 The need for any additional local authority provision for permanent Gypsy/Traveller sites, transit sites and stopping places will be considered through the LHS review processes. Any such proposals would also be assessed against the criteria in the policy as relevant. The policy will also apply in the case of proposals for permanent sites for Travelling Showpeople, and account will be taken of the need for storage and maintenance of equipment.

Policy HOU7: Gypsy / Travellers' Sites

The Council will assess applications for small, privately-owned Gypsy/Travellers' sites on their merits and will support the development of such sites where all of the following criteria can be met:

1. the site is in a location readily accessible to the main strategic road network;
2. the site is within reasonable proximity of community facilities and schools;
3. the site will not adversely affect or impact on any areas of recognised nature conservation, landscape, or built heritage interest, or any existing surrounding uses;
4. the site can be safely and acceptably accessed and serviced;
5. the site will be adequately landscaped to the satisfaction of the Council;
6. the site benefits from adequate levels of amenity; and
7. the development will not result in any loss of amenity to neighbouring uses including nearby residential properties.

Education, Community & Health and Social Care Facilities

Background

- 3.68 The Council must ensure provision is and can be made for the education of children in its area and must consult on certain changes in such arrangements before it can commit to delivering them, including if required to make sites effective. The Local Government (Scotland) Act 1994 requires the Council to provide adequate community services. NHS Lothian provides primary, community-based and hospital services for the area. East Lothian Council and NHS Lothian have also formed an Integration Joint Board to co-ordinate services delivered by GPs, hospitals, health workers, social care staff and others.
- 3.69 Anticipated demographic changes and new housing development in the area will generate demand for education, community and health and social care services and for provision of more capacity. In order to accommodate these demands the expansion of facilities and the provision of new ones will be required so high quality service delivery can be maintained. The spatial strategy distributes development to locations where such capacity exists or can be provided. As part of the strategy, consideration has been given to where best use can be made of existing facilities and where and how new facilities can be provided to support a sustainable pattern of development and local service provision in the area.
- 3.70 The following section identifies where education, community and health and social care facilities exist and will be provided to support the LDP strategy and sites. The LDP policies safeguard existing facilities where relevant and its proposals identify where new facilities will be located. The availability or ability to provide further capacity for windfall proposals over and above LDP sites will be assessed on a cumulative case by case basis. Developer contributions will be sought in all relevant circumstances and commitment to fund and deliver solutions to increase capacity where necessary will be essential prior to approval of any planning permission.

Safeguarding Existing Education and Community Facilities

Policy SECF1: Safeguarded Education and Community Facilities

The education and community facilities safeguarded by this policy are identified on the Proposals Map. Shared use of these facilities by relevant service providers will be encouraged, where possible and appropriate. Proposals for the alternative use of such facilities will not be supported unless it is demonstrated to the Council's satisfaction that they are surplus to requirements and there is no reasonable prospect of an alternative education, community or health and social care use of the facility.

New Education Provision

Musselburgh Cluster

- 3.71 This cluster currently comprises Musselburgh Grammar School and seven associated primary schools. The primary schools in Musselburgh are Stoneyhill Primary School, Campie Primary School, Musselburgh Burgh Primary School, Pinkie St Peter's Primary School and Loretto R.C. Primary School. The settlements of Wallyford and Whitecraig are served by their own primary schools and pupils from Old Craighall Village currently attend Campie Primary School. Musselburgh Grammar is located at the centre of Musselburgh.
- 3.72 Whilst the cluster is highly accessible, some settlements around Musselburgh are separated from the town as well as each other by busy road and rail lines. Consequently, the Council provides school transport for primary and secondary pupils from Wallyford, Whitecraig and Old Craighall. Some settlements in the cluster have regeneration potential and education facilities could play a significant role in helping to realise opportunities and deliver on related outcomes. The scale and location of the proposed development sites in this cluster will help support provision of new education facilities with viable pupil rolls in appropriate locations and allow for the formation of logical new school catchment areas.
- 3.73 Significant additional education capacity at primary and secondary level is needed to support the housing proposed in the cluster. A replacement primary school is committed at Wallyford but it has not been delivered and is required to support any further housing in its catchment area. Another two primary schools will be required in association with sites at Craighall and Goshen. The expansion of existing primary schools will also be required. In future there will be nine primary schools in the cluster, one of which will be a denominational primary school. Together they will support the transformational solution needed to provide additional secondary education capacity for the cluster area.
- 3.74 To provide the significant secondary school capacity that will be necessary, a second secondary school establishment will be provided at the Goshen site.

PROP ED1: Musselburgh Cluster Education Proposals

Part A

The Council will provide new secondary school establishment on land at Goshen to meet the need arising from proposed new housing development in the cluster. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, including for the provision of the campus land, which will be the

subject of legal agreements with relevant landowners.

Part B

The Council will provide new permanent pre-school and primary school facilities and campus land at:

- i. Craighall;
- ii. Goshen; and
- iii. Wallyford;

Developer contributions will be sought from the developers of relevant sites to fund the costs of this permanent provision, including for the provision of campus land, which will be the subject of legal agreement with relevant landowners.

Part C

The Council will provide additional pre-school and primary school campus land at Whitecraig Primary School as part of the allocation to the west of the existing campus. Developer contributions will be sought from the developers of relevant sites to fund the costs of providing this campus land, which will also be the subject of legal agreement with the relevant landowners.

Part D

The Council will provide additional phased permanent extension to secondary, primary and pre-school facilities as required to meet the need arising as a direct result of new housing development. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

3.75 The Council has carried out schools consultation to confirm how the new pre-school, primary and secondary education facilities and the necessary modifications to catchment areas as described above will be delivered in this cluster. Appropriate school catchment areas will be formed.

- Prestonpans Cluster*
- 3.76 This cluster comprises Preston Lodge High School and five associated primary schools. The primary schools are Prestonpans Infant School and Prestonpans Primary School, Cockenzie Primary School, Longniddry Primary School and St Gabriel’s R.C. Primary School. Preston Lodge High School is located in the centre of Prestonpans.
 - 3.77 Preston Lodge High School will help enable the development of the current allocation for Blindwells new settlement, which is a priority of SDP1. This arrangement may be a temporary one to provide capacity until an on-site permanent secondary education facility at Blindwells is delivered in association with any further expansion of the new settlement; however, Preston Lodge High School may provide the permanent secondary education solution for the new settlement if it cannot grow any larger than the current allocation. Depending on the outcome of feasibility work to test the potential for an expansion of Blindwells, into the medium or longer term a new secondary school facility may be provided in any expansion area. Provision of a secondary facility at Blindwells may then allow Preston Lodge High School to provide capacity in future for further growth in its catchment beyond the housing land allocation this plan makes in its catchment area.
 - 3.78 Prestonpans Infant and Primary schools have reached the limit of capacity that can be provided within their current organisational and delivery structures. Provision of temporary capacity at Cockenzie Primary School will provide a short term solution for Blindwells until a new permanent primary school is delivered at that site, meaning that no capacity will be available at Cockenzie Primary School.
 - 3.79 Longniddry Primary School has limited available capacity and this listed building has scope for some expansion on its current site which would be sufficient to accommodate the proposed allocation of housing land south of the East Coast Main Line at Longniddry. However, it is likely that further significant growth at Longniddry beyond the housing land allocated by this plan would require a new primary school facility to be provided as part of any development, either as a new primary school or as a lower or upper school to the existing facility. This would require schools consultation and would also require sufficient secondary school capacity to become available at Preston Lodge High School.

PROP ED2: Prestonpans Cluster Education Proposals

Part A

The Council will provide additional phased permanent extension to Preston Lodge High School to meet the need arising from proposed new housing development in the cluster including the Blindwells allocation (BW1). Developer contributions will be sought from the

developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

Part B

The Council will provide additional phased permanent extension to pre-school and primary schools as required to meet the need arising as a direct result of new housing development. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

- 3.80 The Council has carried out schools consultation to confirm how the new pre-school, primary and secondary education facilities and the necessary modifications to catchment areas as described above will be delivered for Blindwells, if necessary on a phased basis. Appropriate catchment areas will be formed. If further new education facilities were to be provided in this cluster, additional schools consultation would be required and the outcome of any such consultation cannot be predetermined.

Blindwells Cluster

- 3.81 The pre-school, primary school and secondary school catchment boundaries for this cluster are currently defined by the boundaries of the existing Blindwells allocated site, but the site currently contains no education facilities. The approach for the provision of education capacity for the current allocation is described at paragraph 3.75 and 3.76 above. This approach will allow viable pupil rolls to develop at pre-school, primary and secondary school level in association with housing development at the new settlement.
- 3.82 If the potential for a significant expansion of the new settlement is confirmed, into the medium or longer term a new secondary and further new pre-school and primary school facilities will be required at Blindwells. The phasing and timing for the provision of these facilities and the formation of catchment areas for them needs to be confirmed by the Council and will reflect the Council's intentions for the phasing of development across the site and the nature of the comprehensive solutions for the development of the wider area.

PROP ED3: Blindwells Cluster Education Proposals

Part A

To accommodate the pupil product from the current allocated area, the Council will provide education capacity as follows:

- i. Secondary school capacity at Preston Lodge High School; and
- ii. Temporary pre-school and primary school capacity at Cockenzie Primary School; until
- iii. Permanent pre-school and primary school capacity at Blindwells is delivered.

Developer contributions will be sought from the developers of the allocated site, including for the provision of campus land, to deliver this provision which will be the subject of legal agreement.

Part B

If Blindwells is able to expand further to provide 6,000+ homes, to meet the need arising from the new settlement the Council would require the provision of the following on an appropriate phased basis:

- i. a new secondary school;
- ii. at least three new primary schools and pre-school facilities;

Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, including for campus land, which will be the subject of legal agreements including with the landowners of the relevant campus land.

- 3.83 The Council has carried out schools consultation to confirm how the phased provision of new pre-school, primary and secondary school education facilities and the necessary modifications to catchment areas as described above can be delivered for Blindwells. Appropriate pre-school, primary school catchment areas and potential secondary school catchment areas will be formed by the Council on an appropriate phased basis.

Tranent Cluster

- 3.84 This cluster comprises Ross High School and nine associated primary schools. The primary schools in Tranent are Windygoul Primary School, Sanderson's Wynd Primary School and St Martin's R.C. Primary School. The settlements of Macmerry, Ormiston, Pencaitland, Elphinstone, Humbie and Saltoun are served by their own primary schools. Ross High School is located in the centre of Tranent.
- 3.85 There is a need for significant additional education capacity at primary and secondary level to support the housing development proposed in the Tranent cluster. The cumulative impact of the proposed sites is anticipated to utilise the full capacity potential of Ross High School, and will require the relocation of its existing car parking facilities.

- 3.86 Windygoul Primary School south of Tranent requires more campus capacity to accommodate the current anticipated pupil roll. The proposed housing site Windygoul South at Tranent (PROP TT1) will assist with the provision of additional campus land for this facility so it can expand to meet these demands as well as to enable the provision of capacity to accommodate other proposed sites in the schools' catchment area. Similar considerations may exist in relation to Elphinstone primary school, where expansion land may be required to the south of the existing campuses of that facility too.
- 3.87 Elsewhere the proposed sites are likely to utilise the vast majority of any available pre-school and primary school capacity or additional pre-school and primary school capacity that could be provided, and this is particularly true at Ormiston Primary School which is a listed building. Generally, the housing land allocations in the catchment areas of the smaller schools will help to sustain their pupil rolls.

PROP ED4: Tranent Cluster Education Proposals

Part A

The Council will provide additional phased permanent extension to Ross High School to meet the need arising from proposed new housing development in the Tranent cluster. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

Part B

The Council will provide additional pre-school and primary school campus land at:

- i. Windygoul Primary School, Tranent;
- ii. Elphinstone Primary School;

Developer contributions will be sought from the developers of relevant sites to fund the costs of providing this campus land, which will also be the subject of legal agreements including with the landowners of the relevant campus land.

Part C

The Council will provide additional phased permanent extension to pre-schools and primary schools as required to meet the need arising as a direct result of new housing development. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

- 3.88 The Council has carried out schools consultation to confirm how new secondary and primary school catchment areas will be formed in the Tranent cluster. Such changes are required to respond to the phased amendment of primary and secondary school catchment boundaries required in association with Blindwells new settlement. If new education facilities were to be provided in the Tranent cluster, schools consultation would be required and the outcome of any such consultation cannot be predetermined.

Haddington Cluster

- 3.89 This cluster currently comprises Knox Academy and five associated primary schools. The primary schools are Haddington Infant School and Kings Meadow Primary School, Yester Primary School and St Mary's R.C. Primary School. A fifth associated primary school is proposed in association with the strategic housing site at Letham Mains, Haddington. The provision of additional capacity at Knox Academy to support the proposed sites will require the replacement of school sports pitches.
- 3.90 The significant constraint is primary education capacity at Haddington. Haddington Infant and Primary School have significant capacity constraints beyond that needed to accommodate the proposed sites. Yester Primary School has sufficient capacity to accommodate the housing site allocated by the previous plan in its catchment. While it has potential for further expansion beyond the capacity needed to accommodate proposed sites, the roll of the school makes good use of its capacity and is stable.
- 3.91 Whilst a new primary school is planned at the Letham Mains site, it has not yet been delivered and it is required to support that development. It will need to be made larger than currently anticipated to accommodate the proposed expansion of the Letham Mains allocation and associated school catchment reviews will be needed. Schools consultation has been carried out to establish how new pre-school and primary school education facilities and amended school catchment boundaries will be delivered by the Council.

PROP ED5: Haddington Cluster Education Proposals

Part A

The Council will provide additional phased permanent extension to Knox Academy to meet the need arising from proposed new housing development in the Haddington cluster. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

Part B

The Council will provide new permanent pre-school and primary school facilities on land at Letham Mains. Developer contributions will be sought from the developers of the relevant sites to fund the costs of this permanent provision, including for campus land, which will also be the subject of legal agreement with the relevant landowners of the campus land.

Part C

The Council will provide additional phased permanent extension to pre-school and primary schools as required to meet the need arising as a direct result of new housing development in their catchment areas. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

- 3.92 If further new education facilities were to be provided in this cluster, schools consultation would be required and the outcome of any such consultation cannot be predetermined. However, at this stage it is not clear how further new primary school catchment areas could be formed in Haddington while making efficient use of existing facilities. Similar considerations may apply in respect of provision of any additional secondary school facilities in the cluster.

Dunbar Cluster

- 3.93 This cluster currently comprises Dunbar Grammar and five associated primary schools. The primary schools are Dunbar Primary School (P1-P3) / Dunbar Primary School (P4-P7), West Barns Primary School, East Linton Primary School, Innerwick Primary School and Stenton Primary School. The provision of additional capacity at Dunbar Grammar to accommodate proposed sites will require the replacement of school sports pitches.
- 3.94 Dunbar Primary School can be expanded to accommodate proposed sites. However, whilst this school may be able to expand further it is very large and will have an ever larger pupil roll once proposed sites are developed. A further expansion of the school beyond this would require more campus land and potentially different school management and delivery structures. In view of the significant housing expansions that have been completed and are proposed at Dunbar, the further expansion of Dunbar Primary School beyond that needed to accommodate proposed sites is not currently supported by the Education Authority. However, land is safeguarded adjacent to Dunbar Primary School southern campus so as not to prejudice the potential to consider a further potential expansion of the facility in the future.

- 3.95 Elsewhere proposed sites are likely to utilise the vast majority of available capacity or additional capacity that could be provided at existing primary schools in the cluster. Generally, the housing land allocations in the catchment areas of the smaller schools will help to sustain their pupil rolls.

PROP ED6: Dunbar Cluster Education Proposals

Part A

The Council will provide additional phased permanent extension to Dunbar Grammar to meet the need arising from proposed new housing development in the Dunbar cluster. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

Part B

The Council has safeguarded additional campus land adjacent to Dunbar Primary School (southern campus), Dunbar for education use so as not to prejudice the Council's ability to consider the potential for a further expansion of the facility in future.

Part C

The Council will provide additional phased permanent extension to pre-school and primary schools as required to meet the need arising as a direct result of new housing development in their catchment areas. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

- 3.96 If new education facilities were to be provided in this cluster, schools consultation would be required. The outcome of any such consultation cannot be predetermined. New education facilities would be required and appropriate catchment areas would also need to be formed.

North Berwick Cluster

- 3.97 This cluster currently comprises North Berwick High School and five associated primary schools. Law Primary School is in North Berwick and the settlements of Aberlady, Athelstaneford, Dirleton and Gullane all have their own primary schools. North Berwick High School is in North Berwick.

- 3.98 An expansion of North Berwick High School is committed to accommodate sites allocated by the previous local plan. The LDP continues to safeguard land adjacent to the Mains Farm site and to the west of the high school campus for the further expansion of the high school facility. Expansion of Law Primary School is also committed to accommodate sites allocated by the previous local plan, but the school is highly unlikely to be able to provide any more capacity on its expanded campus. The expansion of Law Primary School is to be contained by a realignment of the Haddington Road and delivered on land in the Councils control and land is safeguarded to accommodate this too.
- 3.99 Elsewhere the proposed sites are likely to utilise the vast majority of any available primary school capacity or additional primary school capacity that could be provided. Generally, the housing allocations in the catchment areas of the smaller schools will help to sustain their pupil rolls. Land to the south of Gullane Primary School may be required to expand its campus in to part of the adjacent site proposed for housing development.

required to meet the need arising as a direct result of new housing development in their catchment areas. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

- 3.100 If new education facilities were to be provided in this cluster, schools consultation would be required and the outcome of any such consultation cannot be predetermined. However, it is not clear how new primary school catchment areas could be formed in North Berwick while making efficient use of existing facilities. Similar considerations may apply in respect of provision of any additional secondary school facilities in the cluster.

PROP ED7: North Berwick Cluster Education Proposals

Part A

The Council will provide additional phased permanent extension to North Berwick High School to meet the need arising from proposed new housing development in the North Berwick cluster. Developer contributions will be sought from the developers of housing land to fund the costs of this permanent provision, which will be the subject of legal agreements.

Part B

The Council will provide additional campus land at:

- i. North Berwick High School;
- ii. Law Primary School;
- iii. Gullane Primary School;

Developer contributions will be sought from the developers of relevant sites to fund the costs of providing this campus land, which will also be the subject of legal agreement including with the landowners of the relevant campus land.

Part C

The Council will provide phased permanent extension to pre-school and primary schools as

Community Facilities

Community Centres

- 3.101 The Council operates a number of community centres across the County, as listed below. These make an important contribution to the vitality and sustainability of communities, creating a sense of place and providing opportunities for people to meet and interact.
- 3.102 To accommodate the increased demand generated by new development, developer contributions will be sought towards the expansion of relevant community centres indicated below as set out in the Action Programme and the Supplementary Guidance on Developer Contributions.

PROP CF1: Community Centre Proposals

- Bleachingfield Centre (Dunbar)
- Elphinstone Community Centre
- Musselburgh East Community Learning Centre
- Ormiston Community Centre
- Port Seton Centre
- Red School Youth Centre (Prestonpans)
- Wallyford Community Centre
- Bridge Centre (Haddington)
- Longniddry Community Centre
- North Berwick Community Centre
- Pennypit Centre (Prestonpans)
- Prestonpans Community Centre
- The Fisherrow Centre (Musselburgh)
- Whitecraig Community Centre

Libraries

- 3.103 The Council operates a number of libraries across the area, as listed below. These offer a range of services and facilities in addition to lending books. In addition, the mobile library serves the whole of rural East Lothian and follows a fortnightly timetable.
- 3.104 To accommodate the increased demand generated by new development, developer contributions will be sought towards the expansion of relevant libraries indicated below as set out in the Action Programme and the Supplementary Guidance on Developer Contributions.

PROP CF2: Library Proposals

- Dunbar Library
- East Linton Library
- Gullane Library
- Haddington Library
- Longniddry Library
- Musselburgh Library
- North Berwick Library
- Ormiston Library
- Port Seton Library
- Prestonpans Library
- Tranent Library
- Wallyford Library

Sport Centres

- 3.105 The Council recognises the importance of conducting an active and healthy lifestyle and is committed to providing healthy choices for residents and visitors. East Lothian has a number of sports and leisure facilities. The majority of Sports Centres are run by enjoyleisure, a charitable trust dedicated to providing services to the people of East Lothian on behalf of the Council. The Mercat Gait Centre is managed by FES FM on behalf of the Council.
- 3.106 To accommodate the increased demand generated by new development, developer contributions will be sought towards the expansion of relevant sports centres indicated below as set out in the Action Programme and the Supplementary Guidance on Developer Contributions.

PROP CF3: Sport Centre Proposals

- Aubigny Sports Centre (Haddington)
- Dunbar leisure Pool
- Loch Centre (Tranent)
- Meadmowmill Sports Centre (Tranent/Prestonpans)
- Musselburgh Sports Centre
- North Berwick Sports Centre
- Mercat Gait Centre (Prestonpans)

Open Space and Play Provision

- 3.107 The best open spaces are parts of wider networks and are designed to complement surrounding places, buildings and land uses. High quality open spaces are multifunctional and contribute to an area's sense of place and identity. Multifunctional open spaces can help to create better places, for example by including provision for a range of formal and informal leisure activities, by integrating with active travel networks, by including provision for biodiversity as well as forestry and woodland planting. Where appropriate open space may contribute towards flood management. Future management and maintenance arrangements for all types of open space are essential and arrangements for this must also be agreed as part of any planning permission.
- 3.108 Open space and play facilities are essential to the attractiveness of East Lothian's towns and villages. Opportunities to take part in organised sport and informal recreation are essential to the quality of life enjoyed in the area. It is the Council's objective to ensure recreational facilities and open spaces form part of the green network, are well designed, easily accessible and meet the needs of all in the community. This is essential to healthy lifestyles, community integration, physical and mental well being, and for general amenity, and can contribute towards objectives for biodiversity and resilience to climate change.
- 3.109 The LDP seeks to protect, enhance and promote the provision of new open space and play provision. The approach is informed by the Council's open space audit and strategy, which includes an assessment of playing field provision. The need for additional open space and playing fields in association with LDP strategy and sites has been based on this work. These documents assess how well the needs of East Lothian's communities are being met against the Council's standards and help to identify the new provision needed to meet increased demands while maintaining associated quantitative, qualitative and accessibility standards.

Protection of Open Space

- 3.110 The loss of areas of open space that have significant amenity or recreational value will be resisted by the Council, unless their function is not harmed or appropriate alternative provision can be made locally. The enhancement of existing open spaces is supported where this would address need in an area or lead to them becoming more multifunctional. The proposals map identifies larger areas of value as open space.
- 3.111 However, it has not been possible to identify all areas that have very local value either as areas for informal recreation or play, or as a setting for built development. Where an area with recreational, amenity or landscape open space potential not designated as such by Policy OS1 is proposed as a development site, the Council will consider its value as open

space based on the open space audit and strategy and its contribution to the amenity of the area: if the area makes a significant contribution the proposal will be assessed against Policy OS1.

Policy OS1: Protection of Open Space

Recreational, leisure and amenity open space and facilities, including outdoor sports facilities, that make a significant contribution to the recreational needs of the community or the amenity or landscape setting of an area will be retained in use as such. Alternative uses will only be considered where there is no significant loss of amenity or impact on the landscape setting and:

- i. the loss of a part of the land would not affect its recreational, amenity or landscape function, or
- ii. alternative provision of equal community benefit and accessibility would be made available, or
- iii. provision is clearly in excess of existing and predicted requirements

Change of use to Garden Ground

- 3.112 The Council receives a number of applications for the change of use of land to garden ground. In the countryside, this can have visual and landscape effects in domesticating the appearance of the countryside. Within settlements, housing estates are often laid out with the landscaping as an integral part of the design, to bring visual amenity to the scheme. These schemes can suffer from the incremental loss of this landscaping. While an individual piece of land can seem small and unimportant, the cumulative effect of several such permissions could make a considerable impact on the amenity of the area. Once one planning permission is granted, it is difficult to resist further applications, which could lead to a gradual erosion of the visual or recreational amenity of housing areas. If permission is granted, the land for which a change of use is approved may be subject to a legal agreement to prevent the development of a new dwelling on the land.

Policy OS2: Change of Use to Garden Ground

Provided other policies of the plan are met, change of use of public open space to garden ground will be supported if it would not result in unacceptable loss of visual or recreational amenity or harm the integrity of a landscaping scheme, or set a precedent that if followed would do so. In the case of a change of use of an area of countryside to garden ground any well-defined settlement boundary or landscaped edge must not be prejudiced. In all cases the area of the change of use must be small in scale and must not harm the character or appearance of the surrounding area.

Provision of New Community Services Facilities

Minimum Open Space Standards for General Needs Housing Development

- 3.113 The provision and distribution of new open space must be design-led and considered early in the design process. A network and hierarchy of open space should be provided to create a structured and understandable framework for development. In line with Policies DP1, DP2 and DP4 proposed open space networks for development sites must respond to the context and qualities of the site, using key natural and physical features, such as views, watercourses and woodland, as the basis for the position and/or alignment of new open space as well as the hierarchy and type(s) proposed. New open spaces should complement, extend and connect existing open spaces wherever possible, and links to the countryside and between habitats should be created so they also form part of the wider multifunctional Green Network. Local and town parks and civic spaces will be focal points for public access and they should be most easily accessible from higher density development.
- 3.114 The open space quantity standard is 60m² per dwelling. Provision of formal and informal open space is expected. Open spaces should be multifunctional and can include district, town and local parks, sports pitches and civic space. Civic spaces will have quality hard and soft landscaping of clear amenity value, providing public space to complement adjoining land uses and movement through them. Informal amenity open space should be part of parks and also include active travel routes, green corridors linking open spaces, woodlands and meadowlands and areas with biodiversity value and for seating and rest. When assessed against Green Space Scotland's Quality Criteria the Council expects district, town and local parks to achieve a minimum score of 70% and amenity green space to achieve a minimum score of 60%. The Council has set maximum catchments for facilities, including 2km for district parks, 1.2km for sports pitches and town parks, 400m for local parks and 800m for NEAPs, 400m for LEAPs and 240m for LAPs. New development will be expected to meet these standards. Each home should also be within 300m of the Green Network.
- 3.115 Where required by the Council, provision of open space for equipped play areas and allotments will be included within the overall open space requirement. SUDs areas may form part of informal open spaces subject to their design and provided they contribute to and do not harm the amenity value of the wider open space. Hard and soft landscaped areas must be provided. Incidental landscaped areas or areas of planting, footways, roads, private gardens, and allotments, will not contribute to open space requirements. Housing developments will normally be expected to provide open space on-site simultaneously with homes. The Council has set out its minimum open space requirement in Policy OS3 to be met through the provision of multifunctional open space networks. New settlements

and significant urban extensions may be expected to provide civic space to complement any mixed use areas. In deciding what type of open space is to be provided, guidance must be taken from the Guidance for Open Space and Play Provision Advice Box 2 below.

Advice Box 2: Guidance for Open Space and Play Provision

Number of Dwellings	Open Space and Equipped Play Area Requirement	Indicative Types of Open Space Provision
10 – 49	60m ² per dwelling	Formal / Informal
50-159	60m ² per dwelling Play area(s) (20 - 30m buffer) Possibly Allotments	Formal / Informal LAP(s) (100m ²) possibly LEAP (400m ²) Local Park (approx. 0.2 - 0.5 hectares)
160 – 499	60m ² per dwelling Play areas (20 - 30m buffer) Possibly Allotments Possibly Sports Facilities Community Event Space Car Parking	Formal / Informal LAP(s), LEAP(s) possibly NEAP(s) (1000m ²) Local Parks (approx. 0.2 – 0.5 hectares) Town Park (approx. 0.5 – 1.0 hectares) Possibly Civic Space
500 upwards	60m ² per dwelling: Play area (20 - 30m buffer) Possibly Allotments Formal Sports Facilities Community Event Space Car Parking	Formal / Informal LAP(s), LEAP(s) NEAP(s) Local Parks (approx. 0.2 – 0.5 hectares) Town Park(s) (approx. 0.5 – 1.0 hectare) Possibly District Park Possibly Civic Space

- 3.116 The Council Open Space and Sports Pitch Strategy 2012 assesses the supply of recreational facilities and open space against existing and anticipated demand. This has informed the Council's site-specific development requirements for such facilities (e.g. sports pitches and changing facilities etc). The land take for such requirements will contribute towards the overall open space requirement of Policy OS3. The site specific requirements are detailed in the site briefs adopted as Supplementary Guidance to the LDP.

3.117 The Council Open Space and Sports Pitch Strategy 2012 also identifies areas of deficiency in standards of open space provision, in terms of type, quantity and quality. The Council uses this strategy to guide its Environmental Improvements Programme to ensure it can maintain its standards. It will also use this as a basis against which to negotiate appropriate developer contributions toward the maintenance of existing areas of open space where necessary. In exceptional circumstances it may be desirable to develop housing with reduced on-site open space provision. Such cases might include:

- brownfield sites where development costs are exceptional and there is a public interest in the development of the site;
- conversions of existing buildings where there is insufficient land available;
- infill/backland developments where there will be particular townscape advantages to be gained from reducing the requirement;
- developments catering for special needs groups, such as the elderly;
- housing in areas where provision in terms of quality, quantity, type and location will clearly be sufficient for new residents; and
- where there is sufficient open space in terms of quantity and accessibility, although, development may generate requirements for contributions to improve quality elsewhere.

Policy OS3: Minimum Open Space Standard for New General Needs Housing Development

Developments of 20 and more dwellings must provide open space in line with Section 1. On-site provision of open space is encouraged for developments of less than 20 dwellings but is not required. The Council will require developer contributions in lieu of on-site provision of open space in line with Section 2. Developers must make provision for the future management and maintenance of open space to the satisfaction of the Council.

Section 1: On-site provision

For developments of 20 and more dwellings the minimum requirement for on-site provision of open space is 60m² per dwelling. This will consist of provision of formal and informal open space as well as space for equipped play areas in accordance with Policy OS5. Arrangements must be in place for management and maintenance of all types of open space to the satisfaction of the Council.

Where a development forms part of an area for which there is a masterplan approved by the Council, open space must be provided in accordance with the approved masterplan; this may require greater provision than that described above.

Where developers justify an exceptional circumstance that is acceptable to the Council it may reduce the minimum standard.

Section 2: Off-site enhancement

The Council will require developer contributions toward off-site enhancement of existing open space in circumstances where:

- i. The open space to be enhanced is easily accessible from the development and is of a size that can accommodate increased use generated by the development; and
- ii. The fabric of the open space requires enhancement as a direct consequence of the development.

Arrangements must be in place for management and maintenance to the satisfaction of the Council.

Play Space in General Needs Housing Development

3.118 In providing for play, the needs of children of all ages and abilities should be taken into account. Opportunities for play should be provided as an integral part of the layout and design of development. This should include both equipped and informal provision. For larger housing developments, there should also be areas particularly laid out to encourage children's play close to where they live. Ensuring that the location of these areas takes into account the ability to safely access them from the housing areas they are intended to serve will also be important.

3.119 To ensure that play needs are met, the developer should agree with the Council's Healthy Living Manager the location, amount and type of equipment, benches, surfacing, layout and boundary treatment of play areas forming part of the network of open spaces to be provided. Equipment will not always be required and in consultation with the Council it may be agreed that an area should be laid out for informal recreation. In exceptional circumstances it may be desirable to develop housing without on-site equipped play space. Such cases may include those detailed for open space provision at paragraph 3.117 above.

Policy OS4: Play Space Provision in new General Needs Housing Development

Developments of 50 and more dwellings must provide play space in line with Section 1. The Council will require developer contributions in lieu of on-site play space provision in line with Section 2. In all cases Section 3 must be satisfied.

Section 1: On-site play space provision

For developments of 50 - 159 dwellings a play area suitable for children aged 0 – 8 will be required. For developments of 160 dwellings and more a play area, or areas, suitable for children aged 0 – 15 will be required.

Where a development forms part of an area for which there is a masterplan approved by the Council, play space must be provided in accordance with the masterplan; this may require greater provision than that described above.

Where developers justify an exceptional circumstance that is acceptable to the Council it may reduce the play space requirement.

Section 2: Off-site play space enhancement

The Council will require developer contributions toward off-site enhancement of existing play space in circumstances where:

- i. The play space to be enhanced is easily accessible from the development and is of a size that can accommodate increased use generated by the development; and
- ii. The play space requires enhancement as a direct consequence of the development.

Section 3: General requirements

Play areas must:

- i. Be of at least the sizes with a suitable buffer set out in Advice Box 2;
- ii. Be easy and safe to reach on foot;
- iii. Be well overlooked by surrounding dwellings;
- iv. Be equipped and laid out to a design as agreed with the Council;
- v. Be provided by the developer; and
- vi. Have arrangements in place for maintenance to the satisfaction of the Council.

Cemeteries

3.120 The Council has a statutory duty to provide burial grounds under the provisions of the Burial Grounds (Scotland) Act 1855, the Church of Scotland (Properties & Endowment) Act 1925, and the Local Government (Scotland) Act 1973 and the Local Government (Scotland) Act 1994. As provision of burial space is a statutory duty, the Council must plan for future provision, including as a consequence of new development in the area. The Council

adopted its Burial Ground Strategy in March 2015 and this prioritises the provision of burial space within each individual town and large village. In the event such local provision is not possible the Council will provide burial space at cluster level. Developers will be expected to make contributions towards the provision of burial spaces where the need for this will arise as a direct result of their development.

Policy OS5: Provision of Burial Space

New housing proposals of 20 or more dwellings must demonstrate how the burial provision needs that will arise as a direct result of it can be met. New housing development will be required to provide 38% of the additional households with 4.5 burial spaces per household. This provision can be met in the following ways:

1. if capacity exists or can be provided at an existing cemetery site, the developer will contribute a capital sum equal to the investment required to provide serviced lair space to meet the needs of their development; or
2. If no opportunity exists to extend an existing facility to accommodate the impact of the development the developer will be required to identify land within their master plan for the housing site and set aside funding to develop the land as a cemetery; or
3. In such other way as may be agreed with the Council, in line with its strategy.

3.121 Proposals for new cemeteries or cemetery extensions will be assessed on their merits and in particular with regard to the impact of such use on the Water Environment, in accordance with SEPA guidance - Land Use Planning System: Guidance Note 32. Land is safeguarded for cemetery potential cemetery extensions in the following locations:

PROP OS6: Potential Cemetery Extensions

Land is safeguarded for potential cemetery extensions or new cemeteries in the following locations, as indicated on the Proposals Map:

- New cemetery in Musselburgh Cluster;
- New cemetery in Prestonpans Cluster;
- Tranent Cemetery Extension;
- Pencaitland Cemetery – Investigate suitability of land east of current cemetery;
- West Byres Cemetery Extension – field north of current cemetery;
- East Saltoun Cemetery (extension to serve Humbie, Saltoun and Bolton);
- New cemetery in Haddington Cluster;
- Gladsmuir Cemetery Extension;
- New Cemetery in Dunbar Cluster – Land opposite Deer Park Cemetery;

- Prestonkirk Parish Church, East Linton (subject to archaeological investigations);
- Spott Church Cemetery Extension;
- Stenton Church Cemetery Extension;
- North Berwick Cemetery (further consultation on options required)
- Dirleton Cemetery Extension - car parking
- Aberlady Cemetery (subject to archaeological investigations)
- Whitekirk Cemetery (potential at Glebe Field)

Allotments

- 3.122 The enactment of the Community Empowerment Bill means that the Council will have a statutory duty to provide allotment ground according to demand. It will be obliged to create, maintain, report on and address the needs of waiting lists and will be required to ensure that no individual will sit on a waiting list for more than 5 years without offer of a fit for purpose plot. As provision of allotment space is a statutory duty, the Council must plan for future provision, including that which is likely to arise from new development.
- 3.123 The National Society of Allotment and Leisure Gardeners suggest a national standard of 20 allotments per 1,000 households. Overall demand in East Lothian is currently lower than this and is highest in the main towns. The area currently has 152 allotment plots with a further 36 planned (188). There are around 300 people on the waiting list. This means that for every 100 households in East Lothian there is currently demand for around 1 allotment plot. New allotment sites should have a minimum of 20 allotment plots, for ease of management and maintenance. The Council's allotment strategy will prioritise the provision of allotment space for each cluster area within each cluster area. In the event cluster provision is not possible the Council will provide allotment space at local authority level.

Policy OS7: Allotment Provision

New housing proposals of 20 or more dwellings must demonstrate how the need for additional allotment plots that will arise as a direct result of them will be provided. Allotment plots must be provided to Grade 1 standard in accordance with the Council's Allotments Strategy. New housing development must provide 1 allotment plot per 100 new households. This provision can be met in the following ways:

1. On-site provision may be sought as part of the overall open space for a development of 100 dwellings or more, and the Council may seek to provide additional allotments to meet backlog demand and to ensure efficient site management and maintenance;

2. If it is agreed that on-site provision is not desirable to the Council, then a contribution towards alternative off-site provision will be sought in line with the Council's allotment strategy either at cluster or local authority level;
3. If capacity exists or can be provided at an existing allotment site, the developer will contribute a capital sum equal to the investment required to provide serviced allotment plots to meet the needs of their development; or
4. In another way agreed with the Council, in line with its allotment strategy.

- 3.124 Land is safeguarded for allotment provision in the following locations:

PROP OS8: Allotment Provision

Land is safeguarded for allotment provision in the following locations, as indicated on the Proposals Map:

- Musselburgh Cluster: Land at Craighall and Wallyford
- Prestonpans Cluster: Longniddry
- Blindwells Cluster: Blindwells Development Area
- Tranent Cluster: Southern Expansion Area
- Haddington Cluster: Letham Mains Southern Extension
- Dunbar Cluster: Hallhill North
- North Berwick Cluster: Tantallon Road

Health and Social Care Provision

Primary Health Care

- 3.125 The primary care services provided by NHS Lothian have a major role in meeting the health care needs of an increased population. The NHS board has a duty to ensure all residents can register with a General Practice, through which they will access Primary Care Services. The services provided by NHS Lothian have a major role in health care provision. Health Improvement in its wider sense is being addressed through the Community Planning Partnership and the Integration Joint Board. The LDP identifies and safeguards the land for the continued operation of existing or provision of new facilities as appropriate. Where facilities are demonstrated as being surplus to requirements, provision is made for alternative uses to come forward at those sites.
- 3.126 East Lothian Council supports the wider provision of locally accessible health care facilities through the retention of adequate land for health care use. Where land was last used for public health care, alternative uses will not be considered unless the Council is satisfied the land is no longer needed. The following Policy applies to sites occupied by medical facilities such as hospitals and health centres.

Policy HSC1: Health Care Sites

The continued use of land currently occupied by public health care facilities is supported. A change of use will only be permitted if the Council, in consultation with NHS Lothian, is satisfied that the existing use is no longer required and its loss will not prejudice the availability of land for health care in East Lothian.

Provision of New Health Care Facilities

- 3.127 In addition to safeguarding existing health care facilities where required, the NHS Lothian Strategic Plan 2014 – 2024 sets out how NHS Lothian intends to address the health needs of the growing and aging population while improving quality of care, the health of the population and securing better value and financial sustainability. The strategic plan is also supported by a number of other strategies and documents¹¹. The Integration Joint Board Strategic Plan will include access to primary care as one of its priorities for the Health and Social Care Partnership.

¹¹ NHS Lothian: Our Health, Our Care, Our Future - Primary Care Premises: Strategic Overview; Primary Care Strategy: Demand Capacity and Access; Property and Asset management Investment Programme 2014 – 19.

- 3.128 Together these documents identify that the anticipated demographic changes and population growth in the area will require the provision of new facilities as well as the reprovision and repatriation of health care services across a modernised NHS Lothian estate. NHS Lothian and the East Lothian Health and Social Care Partnership have identified proposals to help address the increased demands for their services and additional projects may also be identified in future to accommodate the cumulative impact on new development in the area, and developer contributions may be required.

PROP HSC2: Health Care Facilities Proposals

NHS Lothian has identified the following proposals within East Lothian as part of its modernisation agenda and the delivery of these is supported by East Lothian Council:

1. A new East Lothian Community Hospital and Campus at the site of Roodlands Hospital in Haddington. It is scheduled to open in 2017/18 and will provide an Integrated Care Facility which will re-provide and repatriate health care services, including from Herdmanflatt Hospital in Haddington;
2. The Partnership is considering the remodelling of care services for the frail and elderly at Belhaven Hospital, Dunbar and at Edington Hospital, North Berwick. It is also considering the remodelling of the social care services in Belhaven Hospital, Dunbar and the Abbey Care Home in North Berwick. In addition the Partnership is considering the remodelling of services in Eskgreen Care Home in Musselburgh;
3. To service current demand for access to primary care, provision of additional GP capacity is being planned at, Prestonpans and Cockenzie/Port Seton. Recent increases in capacity have been delivered in Ormiston, Tranent and Musselburgh;
4. To accommodate additional planned growth a further new GP practice and a new facility will be required at Blindwells;
5. In addition, significant expansion or reprovision of the existing premises at Haddington, North Berwick and East Linton will be required. Significant increases in care home capacity are unlikely to be required in the future as the Partnership increases capacity to care for people at home;
6. Community capacity to enable early intervention and prevention work will be important and the Partnership will support provision of facilities such as 'community hubs' or multi-use areas where such activities can take place for all age groups and client groups.

- 3.129 A significant amount of work is being undertaken to identify the optimal form of housing provision for younger people with health and social care needs. This may have a significant impact on the supply and form of accommodation needed to accommodate around 500 people who currently live in supported settings and residential care within East Lothian or who are placed outside or are in transition to more independent settings. The plan will be finalised in early 2016 and plan for a three to five year period.

OUR INFRASTRUCTURE & RESOURCES

Connections: Transportation, Digital & Other Networks

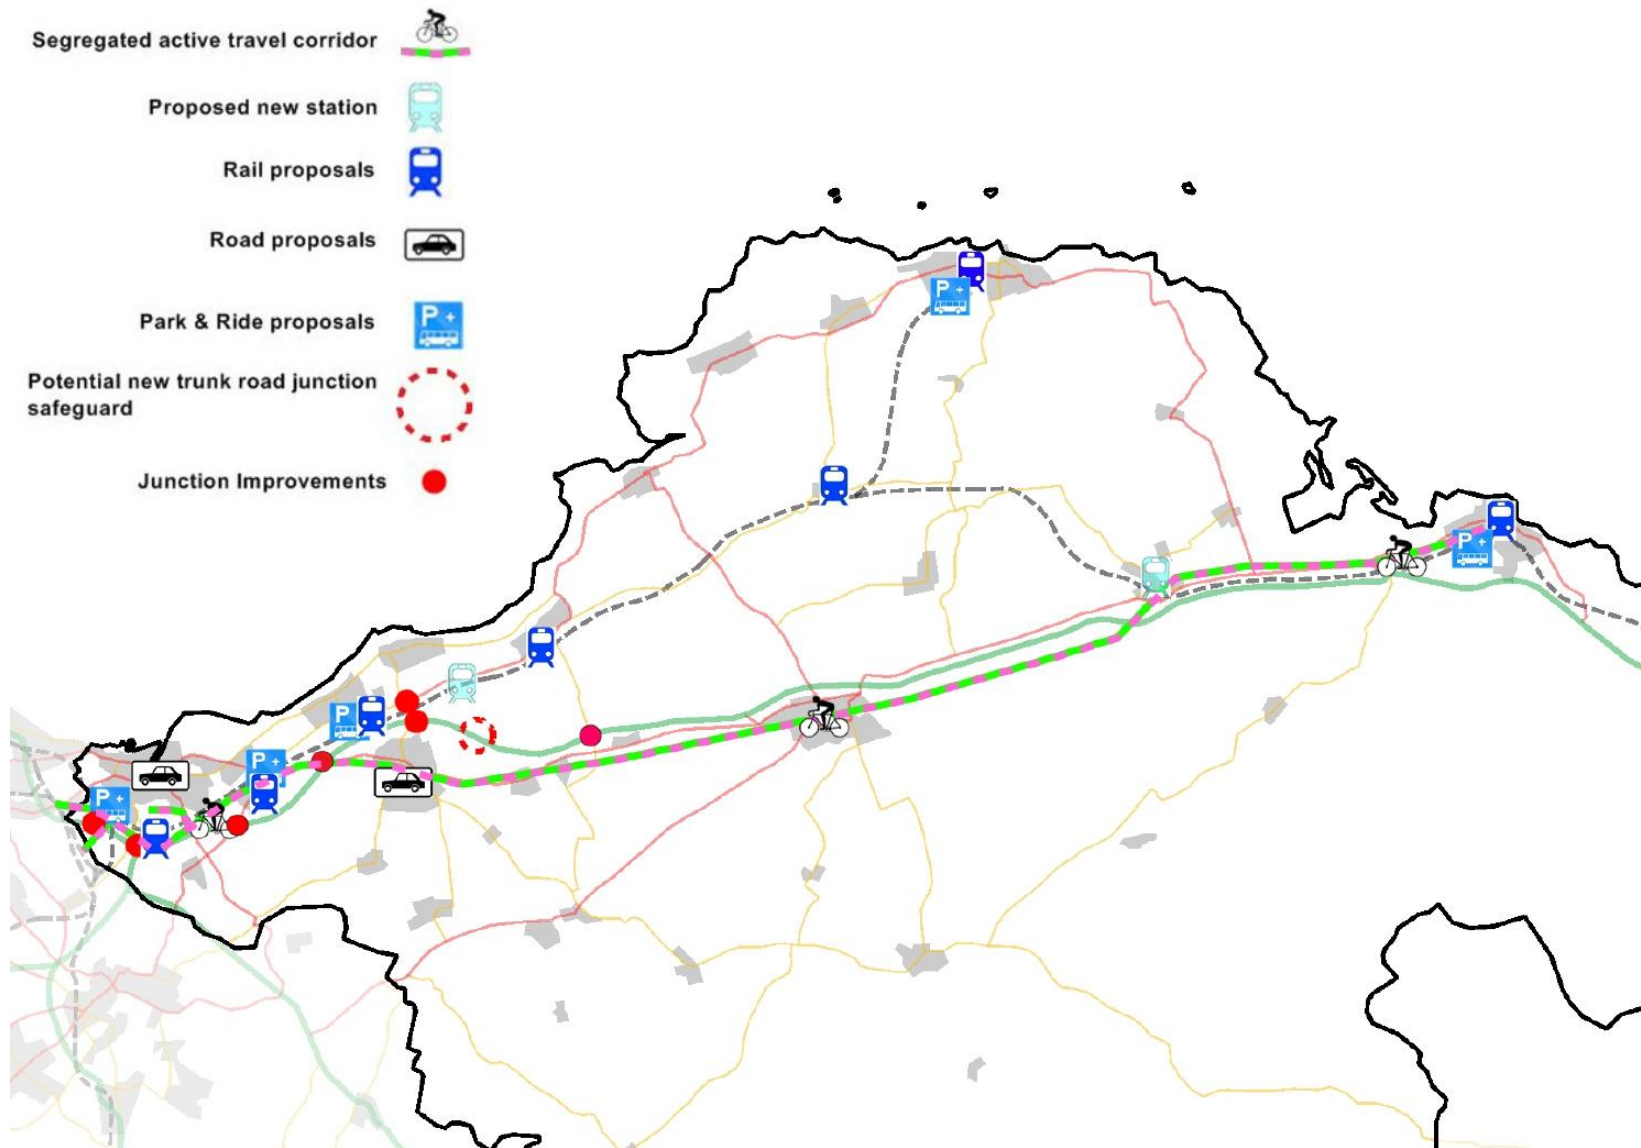

Background

- 4.1 Effective and efficient transport and digital communications networks are fundamental to today's lifestyles and to supporting sustainable economic growth. The transport network is needed to attract economic development and encourage job creation, to conveniently access work, education, services, leisure and recreation opportunities, and to allow for the delivery of goods and services. Digital communications can help reduce the need to travel and provide new ways to work, learn and to access information, goods and services. Investment in these networks, including with new development, will be required to maintain and enhance their performance and the area's competitiveness. This will help to ensure the need to travel is minimised, encourage the use of sustainable transport modes, and contribute towards the transition to a low carbon economy.
- 4.2 The LDP takes the Council's Local Transport Strategy 2015 – 2025 into account. The LDP seeks to integrate new development with East Lothian's existing transport networks and services and the LTS's vision for how these will change and be improved in future. The LTS promotes an enhanced active travel network that is integrated as part of East Lothian's Green Network and public transport options: this could provide a realistic alternative to the private car for some journeys, including longer ones, and may in time form part of the national walking and cycling network. The LTS vision includes improvements to the road and rail networks, including the enlargement of station car parks and platforms (for larger trains), the potential provision of new rail halts, and improvements to the trunk and local road network, including to junctions and interchanges. Real time travel information systems and integrated timetabling and ticketing are also promoted. The LTS will discuss where in the area there may be opportunities to support additional freight or passenger transport, including the potential for a new port related to energy development.
- 4.3 East Lothian is a relatively well connected place, but its transport and digital networks could be improved to reflect that it is a part of Edinburgh's housing and labour market areas. The majority of new development is planned in parts of East Lothian that are, or will become, connected via high speed digital networks or that are, or can become, accessible, including by public transport. Nodes where interchange between different modes of travel can occur are to be enhanced and will provide a focus for new development. Promoting local services and new development alongside sustainable transport options will help maximise accessibility and social inclusion. In areas of significant change, or in the design of sites, the Council will ensure that digital networks can be provided and that the order of travel priority can be walking, cycling, public transport then private cars where possible.

Transportation

Location of New Development

- 4.4 The location of new development has a major impact on transport systems and how people travel. New development should be located so as to allow choice of means of travel and to encourage the use of sustainable transport modes. The Council's policies seek to integrate land use and transport to encourage a reduction in traffic growth, minimise the length of journeys people are obliged to make and promote sustainable alternatives to the private car – public transport, cycling and walking. This is to be achieved by seeking to:
- support the town centre first principle by maintaining town and local centres facilities that are well served by public transport and accessible on foot or by cycle;
 - direct major travel generating uses to locations that reduce the need to travel and that are or can be made highly accessible by public transport, pedestrians and cyclists;
 - resist proposals for out-of-centre developments where their siting would encourage longer journeys, especially by private car;
 - increase public transport options and their frequency at transport interchanges, and make these nodes more accessible via an enhanced active travel network;
 - encourage a more mixed pattern of higher density development in highly accessible locations, consistent with design, amenity and environmental standards, where this could help reduce the need to travel and support viable public transport services;
 - introduce or contribute to traffic management and restraint measures which favour public transport, walking and cycling where appropriate;
 - maximise the use of information technology and introduce real time travel information systems as well as integrated timetabling and ticketing.
- 4.5 If a significant travel generating development would be reliant on private car use it should not be supported unless there is a way to provide sustainable transport options, including active travel. Travel Plans can encourage better practice and set out targets for the use of sustainable transport modes and measures to discourage private car use. Information technology can be used to encourage use of public transport and in some cases it may be appropriate to limit car parking provision as part of development. Yet there may situations when some types of development in less accessible locations is acceptable, such as in the countryside in line with LDP policy or where the nature of a proposal requires a specific location, including forestry or mineral operations. Notwithstanding this, improvements to the transport network to make locations more accessible particularly by public transport and active travel modes could help reduce reliance on the car, including the introduction of small park and ride sites on rural bus routes and development of the strategic path network.

4.6 For development proposals that are expected to generate a significant number of trips a Transportation Assessment will be required. Where new development creates travel demands, the Council will seek provision of, or contributions towards, necessary improvements to transport networks required as a direct result of it, including provision for public transport and the enhancement of active travel networks consistent with promoting an appropriate order of travel priority. Where specific improvements to the transport network are necessary, developers will provide these improvements, including contributions pro rata towards strategic mitigation. The Council will secure this mitigation by planning condition and / or legal agreement, as appropriate.

Policy T1: Development Location and Accessibility

New developments shall be located on sites that are capable of being conveniently and safely accessed on foot and by cycle, by public transport as well as by private vehicle, including adequate car parking provision in accordance with the Council's standards. The submission of Travel Plans may also be required in support of certain proposals.

Policy T2 : General Transport Impact

New development must have no significant adverse impact on:

- Road safety;
- The convenience, safety and attractiveness of walking and cycling in the surrounding area;
- Public transport operations in the surrounding area, both existing and planned, including convenience of access to these and their travel times;
- The capacity of the surrounding road network to deal with traffic unrelated to the proposed development; and
- Residential amenity as a consequence of an increase in motorised traffic.

Where the impact of development on the transport network requires mitigation this will be provided by the developer and secured by the Council by planning condition and / or legal agreement as appropriate (See Policy T6: Strategic Transport Fund).

Active Travel Networks

4.7 The LTS promotes an enhanced active travel network that is integrated as part of the Green Network and with public transport options. The Council seeks to encourage walking and cycling as modes of transport to promote sustainable travel, improve health and well being, and to maximise accessibility and social inclusion, particularly for those who do not own a car. Some parts of East Lothian are relatively well connected via roads and foot and cycle paths, including via repurposed railway routes and paths along river banks. Many of

these routes are included in the Council's Core Paths Plan and its Green Network Strategy. These provide active travel options which should be enhanced in association with new development in the area, and identify opportunities for extensions and connections to the active travel network. The Council will ensure that new development does not obstruct or damage existing foot or cycle paths, or other routes for public access, and that new development does not prejudice the future implementation of potential enhancements to the network within East Lothian. Wherever appropriate, extensions to the network of active travel routes should be provided or contributed towards in association with new development, particularly routes set out in the Core Path Plan or Green Network Strategy.

4.8 As part of this approach the Council proposes a Segregated Active Travel Corridor for East Lothian which aims to promote a priority route for pedestrians and cyclists. This is so active travel can provide a realistic alternative to the private car, including for longer journeys. In time this may form part of the national walking and cycling network. The route will generally follow the A199 corridor (former A1) and link the western boundary of East Lothian with Edinburgh through to Dunbar. The section of the route from Wallyford to Edinburgh will deviate from the original road route, and continue westwards to the East Lothian Council boundary, closely following the main East Coast rail line route. This route will provide a safe, better connected active travel route and facilities through East Lothian, and will link to other active travel corridors that lead to key destinations, including town centres, transport interchanges and other routes. In accord with Policy DEL1, the type and scales of development that will normally be expected to contribute to this fund are as follows:

- Proposals of 5 or more dwellings, including affordable housing;
- Employment, retail, leisure or tourism proposals of 1,000m² gross floor space or larger;
- All 'major' development proposals.

PROP T3: Segregated Active Travel Corridor

The Council will develop a new segregated active travel corridor within East Lothian and will work in partnership with local communities, public and the private sector to source appropriate funding mechanisms. The route and land for this is safeguard as illustrated on the Proposals Map.

Policy T4: Active Travel Routes, Core Paths and Green Network Strategy

The Council will protect its existing core path and active travel networks and ensure that new development does not undermine them, including the convenience, safety and enjoyment of their use. Relevant proposals will be expected to provide or contribute towards the extension of the network of core paths and active travel routes identified in the Core Path Plan and Green Network Strategy for the cluster area in which the development will be located, and towards a Segregated Active Travel Corridor for East Lothian as a whole. The nature of such provision and scale of contribution that will be expected from developers is set out in the Action Programme.

4.9 The Scottish Government published in 2010 its Cycle Action Plan for Scotland (CAPS). It has a vision that by 2020 10% of everyday journeys taken in Scotland will be by bicycle. This involves working in partnership with local communities, public and private sectors to achieve this vision. The main objectives are to:

- Place a greater emphasis on cycle education for young people and adults;
- Create a strong emphasis on the need for local cycling strategies and plans;
- Extend and improve cycling infrastructure together with more 20mph areas;
- Promote policy documents such as Cycling by Design and Designing Streets;
- Develop a “Respect” campaign aimed at all road users;
- Increase funding from across a range of sources;
- Rigorously monitor cycle modal share;

4.10 SEStran’s Strategic Cross Boundary Cycle Development document was approved by the SEStran board in 2015. The Council recognises that provision for walking and cycling to rail station, including cycle parking at stations, town centres and employment areas could be improved. Land is safeguarded for station car park expansions to increase their capacity for parked cars and to increase the provision for cyclists, including cycle racks and stores.

PROP T5: Cycle Route Network

The Council will continue to develop and enhance the cycle route network within a Cycling Strategy for East Lothian which is linked to regional and national strategies. This shall complement wider work to deliver and support the development of East Lothian’s Green Network.

4.11 A further specific priority for the Council is to ensure that people have access to safe walking routes within urban areas, including to transport interchanges. The Council will continue to implement a range of measures to deliver these routes by applying the principles of the Scottish Government’s “Designing Streets” to new developments and when retrofitting existing areas.

Policy T6: Reallocation of Road Space and Pedestrian Crossing Points

The Council shall explore opportunities to reallocate road space to pedestrians and cyclist, where this can be achieved without significant adverse impacts on the efficiency of the road network. The Council shall also review existing pedestrian crossings points to ensure that desire lines are being catered for and new crossings locations shall be introduced as necessary. New development proposals will be expected to adhere to these principles in their design and layout, and developers will be expected to provide or contribute towards the delivery of such measures where the need for this arises as a direct result of their development.

Public Transport

4.12 The affordability of public transport has a particular impact on the 23.5% (2011 Census) of East Lothian households that do not have access to a private car. Additionally, not all members of a household may have access to a car and there can be issues in areas of high car ownership or where public transport services tend to be less frequent.

4.13 Information technology and social media have increased the distribution and consumption of real-time public transport and travel information. The majority of transport operators now keep people informed about their journeys in this way. Further opportunities to develop these technologies are promoted to encourage greater use of sustainable transport options.

Policy T7: Information Technology

The Council will explore further opportunities to use Information Technology to improve and encourage use of sustainable travel options and supports the principle of related infrastructure provision, including as part of new development.

Bus Services

4.14 Bus services are provided on a commercial basis by bus operators, with some services subsidised by the Council for social inclusion and accessibility reasons. The Council is committed to maintaining bus services throughout the county. Where new development is located within a less accessible location, or where a development would support provision of a new service that is not currently viable, the developer may be required to make a financial contribution towards an agreed level of service for a period of time.

4.15 New developments should be conveniently accessible to bus services. The roads authority standard states that, ideally, no house or workplace should be more than 400 metres from the nearest bus stop. In areas of significant change, or in the development of a new settlement, there may be opportunities to make bus network enhancements, including the provision of additional bus stops or places for layover or waiting. These should be located where this would be of benefit to the development and wider area and to allow for integration with exiting or proposed provision of other transport modes where possible.

Policy T8: Bus Network Improvements

The Council will continue to liaise closely with bus operators to ensure the bus network has adequate coverage and is fit for purpose, including where new development is proposed. Where the need arises as a direct consequence of development, developers will be required to make

provision for infrastructure associated with bus network improvements and / or to make contributions towards an agreed level of service to ensure that their development benefits from sustainable transport options. This will include and may not be limited to the following bus infrastructure within or in proximity to their sites:

- Bus Stop & Shelters;
- Waiting facilities;
- Real Time Information at certain locations;
- Bus Lay over facilities (if appropriate);
- 'Kassel' kerbing;
- Electric charging points (If appropriate).

Existing Rail Stations

- 4.16 The Council recognises the importance of rail travel, particularly for accessing the centre of Edinburgh. There are currently two rail services to and from Edinburgh that stop at stations in East Lothian: a local service to North Berwick, and Dunbar is served by the operator of the East Coast franchise. Cross Country Trains and Scotrail now stop some trains at Dunbar, providing a two-hour frequency to Edinburgh and also offering services to a range of destinations in England.
- 4.17 Rail studies commissioned in 2004 and 2012 by East Lothian and Scottish Borders Councils concluded that a local service to Dunbar is feasible, which could make stops at other stations in the area. Both Councils are currently discussing with stakeholders how to progress matters. The Council will continue to seek capacity improvements on the east coast rail line for new stations, including at East Linton (which is subject to a STAG2 Appraisal), and for service improvements, particularly to Dunbar and North Berwick.
- 4.18 In view of the likely future demand for rail services, it is proposed to safeguard areas of land adjacent to existing stations at Musselburgh, Wallyford, Prestonpans, Longniddry, Drem, Dunbar and North Berwick (as shown on the Proposals Map) to construct additional car and cycle parking spaces and platform capacity for larger trains when the need arises. The LTS will consider further measures as and where required, including for any other transport interchanges and modes.

PROP T9: Safeguarding of Land for Larger Station Car Parks

Land is safeguarded adjacent to Musselburgh, Wallyford, Prestonpans, Longniddry, Drem, Dunbar and North Berwick stations to reflect the Council's aspiration that additional car and cycle parking spaces and storage facilities will be provided, as shown on the Proposals Map.

PROP T10: Safeguarding Land for Platform Lengthening

Land is safeguarded adjacent to the existing platforms at Musselburgh, Wallyford, Prestonpans, Longniddry, Drem, Dunbar and North Berwick stations to reflect the Council's aspiration that additional platform capacity will be provided, as shown on the Proposals Map.

Improvements to Musselburgh Parkway Station

- 4.19 The Council supports the principle of developing a Parkway Station at Musselburgh. This is a large-scale, rail-related, park & ride facility with terminal-style facilities and good access to the strategic road network. The existing station and adjacent land is the preferred location as such a facility here would significantly improve the accessibility of the Craighall mixed use expansion area including Queen Margaret University as well as the west sector of East Lothian, north-east Midlothian and east Edinburgh to main line rail services.
- 4.20 The proposed site is adjacent to the existing Musselburgh rail station and is well located in relation to road and public transport links. A Parkway Station here could be accessed from the A1 using a modified junction to be provided at QMU. An appropriate area of land is safeguarded for the car park and station buildings, south of the rail line and north of QMU, as shown on the Proposals Map. Such a proposal would be dependent upon external funding and support.

PROP T11: Safeguarding Of Land for Musselburgh "Parkway" Station

Approximately 3 hectares of land is safeguarded at Musselburgh station to reflect the Council's aspiration that a "Parkway" station with associated car parking, public transport facilities, access road and buildings be delivered in an area incorporating the existing and land south-east of the Mucklets Road bridge.

New Rail Station at East Linton

- 4.21 The rail study commissioned by the Council in 2004 identified a potential site for a new rail station at East Linton on land to the north west of the old station site. The Council supports the introduction of a new railway station at East Linton which would promote further sustainable transport options from the eastern side of East Lothian direct to Edinburgh.
- 4.22 The Council is committed to seeking funding for the construction of the station and will continue to seek that the train operator provides a service. Land and access for a station at East Linton is safeguarded for a new rail halt as shown on the Proposals Map.

PROP T12: Railway Station Safeguarding At East Linton

Land capable of accommodating a new railway station, car park and access is safeguarded adjacent to the East Coast Main Line at East Linton as illustrated on the Proposals Map. Provision for road access to this potential station site has been made through the adjoining housing site. Development that would prevent the use of this land for a station will not be permitted. The Council will maintain its efforts to source appropriate funding and the provision of a service.

New Rail Station at Blindwells

- 4.23 The siding and connection to the East Coast Main Line at Blindwells will be included in the masterplan for the Blindwells site. This will provide an opportunity to develop, subject to feasibility studies, a new station in the longer term as the new settlement develops.

PROP T13: Railway Station Safeguarding At Blindwells

Land capable of accommodating a new railway station, car park and access shall be safeguarded adjacent to the East Coast Main Line at Blindwells to reflect the Council's aspiration that a new station be provided here. The most suitable location for a station shall be investigated as part of the masterplanning process. Provision for road access to this potential station site must be made through any scheme coming forward on the site.

Safeguard of Former Longniddry-Haddington Branch Rail Line

- 4.24 The Council recognises the potential of the former Longniddry-Haddington branch rail line to be re-used as a public transport link between Haddington, western East Lothian and Edinburgh in the longer term. The track bed is in Council ownership and will be protected from development and retained in use as a route for walking, cycling and horse riding.

Policy T14: Longniddry- Haddington Route Safeguard

The route of the former Longniddry-Haddington railway line is safeguarded for future public transport use and shall be retained in use as a cycle-walkway route during the plan period. This route now forms part of the core path network. Should this route be once again used for public transport then suitable alternative provision must be made for the core path. If the required studies confirm that the provision of a public transport service is both technically feasible and economically viable the Council, in consultation with the Regional Transport Partnership and other stakeholders, will identify and safeguard land for any necessary supporting infrastructure, including a station or halt facility appropriate to the chosen scheme. Stakeholders would include Network Rail, the train operator, Transport Scotland, the Local Access Forum and SUStans.

Trunk Road Improvements

- 4.25 East Lothian offers two main route choices when travelling to and from Edinburgh. Additional vehicular trips to and from the new housing and employment land allocations will have significant impacts on the road network. The East Lothian Traffic Model has identified that there is a need for additional capacity along the A1 corridor at the Old Craighall Junction and at the Salter's Road, Dolphingstone, Bankton and Gladsmuir Interchanges. While not part of the Trunk Road network, the Queen Margaret University Junction has also been highlighted as requiring improvement both as a result of development adjacent to it and to ensure proper trunk road network performance as a result of development more widely.

Potential New Trunk Road Interchange at Adniston

- 4.26 There may be potential for a new trunk road interchange at Adniston. When the A1(T) was constructed the site at Blindwells was operating as an open cast mine. An underpass at Adniston was provided to facilitate heavy vehicle movements between the mine and the A199. This underpass is not currently connected to the road network, but it could accommodate two way movement of high vehicles. It may be possible in future to use the underpass at Adniston to create a new trunk road interchange with the A1(T). The main structure exists, and only roundabouts and slip roads would be required.
- 4.27 However, an underpass at Adniston connecting a larger new settlement at Blindwells to the A199 without a new interchange here providing direct access to the A1(T) is not supported. This would increase vehicle flows at Tranent High Street, where there are capacity issues and potential air quality concerns. Nonetheless, so the Council's long term ability to consider the potential for an eastern Tranent by-pass is not prejudiced, this Plan safeguards land for a potential new trunk road interchange at Adniston, including land within the Blindwells allocated site and the safeguarded Blindwells Expansion Area, and also the potential alignment of a spur from it to the A199. The feasibility of a new trunk road interchange at Adniston and eastern Tranent by-pass will continue to be investigated by the Council.

PROP T15: Land Safeguard for New A1 Trunk Road Interchange at Adniston

Land for a potential new trunk road interchange at Adniston and potential eastern Tranent by-pass is safeguarded and the Council shall continue to investigate the feasibility of delivering these. Any development that would undermine the Council's ability to consider a future eastern Tranent by-pass with new A1(T) interchange at Adniston will not be supported.

Town Centre Car Parking Strategy

- 4.28 East Lothian Council has prepared a comprehensive parking strategy which shall improve efficiency of the current supply of car parking bays and reduce the negative impacts of parking on communities. The key areas that the strategy looked at were parking management, parking supply, enforcement and demand management.

Policy T16: Town Centre Parking Strategy

The Council will implement its parking strategy to improve efficiency of the current supply and reduce the negative impacts of parking within our communities.

Improving Road Safety and 20mph Zones

- 4.29 The Council will develop, implement, monitor and review a Road Safety Plan which shall help to prioritise investment in road safety measures to ensure they are as effective as possible. Analysis of road traffic collision data will be undertaken to identify where interventions are required. The introduction of 20mph speed limit zones in residential areas is an ongoing commitment of the Council and this initiative shall be extended further where supported by local residents.

Policy T17: Road Safety and 20mph Zones

The Council shall develop a road safety plan to further invest in road safety and further introduce 20mph speed limit zones in residential areas.

Electric Car & Bus Charging Points

- 4.30 The advancement of technology and greater life expectancy of batteries has seen an increase in the use of electric vehicles, which do not produce any harmful emissions. The Council recognises the potential of electric vehicles and how they can help reduce emissions within Air Quality Management Areas. Public Transport providers are now also considering hybrid buses that can switch to electric running in Air Quality Management Areas. This can reduce emissions and improve air quality and appropriate provision for such vehicles must be made if they are to be introduced. The Council supports the principle of the provision of electric vehicle charging points where necessary and appropriate, including as part of new developments.

Policy T18: Electric Car & Bus Charging Points

The Council will encourage and supports the principle of introducing electric vehicle charging points around both existing and proposed community facilities such as schools and retail areas.

Infrastructure Fund

- 4.31 A Transport Appraisal has informed the LDP and a detailed traffic model has been developed for the western side of the county. These identify a package of measures required to maintain the performance of the transport networks. The traffic model predicts changes in travel movements and has informed decisions on development associated infrastructure improvements with East Lothian. This is particularly relevant for the growth planned for by the LDP. Where it would be inappropriate for developers to provide, or fund the provision of, transport infrastructure in its entirety, financial contributions to an infrastructure fund maintained by the Council will be required. In accord with Policy DEL1, the type and scales of development that will normally be expected to contribute to this fund are as follows:

- Proposals of 5 or more dwellings, including affordable housing;
- Employment, retail, leisure or tourism proposals of 1,000m² gross floor space or larger;
- All 'major' development proposals.

Policy T19: Infrastructure Fund

A package of transportation measures for the area has been identified by the Council as necessary to mitigate the cumulative impact of planned development in the area. All relevant new development proposals will be expected to make contributions towards delivering the identified strategic transport interventions. Proposals for 5 or more homes, or 1,000m² retail or commercial leisure floor space or larger, or major development proposals, shall be:

- Required to contribute towards a transport fund managed by the Council for the provision of these measures; or
- Implement an appropriate part of these measures, in proportion to the potential impact of the development on the surrounding transport network.

Digital Communications Networks

- 4.32 Our economy and social networks depend heavily on high-quality digital infrastructure. Access to affordable broadband is a key Council priority and is in direct support of the Council Plan, Economic Development Strategy, Single Outcome Agreement and Digital Inclusion objectives. The East Lothian Next Generation Internet Connectivity Strategy defines priorities to improve the provision of internet connectivity across the Council area.
- 4.33 The best broadband provision is currently in the west of East Lothian and in Dunbar, with improvements expected to focus initially on the west before extending to other areas. East Lothian is targeted to reach 95% Next Generation Access (NGA) by 2017 through the Scottish Government 'Step Change' programme, however this focuses on providing basic broadband (minimum 2 Mbps). Not all premises having access to NGA are likely to benefit from superfast broadband speeds (greater than 24Mbps) but following commercial investment East Lothian is expected to achieve superfast broadband to 67% of premises. The four UK mobile operators in the UK, (Vodafone, O2, EE and Three) have 2G/3G presence in East Lothian. Some coverage of 4G services is available in the area close to Edinburgh. Most mobile networks offer poor coverage throughout the rural area, with 2G and 3G "not-spots" evident.
- 4.34 Planning has an important role to play in supporting digital communications capacity and coverage. The Council supports proposals for digital communications infrastructure in principle provided they will not have unacceptable environmental impacts. For proposals that would deliver entirely new connectivity – for example, mobile connectivity in a "not spot" – consideration will be given to the benefits of this connectivity for communities and the local economy. All components of equipment should be considered together and designed and positioned as sensitively as possible, though technical requirements and constraints may limit the possibilities. Developments should not physically obstruct aerodrome operations, technical sites or existing transmitter/receiver facilities. The cumulative visual effects of equipment should be taken into account. Emissions of radiofrequency radiation are controlled and regulated under other legislation and radiofrequency radiation is not a material planning consideration.
- 4.35 Developers are encouraged to explore opportunities for the provision of digital infrastructure to new homes and business premises as an integral part of development, for example ducting and fibre for broadband. This should be done in consultation with service providers so that appropriate, universal and future proofed infrastructure is installed and utilised.

Policy DCN1: Digital Communications Networks

The Council supports digital communications infrastructure in principle provided it will not have unacceptable environmental impacts. For proposals that would deliver entirely new connectivity, consideration will be given to the benefits of this connectivity for communities and the local economy.

Planning applications for digital communications equipment should demonstrate how the following options have been considered:

- mast or site sharing;
- installation on buildings or other existing structures;
- installing the smallest suitable equipment, commensurate with technological requirements;
- concealing or disguising masts, antennas, equipment housing and cable runs using design and camouflage techniques where appropriate; and
- installation of ground-based masts.

Applicants should also provide the following supporting information, where relevant:

- an explanation of how the proposed equipment fits into the wider network;
- a description of the siting options (primarily for new sites) and design options which satisfy operational requirements, alternatives considered, and the reasons for the proposed solution;
- details of the design, including height, materials and all components of the proposal;
- details of any proposed landscaping and screen planting, where appropriate;
- an assessment of the cumulative effects of the proposed development in combination with existing equipment in the area;
- a declaration that the equipment and installation is designed to be in full compliance with the appropriate ICNIRP guidelines for public exposure to radiofrequency radiation; and
- an assessment of visual impact, if relevant.

Other Networks: Major Hazard Sites & Pipelines

Major Hazard Sites and Pipelines

4.36 East Lothian contains a number of major accident hazard pipelines, as well as one licensed nuclear site and major hazard site. The Health and Safety Executive (HSE) has defined consultation zones around these sites and pipelines based on risk assessments and will be consulted on all relevant development proposals within these zones that are likely to lead to an increased population around the major hazard. Current HSE pipeline consultation zones are set out in Advice Box 3 below and indicated on the Proposals Map for information. The Office for Nuclear Regulation (ONR) will also be consulted on relevant development proposals within the consultation zones around Torness nuclear power station; the outer zone extends to 8km from the site.

Advice Box 3: HSE Pipeline Consultation Zones			
HSE Ref.	Transco Ref.	Pipeline Name	Outer Cons distance (m)
7919	2176	13 Feeder Drumeldrie Simprim	370
7967	2224	Pathhead/Pencaitland (L11)	37
7974	2232	Whitehill Farm/Musselburgh (L05)	16
7975	2233	Pencaitland/Haddington (L06)	20
7976	2234	Gladsmuir/Aberlady (L07)	20
7982	2240	Supply to Pencaitland (L08)	15
8391	2668	Pencaitland to Penston (L12)	36

4.37 All consultation zones could be subject to change during the lifetime of the Plan. Similarly, the types and scale of development proposals within consultation zones that will require to be referred to HSE or ONR are set out in detailed guidance published by them, which could be subject to review during the Plan period. Applicants should therefore confirm the up-to-date position with the Council.

4.38 In addition to existing sites and pipelines, consent is in place for a new gas pipeline between East Fortune and Cockenzie to transport gas to the proposed gas-fired power station at Cockenzie. The route of this pipeline is safeguarded by the Plan. If constructed this pipeline would constitute a major accident hazard pipeline and consultation zones around it would be defined by the HSE.

Edinburgh Airport Safeguarding Zone

4.39 A 30km 'official safeguarding zone' has been designated around Edinburgh Airport. This covers the western part of East Lothian, extending as far as Longniddry, Macmerry, and Pencaitland. Within this zone some types of development proposals will require consultation with the airport operator, for example wind turbines or other tall structures, or developments with the potential to interfere with the operation of navigational aids, radio aids and telecommunication systems. The extent of the Edinburgh Airport Safeguarding Zone is indicated on the Proposals Map.

Energy Generation, Distribution & Transmission

Background

- 4.40 The LDP helps facilitate the transition to a low carbon economy by supporting means of energy generation that help reduce greenhouse gas emissions. It seeks to support a diverse range of renewable and low carbon energy generation in appropriate locations as well as the development of heat networks, taking environmental, community and cumulative issues into account. Related Scottish Government objectives include:
- 30% of overall energy demand from renewable sources by 2020;
 - 11% of heat demand from renewable sources; and
 - the equivalent of 100% of electricity demand from renewable sources by 2020.
- 4.41 Proposals for non-renewable energy generation may be acceptable where carbon capture and storage or other emissions reduction infrastructure is in place or committed within the development's timeline and good environmental standards are secured. NPF3 supports the continued use of the Cockenzie Power Station site for thermal energy generation and carbon capture and storage and identifies it as a National Development.
- 4.42 Torness nuclear power station continues to operate with two reactors, and a British Energy Consultation Zone exists around the facility. There are no confirmed plans or timescale for decommissioning the station and the current generating licence there extends to 2023. If Torness Power Station were decommissioned this would bring significant implications for the planning process both in terms of the decommissioning itself, but also in terms of restoration, waste disposal and the after use of the site.
- 4.43 As with Cockenzie, a significant attribute of the Torness site is its location at the mouth of the Forth, its access to the trunk road and nearby rail network. It also has deep water harbouring facilities. NPF3 notes that the coastline between Cockenzie and Torness is an area of co-ordinated action and has potential to be a renewable energy hub: both locations also have high voltage grid connections. However, sections of the coastline between Cockenzie and Torness have international, national and local natural heritage assets and environmental assessment, including project level Habitats Regulation Appraisal may be required. The principle of an enhanced high voltage electricity transmission grid is supported in principle as National Development relevant to East Lothian.
- 4.44 The Scottish Government seeks to generate the equivalent of 100% of Scotland's gross annual electricity consumption from renewables by 2020 to achieve climate change targets. Most renewable energy proposals can be considered against relevant policies of the Plan but wind turbines raise particular planning issues and require their own policy.

Sustainable use of energy and heat in new development

- 4.1 The Council supports the principles of the 'energy hierarchy' in planning for new development: seeking to reduce the demand for energy in the first instance, then looking to maximise the energy efficiency of buildings, and then considering energy generation from renewable or low carbon sources. The spatial strategy of the LDP aims to reduce energy demand by minimising the need to travel. Energy efficiency is promoted through Scottish Building Standards, which are gradually increasing building energy performance standards over time, but planning can also have a role, for example in promoting use of Combined Heat and Power (CHP) schemes and other sustainable energy sources, and in identifying and supporting potential district heating schemes.
- 4.2 The Scottish Government's Heat Policy Statement seeks to promote reduction in the need for heat, efficiency of supply, and increased proportions of low carbon and renewable heat. Scotland's Heat Map highlights where there may be opportunities for decentralised energy projects across Scotland. The Council will support the principle of proposals for district heating networks based on low carbon or renewable sources, or that facilitate the more efficient use of waste heat from existing or committed heat generators. There may also be situations where there is potential for heat distribution from non-renewable sources with the potential to switch to renewable sources within the lifetime of the development. Where heat networks are not viable, the Council supports heat recovery technologies associated with individual properties.
- 4.3 Those parts of the Council area considered to have greatest potential for district heating networks from waste heat are Millerhill/Craighall (from a proposed Energy from Waste plant in Midlothian), Oxwellmains, Dunbar (from a consented Energy from Waste plant), and Cockenzie (from any future thermal power generation or other uses on the former power station site). These locations are illustrated on Strategy Diagram 3. Around these areas in particular, the Council expects that developers will evaluate the feasibility of delivering district heating, connecting to any existing schemes, and the potential to extend such a system to adjacent uses/sites, as part of a local heat network. This should be incorporated into the design of proposals where viable.
- 4.4 Other opportunities may arise from other heat producers. Proposals for significant heat producing uses should provide for use of excess heat where practicable, or ensure that the potential to use this in future is not prejudiced. In the specific areas identified above, or in any other areas where a district heat network exists or is planned during the lifetime of this Plan, developments should include appropriate infrastructure for connection, providing the option to use heat from the network. To ensure 'future-proofing' of developments in these areas, as a minimum pipe runs within developments should be safeguarded for later connection, including to the curtilage of the development site.

- 4.5 The Council has also been working with the Heat Network Partnership to prepare a heat strategy for the area. Outcomes from this work with relevance to planning may be reflected in supplementary planning guidance or in a review of the LDP, as appropriate.

Policy SEH1: Sustainable energy and heat

The Council supports the principles of the ‘energy hierarchy’ and promotes energy-efficient design in new development. Community heating schemes are encouraged where they would not harm amenity and could co-exist satisfactorily with existing or proposed uses in the area. Applicants are encouraged to submit an Energy Statement indicating how such matters have been addressed. Where a district heat network exists or is planned, developments should include appropriate infrastructure for connection or safeguards to allow future connection. In particular, the Council supports the principle of the creation of district heat networks at Millerhill/Craighall, at Oxwellmains, Dunbar and at Cockenzie provided they would not harm amenity and could co-exist satisfactorily with existing or proposed uses in the area. Proposals in these areas must not prejudice the potential for heat networks to be developed.

Low and Zero Carbon Generating Technologies

- 4.6 The Council is legally obliged to include a policy in the LDP that requires all new development to be designed to ensure new buildings ‘avoid a specified and rising proportion of the projected greenhouse gas emissions’ through use of low and zero-carbon generating technologies (LZCGT). The policy should cover three main elements: a proportion of emissions to be saved; at least one increase in the proportion of emissions to be saved; and a requirement that the savings should be achieved through the use of LZCGT (rather than energy efficiency measures).
- 4.7 Scottish Planning Policy recommends that such policies accord with the standards, guidance and methodologies of the building regulations and the Scottish Government has indicated that such policies could be linked to the Building Standards ‘sustainability labelling’ scheme. However, Building Standards promote a ‘fabric first’ approach for new construction and do not mandate the use of LZCGT, while ‘active’ sustainability labels merely indicate that minimum standards have been met partly through the use of LZCGT. An ‘active’ label does not demonstrate that a ‘specified proportion’ of emissions are avoided through use of LZCGT; indeed it does not imply any emissions reductions beyond minimum standards and may in fact result in less energy efficient buildings compared with other ways of meeting minimum standards.
- 4.8 The Council considers that it is desirable to avoid duplication with Scottish Building Standards. It will therefore require ‘active’ sustainability labels to be obtained for all relevant developments, with the most effective and proportionate way of implementing

this in practice to be the use of suspensive planning conditions, which will require evidence of the ‘active’ label to be submitted prior to occupation of the building.

- 4.9 For applicants to demonstrate the proportion of emissions that will be saved through LZCGT, calculations should be provided based on the Standard Assessment Procedure for Energy Rating (SAP 2009) in the case of dwellings, or the Simplified Building Energy Model (SBEM) for other buildings. These SAP or SBEM calculations should indicate the Dwelling Emissions Rate (DER) or Building Emissions Rate (BER), as appropriate, with the use of LZCGT, and compare this with calculations for the same building without LZCGT. These calculations will also be the subject of suspensive planning conditions, requiring details to be submitted and agreed prior to occupation of a building. LZCGT could include the technologies set out in Advice Box 4.

Advice Box 4: LZCGT Technologies

wind turbines	solar thermal panels	fuel cells
water turbines	photovoltaic panels	biomass boilers/stoves
heat pumps (all varieties)	combined heat and power units (fired by low emission sources)	biogas

- 4.10 It is likely to be more efficient for larger developments to incorporate site-wide LZCGT rather than providing individual solutions on each separate building.

Policy SEH2: Low and Zero Carbon Generating Technologies

All new buildings must include Low and Zero Carbon Generating Technologies (LZCGT) to meet the energy requirements of Scottish Building Standards, except for the following:

- Alterations and extensions to buildings;
- Changes of use or conversion of buildings;
- An ancillary building that is stand-alone, having an area less than 50 square metres;
- Buildings which will not be heated or cooled other than by heating provided solely for the purpose of frost protection;
- Buildings which have an intended life of less than two years;
- Any other buildings exempt from Building Standards.

Compliance with this requirement shall be demonstrated through obtaining an ‘active’ sustainability label through Building Standards and submission of calculations indicating the SAP Dwelling Emissions Rate (DER) or SBEM Buildings Emissions Rate (BER) with and without the use of the LZCGT. LZCGT shall reduce the DER/BER by at least 10%, rising to at least 15% for applications validated on or after 1 April 2019. For larger developments, encouragement is given to site-wide LZCGT rather than individual solutions on each separate building.

Wind Turbines

- 4.11 East Lothian already includes a number of wind farms and individual turbines. Large scale wind farm development is located in the expansive landscape of the Lammermuirs, while smaller scale wind turbine development is located throughout the more intimate landscapes of the lowlands and normally consists of individual and smaller turbines, or small groups of these.
- 4.12 Scottish Planning Policy requires the Council to produce a spatial framework for onshore wind farm development in accordance with a prescribed methodology, dividing the area into three groups as below. The spatial framework provides a strategic overview of the location of key constraints that may inhibit wind farm development and guides communities and developers towards areas where there is likely to be the greatest potential for wind farms.
- Group 1 areas comprise National Parks and National Scenic Areas, where wind turbine development is unacceptable, however these designations do not exist in East Lothian.
 - Group 2 areas include certain international and national designations, carbon rich soils, and areas within 2km of communities where separation is required for consideration of visual impact. Within Group 2 areas SPP indicates wind farms may be appropriate in some circumstances but overall the need for significant protection is recognised.
 - Group 3 areas are all other areas. Within Group 3 areas wind farms are likely to be acceptable in principle, particularly in areas where there is identified capacity in landscape terms, subject to detailed consideration and cumulative issues.

The areas as well as the Areas of Strategic Capacity are shown on the Spatial Framework Plan for Wind Farms including Area of Strategic Capacity.

- 4.13 The Council will consider all wind farm proposals against the spatial framework and will very carefully assess proposals against their impacts on relevant constraints within Group 2 areas. The boundaries of the designations underpinning the spatial framework could change during the lifetime of the Plan and any such change would also be taken into account. All proposals will also be considered against the full range of criteria in Policy WIND3.
- 4.14 Prior to the determination of a planning application for any wind farm the Council will require the landowner and any other parties with a legal or financial interest in the scheme to enter into a legal agreement to secure the complete decommissioning and restoration of the site and any relevant offsite works. This should include financial provision such that no decommissioning or restoration costs risk falling to the Council. The amount of financial provision required shall be informed but not bound by advice from an independent, suitably qualified contractor approved by the Council. This may also be required for smaller scale wind developments in some cases.

Policy WD1: Windfarms

Windfarms are considered to be groups of four or more turbines over 42m in height to blade tip and will be assessed against the spatial framework for wind farms as illustrated on the Spatial Framework Plan for Wind Turbines.

Wind farms within Group 2 areas will only be supported where the Council is satisfied that siting, design or other mitigation can substantially overcome any significant effects on the qualities of the relevant designation(s) that justify inclusion in the Group 2 area.

Appropriate provision will be required to secure financial provision for decommissioning and restoration.

- 4.15 Proposals for smaller scale wind development will generally have more local impacts and the spatial framework will not be relevant in guiding developers. Proposals for these turbines will be assessed against the Council's Landscape Capacity Study for Wind Turbine Development in East Lothian (2005), and Planning Guidance for Lowland Wind Turbines (2013). The latter document incorporates the findings of a Supplementary Landscape Capacity Study, which specifically addressed smaller turbine typologies and the lowland areas. Both documents have been adopted as supplementary planning guidance. The Council may update these documents during the Plan period. Proposals below 12m in height are not addressed in the Council's landscape capacity studies but they will generally be acceptable where they have a clear visual or operational relationship with other development.

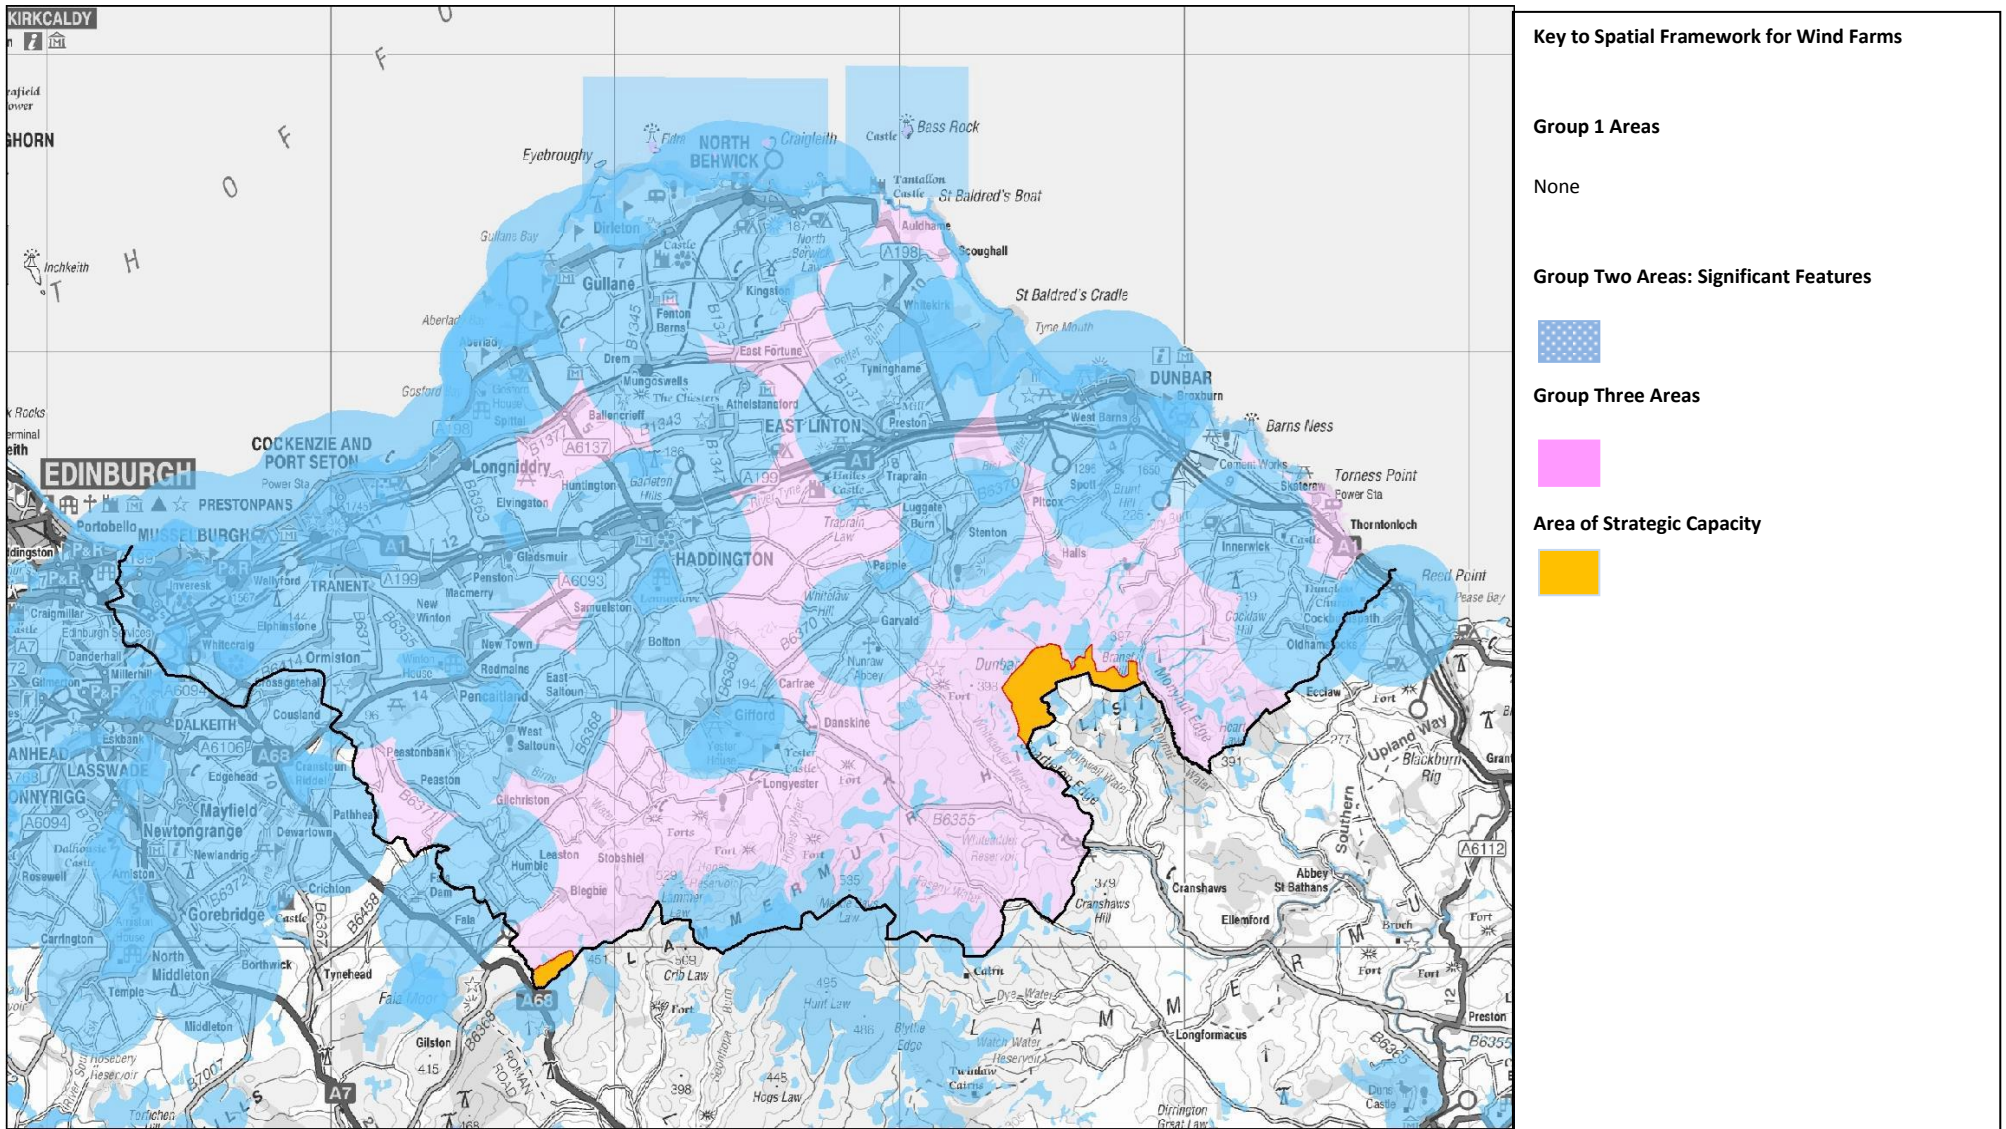

Policy WD2: Smaller scale wind turbine development

Smaller scale wind turbine development includes all non-windfarm development. Smaller scale wind turbines 12m and over will be supported where:

- a) they are consistent with the findings of the Landscape Capacity Study for Wind Turbine Development in East Lothian, and Planning Guidance for Lowland Wind Turbines or successor studies. Where development is for a number of turbines other than the specific typologies studied, the closest typology will be used;
- b) the proposed means of connection to the grid is underground; and
- c) the proposed design and colour of the wind turbine will minimise visual intrusion.

Wind turbines up to 12m will be acceptable in principle where they visually or operationally relate to other development.

Spatial Framework Plan for Wind Farms including Area of Strategic Capacity

Key to Spatial Framework for Wind Farms

Group 1 Areas

None

Group Two Areas: Significant Features

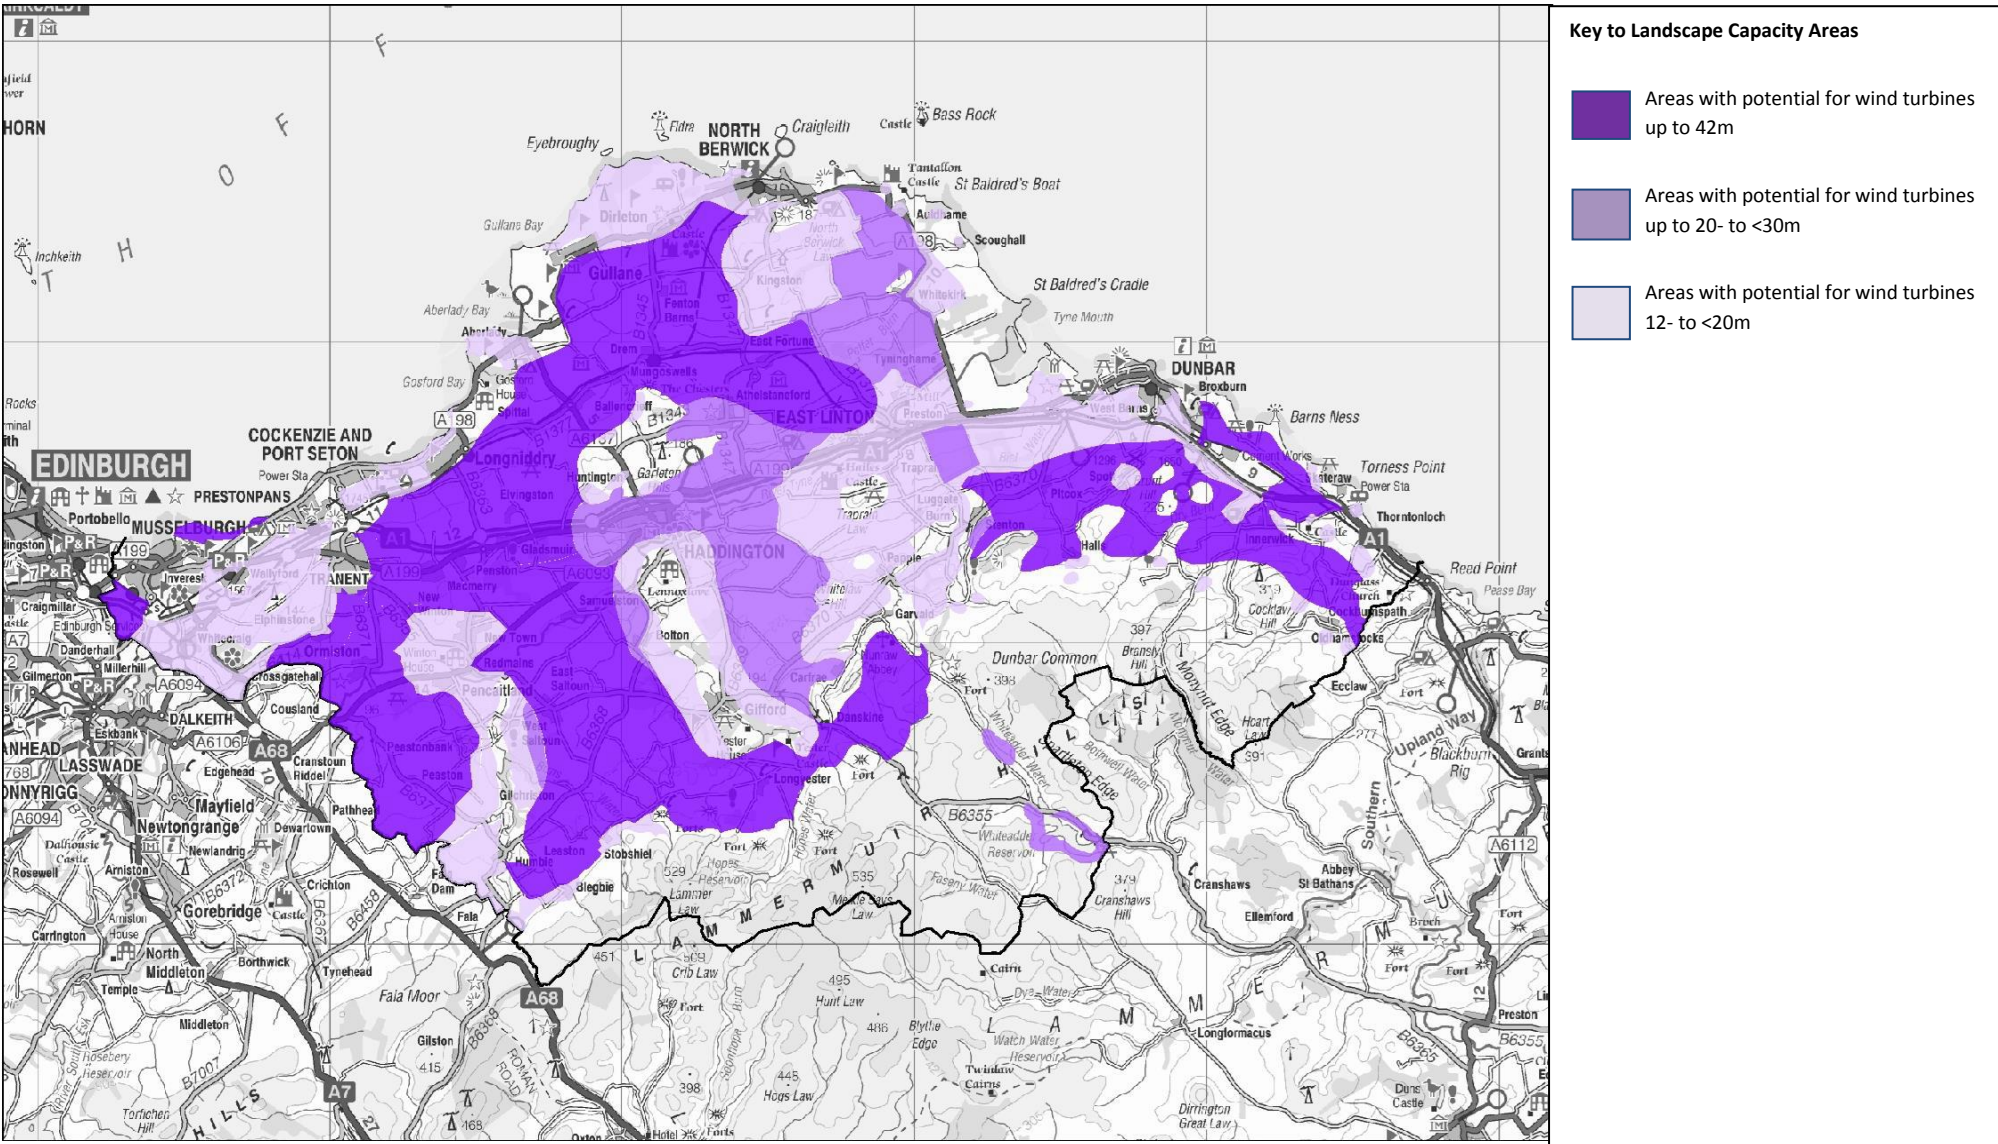

Group Three Areas

Area of Strategic Capacity

- 4.16 All freestanding wind turbine and wind farm proposals require to be considered against a number of factors as detailed below, in addition to policies WIND1 or WIND2 and other relevant Plan policies, to ensure their impacts will be acceptable:
- a) Cumulative impacts with other development, including with reference to the cumulative issues identified in Appendix 1;
 - b) Impacts on communities or individual dwellings, including from visual impact (including where wind turbine (s) would become dominant or overbearing in views from principal rooms of dwellings, or be present in such number, size or proximity that it is likely that a dwelling would become widely regarded as an unattractive place in which to live) noise, shadow flicker, or any other residential amenity issues;
 - c) Landscape and visual impacts, with reference to the Landscape Capacity Study for Wind Turbine Development in East Lothian and Planning Guidance for Lowland Wind Turbines including the landscape setting of settlements, important public views to or from settlements, long distance views, and views identified in the Landscape Character Area review, Historic Garden and Designed landscape citation, or the Statement of Importance for Special Landscape Areas. For wind turbines of 20m or over, the Council expects landscape and visual impacts to be assessed in accordance with SNH guidance 'Visual Representation of Windfarms (December 2014)'. Logos on turbines will not be acceptable. The Scottish Governments Control of Woodland Removal Policy shall also be considered;
 - d) Impacts on tourism or recreation, including on golf courses, the coast, and the key landmark features of North Berwick Law, Traprain Law and the Garleton Hills;
 - e) Impact on the recreational value of public access routes;
 - f) Impacts on aviation, defence interests, and seismological monitoring;
 - g) Impacts on the water environment, including drinking water quality;
 - h) Impacts on telecommunications and broadcasting installations, especially transmission links;
 - i) The 'carbon calculator' must have been completed to assess the impact of development on carbon rich or peat soils so the effects on greenhouse gas emissions can be taken into consideration as appropriate;
 - j) Where abnormal loads will be required on the road network in relation to the proposal, a route must be agreed with the Council at the time of application; and
 - k) Where the development is intended to be connected to the electricity grid, a feasible and acceptable route must be included at the time of application, where relevant such as for EIA projects or where consent is required;
 - l) impact on the functioning of existing wind turbines.
- 4.17 Benefits to communities and the economy arising directly from proposals will be taken into account where relevant. However, certain 'community benefits' will not be a material consideration in the planning process, for example voluntary monetary payments or other benefits in kind provided by developers that are not direct mitigation for impacts of the development. The document 'Scottish Government Good Practice Principles for

Community Benefits from Onshore Renewable Energy Developments' provides guidance for developers and communities.

Policy WD3: All wind turbines

Applications for freestanding wind turbine development will be supported subject to policies WIND1 and WIND 2 and provided the impact of turbines, access tracks, and any other ancillary development is acceptable in terms of the following considerations:

- a) Cumulative issues with other development;
- b) Impacts on communities or individual dwellings;
- c) Landscape and/or visual impacts,
- d) Impact on tourism or recreation;
- e) Impact on the recreational value of public access routes;
- f) Impacts on aviation, defence interests, seismological monitoring;
- g) Impacts on the water environment, including drinking water quality;
- h) Impacts on telecommunications and broadcasting installations, especially transmission links;
- i) The 'carbon calculator' must have been completed;
- j) Feasible and acceptable routes for any abnormal loads; and
- k) Feasible and acceptable connection to the electricity grid, where relevant.

The economic impact of proposals including local and community socio-economic benefit, the scale of contribution to renewable energy targets, and effects on greenhouse gas emissions will be taken into consideration as appropriate.

- 4.18 Access tracks serving wind turbines can sometimes be visually intrusive and can raise issues of drainage, including from lack of maintenance. Such impacts will also require to be assessed.

Policy WD4: Access tracks

Proposals for access and other tracks serving wind turbines must:

- a) be integrated satisfactorily into the landscape;
- b) minimise engineering and road-related earthworks;
- c) minimise any detrimental impact, such as soil erosion, on the environment including habitats and water bodies;
- d) have regard to existing paths or historic trackways; and
- e) demonstrate that a maintenance programme to the satisfaction of the planning authority will be put in place.

- 4.19 Wind turbines typically have a lifespan of around 25-30 years, and technology is improving all the time. Proposals to repower existing wind turbine or wind farm sites are likely to emerge as existing turbines near the end of their operational life. Such proposals will be assessed against policy WD3 and either policy WD1 or WD2 as appropriate, and will also be expected to use existing infrastructure where possible.

Policy WD5: Re-powering

Subject to compliance with Policies WD1, WD2 and WD3 as appropriate, proposals for re-powering of existing wind turbine and wind farm sites will only be supported if they use existing infrastructure where possible. If it is demonstrated that it is not possible to do so, appropriate provision must be made for restoration of relevant parts of the site to the Council's satisfaction.

Policy WD6: Decommissioning and Site Restoration

All wind turbines must be decommissioned and the site restored to an appropriate condition after the earliest of (a) expiry of planning consent; or (b) the failure of the wind turbine to produce electricity for a continuous period of six months, unless otherwise agreed in writing by the planning authority. This will be secured by a condition of planning consent. The applicant must demonstrate how decommissioning and restoration could be achieved at the time of application.

For wind turbines over 42m, prior to the issue of planning consent the planning authority will require the landowner and any other parties with a legal or financial interest in the scheme, to enter into a legal agreement to secure appropriate decommissioning and restoration of the site and any relevant offsite works including delivery of a financial guarantee such that no decommissioning or restoration costs risk falling to the Council. To inform the decision on the level of financial guarantee required, the applicant may be required to commission advice from an independent, suitably qualified contractor, the selection and terms of reference of which must be agreed with the Council.

Energy Generation and Transmission

- 4.20 The Scottish Government's Electricity Generation Policy Statement seeks to achieve a minimum of 2.5 gigawatts of thermal generation progressively fitted with carbon capture and storage technology. In the long term the Scottish Government expects that a carbon capture and storage network may emerge around the Forth because of the clustering of industrial and energy generation activities as well as the potential to link into existing pipeline infrastructure.
- 4.21 National Planning Framework 3 designates Cockenzie as part of National Development 3

'Carbon Capture and Storage Network and Thermal Generation'. While it safeguards the former Cockenzie Power Station site for future thermal power generation it notes that there may be opportunities for renewable energy-related investment and also that there may be potential for associated port-related development. If there is insufficient land available for competing proposals at Cockenzie, priority should be given to those proposals that make best use of the location's assets and bring greatest economic benefits. The Council considers the site's assets to include those related to the potential for thermal energy generation at the site, including brownfield land which is the site of the former power station building and the former coal handling yard, electricity grid connections, pylons and power lines, as well as its rail connection. Additional benefits include the site's proximity to the strategic road network and to the Forth.

- 4.22 NPF3's National Development 4, 'High Voltage Energy Transmission Network' also supports onshore links to offshore renewable energy installations and consent has been granted adjacent to the former coal store area for an electricity substation associated with the Inch Cape offshore wind farm.
- 4.23 Consent was granted in 2011 for conversion of Cockenzie Power Station from coal-fired to gas-fired generation. A new gas pipeline from East Fortune to the site was also consented in 2011. The consented gas-fired generation proposals cover only part of the site around the former power station building itself; other parts of the site, including the former coal store, would no longer be required for electricity generation under this scheme and would be appropriate for redevelopment in line with NPF3's aspirations for renewable-energy related investment, making best use of the site's remaining assets.
- 4.24 However, Scottish Power, the current owner of the site, confirmed in 2015 that it will not go ahead with the planned gas-fired power station and will instead demolish the original power station building. Scottish Power's decision means the entire site now requires to be safeguarded for alternative thermal power generation and Carbon Capture and Storage proposals, in accordance with NPF3's expectations. A safeguard for this purpose would be the only way to ensure that the Scottish Government's 'National Development 3' is not prejudiced.
- 4.25 However, within the lifetime of this LDP, the National Planning Framework will be reviewed by the Scottish Government and the status of or aspiration for the former Cockenzie Power Station site could change. While the outcome of any such review is unknown at this stage, it may be that the thermal power generation safeguard is removed by Scottish Government, and/or that a more flexible approach to the redevelopment of the site is taken. In such circumstances it would be appropriate for the Council to prepare Supplementary Guidance during the lifetime of this Plan to guide the redevelopment of the site for other purposes, in consultation with stakeholders and the community. It

would also be appropriate to prepare Supplementary Guidance in the event that a thermal power generation proposal is implemented on the site during the lifetime of this Plan to address the redevelopment of any remaining surplus land.

- 4.26 The site also includes important areas of public open space, such as the 'Greenhills', and parts of the battle landscape of the Battle of Prestonpans as well as scheduled archaeology the historic Wagonway as well as cabling and roads. The Council would wish to resist built development that would adversely affect these assets. Impacts on communities and on natural heritage interests would also be very important considerations.
- 4.27 There may also be potential for intermediate proposals on the site, such as temporary greening, that would not prejudice its future use. The Council would support such proposals, which may have also have potential benefits in terms of site remediation.

PROP EGT1: Former Cockenzie Power Station

The site of the former Cockenzie Power Station is safeguarded as a site for future thermal power generation and Carbon Capture and Storage, consistent with 'National Development 3' in the Scottish Government's National Planning Framework 3. Other forms of development within the site will not be supported during the lifetime of NPF3 to avoid prejudicing its future use for this National Development, unless and until an appropriate thermal power generation proposal is implemented and the extent of any residual land that could be used for other purposes has been confirmed.

If the NPF position is reviewed by Scottish Government during the lifetime of this Plan the Council will prepare Supplementary Guidance to guide the redevelopment of the site, if appropriate consistent with any revised NPF. If any thermal generation proposal is implemented and there is surplus land remaining, Supplementary Guidance will be prepared to guide redevelopment of this surplus land.

Any redevelopment proposal will be expected to make best use of the location's assets and bring significant economic benefits.

Torness Power Station

- 4.28 Torness Power Station is a major employer within East Lothian. It is expected to remain operational until at least 2023 and continues to be safeguarded for power generation. The Office for Nuclear Regulation will be consulted on relevant planning applications within the consultation zones around the site. If power generation ceases during the lifetime of this LDP the Council will seek to facilitate necessary works associated with the site's decommissioning and restoration as appropriate. Decommissioning would take many years and the site's long-term future can be considered in a review of the LDP.

PROP EGT2: Torness Power Station

Torness Power Station is expected to remain operational until at least 2023 and continues to be safeguarded for power generation. If power generation ceases during the lifetime of this LDP the Council will seek to facilitate necessary works associated with the site's decommissioning and restoration.

Forth Coast Area of Co-ordinated Action

- 4.29 Cockenzie and the Forth Coast area extending to Torness is identified in NPF3 as an 'area of co-ordinated action' and considered to be a potentially important energy hub within the NPF3 strategy, helping to deliver a low carbon Scotland. While Cockenzie is safeguarded for thermal power generation, it is noted in NPF3 as a location with potential for energy-related development and potentially for associated port-related development. As an area of co-ordinated action, an expectation of partnership working is placed on the Council, developers, and key agencies, to make best use of the land and infrastructure in the area and take forward a planned approach to development.
- 4.30 There are significant plans for offshore wind to the east of the Firths of Forth and Tay. Proposals for grid connections for these projects are emerging, requiring undersea cabling connecting with converter stations and substations. The existing high voltage transmission network infrastructure at Cockenzie and Torness, and that serving Crystal Rig wind farm in the Lammermuirs, may present opportunities for new grid connections. However, sections of the coastline between Cockenzie and Torness have significant natural heritage assets. One new substation is consented near the former Cockenzie Power Station to serve the proposed Inch Cape offshore wind farm. NPF3 expects developers to work together to minimise impacts by combining infrastructure where possible. Opportunities for new grid connections in proximity to existing electricity grid infrastructure at Cockenzie and Torness should be prioritised before the use of any other location on the coast is considered.
- 4.31 Proposals with both onshore and offshore elements will need to coordinate between land-based and marine planning systems. A marine license is likely to be required in addition to planning permission. Any environmental assessment processes should be aligned, ideally with combined screening, scoping and reporting covering all relevant consenting regimes. The coastline has a number of important natural and cultural heritage assets that must be taken into account.

PROP EGT3: Forth Coast Area of Co-ordinated Action

The Council supports the principle of electricity grid connections on the Forth coast from Cockenzie to Torness in order to facilitate off-shore energy generation, provided infrastructure is combined wherever possible and connection to existing infrastructure at Cockenzie and Torness is prioritised.

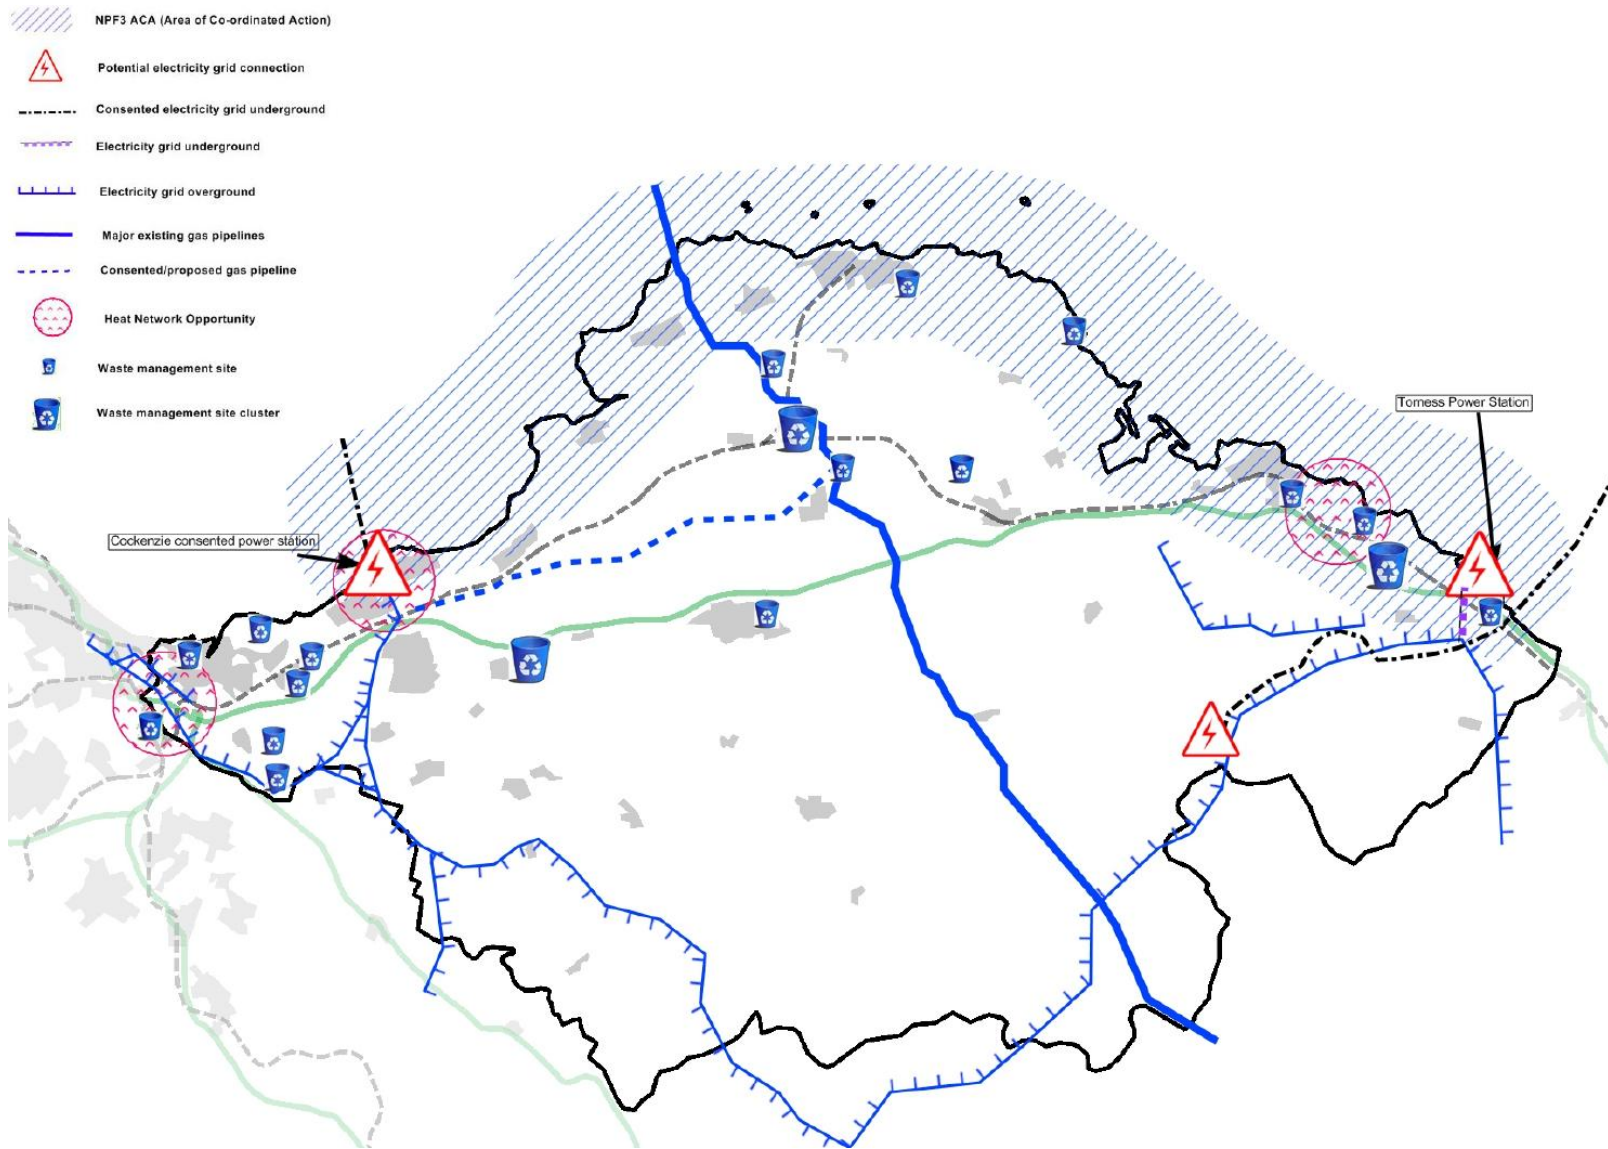

Enhanced High Voltage Electricity Transmission Network

- 4.32 East Lothian includes parts of the existing high voltage electricity transmission network. National Planning Framework 3 gives national development status to enhancing the high voltage transmission network in order to facilitate offshore renewable energy development and the export of electricity. The Council supports this in principle in appropriate locations. The environmental impacts of any proposals for new or upgraded high voltage onshore transmission lines will need to be carefully assessed and appropriate mitigation provided, including potential undergrounding cables. Proposals should minimise the landscape and visual impact, as well as impacts on communities, and the natural and built heritage. Where new lines replace existing lines that will become redundant the Council will seek removal of redundant lines as a requirement.

Policy EGT4: Enhanced High Voltage Electricity Transmission Network

The Council supports enhancement of the high voltage electricity transmission network, subject to acceptable impacts on the landscape, visual amenity, communities and the natural and cultural heritage, the provision of appropriate mitigation and the removal of power lines that would become redundant as a consequence of the implementation of the proposal.

Strategy Diagram 3: Energy Generation, Distribution and Transmission and Waste Facilities

Waste

Background

- 4.33 The Scottish Government’s Zero Waste Plan (ZWP) contains ambitious targets for recycling of waste in Scotland and requires local authorities to plan for all waste streams and promote the waste hierarchy. Scottish Planning Policy confirms the Scottish Government’s position regarding proximity and need and establishes a ‘national’ need for additional waste management facilities in the context of a current shortfall in provision.

Waste Management Safeguards and Policies

- 4.34 Existing and committed waste management sites are safeguarded by the Plan. Proposals that would compromise their operation will be resisted. The Council supports the principle of additional waste management developments on land designated for employment uses, subject to site-specific considerations; however, sites allocated for class 4 (business) uses may not be appropriate for certain technologies, depending on their impacts. A key consideration in applying the policy in all cases will be compatibility with surrounding uses. The origin of waste is unlikely to be a material consideration.
- 4.35 Proposals for waste management developments in other locations, including in the countryside, will be assessed against other relevant Plan policies. Potentially suitable locations might include:
- industrial and employment areas
 - degraded, contaminated or derelict land
 - working and worked out quarries
 - sites that have the potential to maximise the potential for the re-use of waste heat through co-location with potential heat users
 - existing or redundant sites or buildings that can be easily adapted
 - existing waste management sites, or sites that were previously occupied by waste management facilities
 - sites accessible to railways, waterways or the trunk and principal road network junctions
- 4.36 There is currently no need for more landfill capacity during the plan period, unless justified in the context of the Zero Waste Plan and the latest SEPA Landfill Capacity Reports.

Policy W1: Waste management safeguards

The following existing and consented waste management sites are identified on the Proposals Map and are safeguarded for waste management purposes. Development proposals that would compromise the operation of any of these sites will be resisted. Proposals for additional complementary waste management uses on these sites will be supported in principle.

The terms of this policy will also apply to any additional waste management sites consented during the lifetime of the Plan.

Policy W2: Waste management developments

Waste management development will be supported in principle on sites allocated for employment uses under policy EMP1, subject to site-specific considerations including compatibility with surrounding uses. Proposals in other locations, including in the countryside, will be assessed against relevant Plan policies. Any proposals for ‘Energy from Waste’ facilities should enable links to be made to potential users of renewable heat and energy, consistent with Policy SEH1. Proposals should indicate how the waste hierarchy has been addressed.

- 4.37 The good design and layout of new buildings are crucial to effective waste management. Specific provision should be made for space to allow for the segregation and storage of waste. In this regard, innovation within business environments will be encouraged. Waste management should be integrated to avoid adverse impact on the street scene. New streets should not need to accommodate larger waste collection vehicles than can be used within existing streets in the area and swept-path analysis can be used to assess layouts, but quality of place should not be undermined by provision for vehicles.

Policy W3: Waste separation and collection

All new development including residential, commercial and industrial properties should include appropriate provision for waste separation and collection to meet the requirements of the Waste (Scotland) Regulations and address the waste hierarchy. This should include:

- a. For all scales of residential development, appropriate and well-designed provision for storage of domestic kerbside collection bins and boxes;
- b. For all major residential, industrial or commercial developments, recycling facilities of an appropriate scale and at a suitable location;
- c. Appropriate access roads and sufficient space for servicing by collection vehicles.

Supplementary planning guidance will provide more detailed guidance on integrating sustainable waste management measures into new development.

Policy W4: Construction waste

Site waste management plans should be submitted with all planning applications for major developments and should detail the following, having regard to the waste hierarchy:

- a. Waste expected to be produced and how materials will be recycled/reclaimed;
- b. Steps to minimise waste and maximise the use of recyclates;
- c. Management of waste on site and leaving the site; and
- d. Relevant evidence of waste carrier/waste transfer.

Minerals

Background

- 4.38 Scottish Planning Policy (SPP) requires development plans to identify, review and safeguard areas of search for mineral extraction. Planning authorities are also to ensure a minimum 10 year land bank of permitted reserves for construction aggregates. A review has been undertaken at SESplan level insofar as the available landbank is concerned. SPP also requires development plans to minimise significant negative impacts from mineral extraction on the amenity of local communities, the natural heritage and historic environment, and other economic sectors important to the local economy.
- 4.39 SESplan requires the LDP to (i) safeguard minerals from sterilisation where the deposits are of a sufficient scale and quality to be of potential commercial interest and their extraction is technically feasible and may be carried out in an environmentally and socially acceptable way; (ii) identify areas of search for mineral extraction, including aggregates and coal; (iii) have a criteria-based policy to assess proposals against for mineral extraction including restoration and enhancement of sites; and (iv) encourage the use of secondary / recycled aggregates where appropriate.
- 4.40 It is also recognised that the area contains reserves of onshore gas including coal bed methane and that LDPs should support extraction subject to local planning considerations.

Protection of Mineral Reserves

- 4.41 Mineral reserves should be protected from sterilisation. This may occur where planning permission is granted for permanent development overlying the mineral deposits or some other use of land that would preclude mineral working in the vicinity. Although the Local Development Plan does not identify an area of search for opencast coal, it is possible that future technologies may be able to extract coal in ways that can be accommodated within more sensitive areas. Additionally, there may also be scope for prior extraction of shallow coal before permanent development takes place and Policy MIN 10 would apply.

Policy MIN1: Protection Of Mineral Reserves

Proposals for permanent development will not be permitted where this would result in the sterilisation of mineral deposits that have, or can be shown to have, a real prospect of being extracted economically and in conformity with development plan policies. The only exception to this will be in circumstances where the development is to meet the development requirements of the Strategic Development Plan.

Limestone

- 4.42 A Limestone quarry is active at Oxwellmains providing raw materials for cement manufacture. The LDP safeguards this resource to ensure its continued working.

PROP MIN2: Safeguard Oxwellmains Limestone Quarry

The existing operational Limestone Quarry at Oxwellmains is safeguarded for the continued extraction of this mineral resource.

Sand and Gravel

- 4.43 East Lothian has extensive deposits of good quality sand and gravel. These tend to be located within East Lothian's more sensitive landscape areas – river banks and foothills – and often comprise prominent landscape features in their own right. Planning policy must seek to manage extraction in a sustainable and environmentally acceptable way.
- 4.44 The established quarry at Longyester has operated as East Lothian's only sand and gravel quarry of any size for a number of years. In 2011 planning permission was granted for an extension to that quarry and it permits the extraction of sand and gravel over a 21 year period. The LDP will safeguard this area of extension to ensure its continued working. The LDP will also safeguard the sand and gravel quarry at Skateraw.

PROP MIN3: Safeguard Longyester and Skateraw Sand and Gravel Quarries

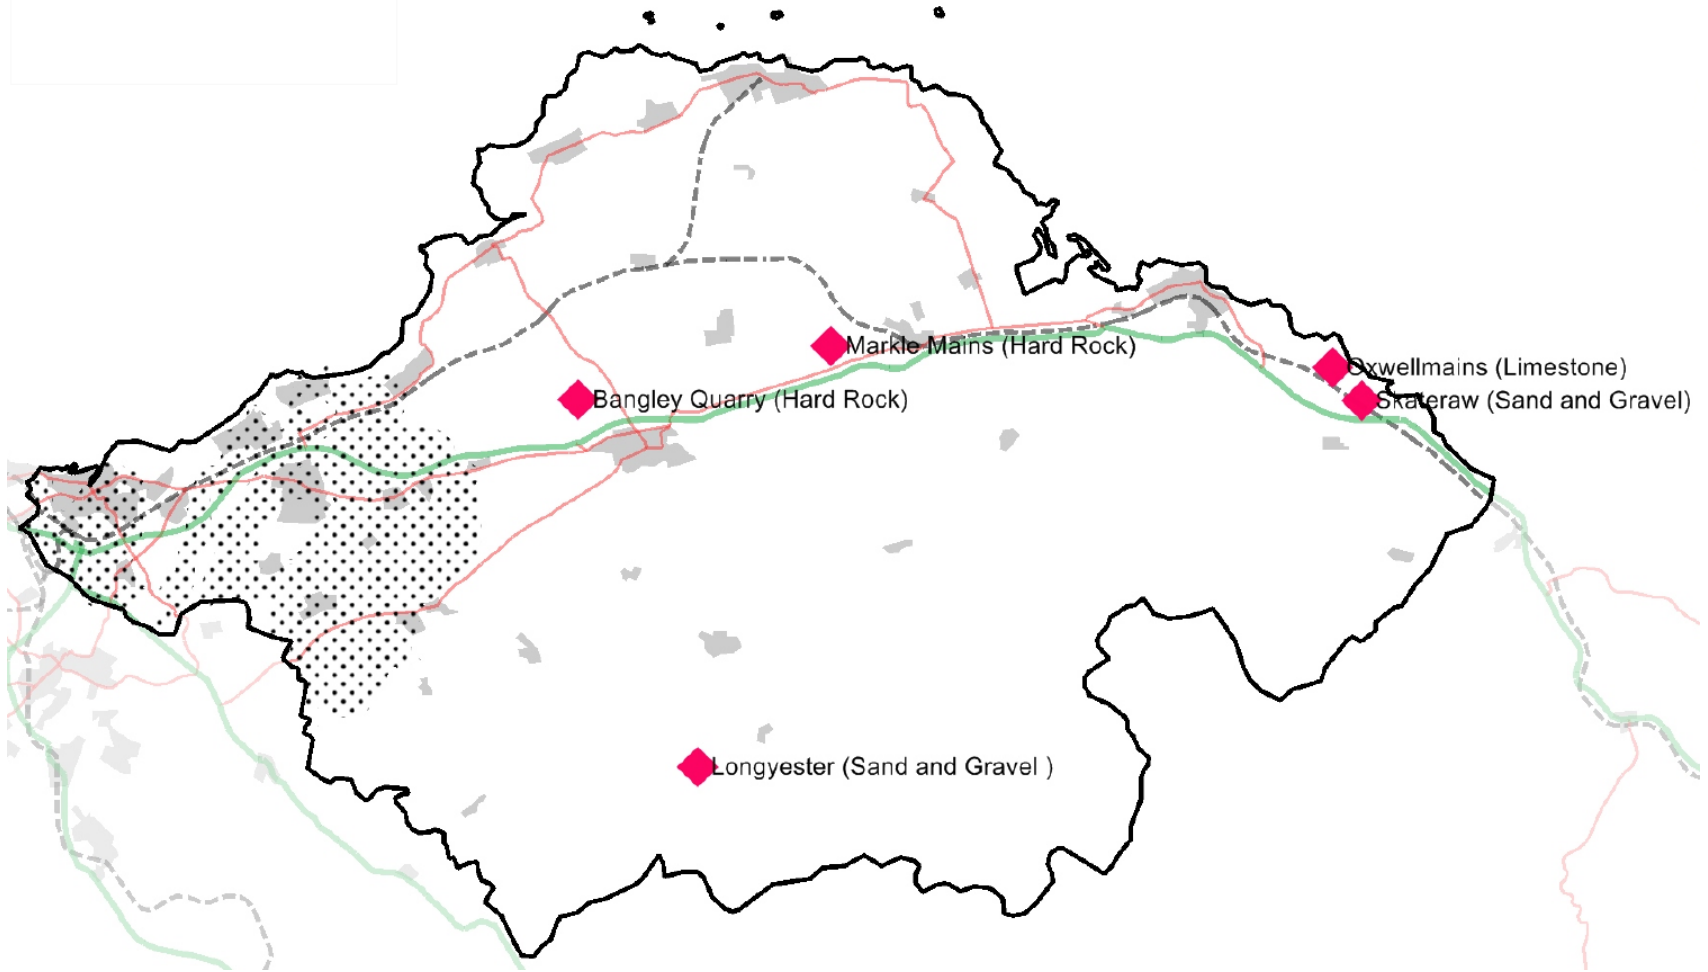

The existing operational sand and gravel Quarries at Longyester and Skateraw are safeguarded for the continued extraction of this mineral resource. The consented extension to Longyester sand and gravel quarry is also included within this safeguard designation.

Hard Rock

- 4.45 There is no shortage of hardrock in the SESplan area as the land bank is greater than 10 years. In East Lothian Banglely hard rock quarry is currently inactive, but has a reserve of around 14 years remaining, as does Markel Mains hard rock quarry, which is active. The LDP does not identify any new areas within East Lothian where extraction would be suitable in principle and, consistent with SESplan policy, adopts a presumption against proposals for new workings. In exceptional cases, for example where building stone of a particular type or quality is required and is not available from any suitable alternative operating site, consent may be granted to work a quarry for that specific purpose.

Strategy Diagram 4: Minerals

- East Lothian Coal Field
- Existing mineral workings

Policy MIN4: Hard Rock

Proposals for the winning and working of hard rock will not be permitted except (a) where related to existing workings or in exceptional cases, where resources of a particular type or quality are unavailable from an alternative source within a reasonable distance, and (b) where they are proven to be acceptable having regard to Policy MIN7 and other relevant development plan policies.

Opencast Coal

- 4.46 East Lothian has an extensive coal resource as illustrated on Strategy Diagram 4. However, there are currently no operational coal mines of any kind in East Lothian. Previous operations have ceased at Blindwells with British Geological Survey plans illustrating the current allocated site and land to the east of it as a “worked area”. A previous planning appeal for further opencast coal workings around Tranent and Elphinstone was dismissed due to the proximity of the proposed workings to established communities as well as the associated landscape and amenity impacts.
- 4.47 The East Lothian coalfield is subject to considerable constraints that militate against opencast coal extraction. These include: the scattering of communities throughout the coalfield, the intervisibility of these settlements (particularly in the Tranent, Ormiston and Elphinstone area) and any potential workings, and the potential for multiple applications for mineral extraction. The landscape that is underlain by shallow coal is attractive and open, lacking tree cover and an ability to absorb surface mineral workings without them appearing as intrusive features. Consequently, any area where opencast coal extraction may be acceptable is extremely limited and an area of search has not been identified. Yet, the East Lothian coal field has been identified on Strategy Diagram 4. The impacts of any extraction on communities, the environment and the built and natural heritage must be minimised and mitigated. The sustainable restoration/aftercare of any extraction site to beneficial use must also be secured and financially guaranteed.
- 4.48 Only if it can be demonstrated that there would be no significant adverse environmental impacts on communities, the environment and built and natural heritage would proposals for surface coal mineral extraction be supported. Any proposal would be assessed against minerals Policy MIN7.

Policy MIN5: Opencast Coal Extraction

Proposals for opencast coal extraction will be supported where they are proven to be acceptable having regard to Policy MIN 7 and other relevant development plan policies.

Onshore Oil and Gas

- 4.49 At 2015 there were no Petroleum Exploration and Development Licences (PEDL) issued within East Lothian for the exploration or development of Onshore Oil and Gas, including coal bed methane. However, the British Geological Survey has recently produced plans indicating that areas in the west of East Lothian have potential for the working of shale oil and gas including coal bed methane.
- 4.50 If any licences were to be granted during the plan period then the criteria-based minerals policy MIN7 will be used to assess any proposals for the extraction of onshore oil and gas, including coal bed methane, and any associated infrastructure. Factors in the assessment of any proposals for the extraction of onshore shale oil and gas will include the impact on neighbouring uses, communities and the environment, including the water environment, as well as on health and on amenity in general.

Policy MIN6: Onshore Oil and Gas

The extraction of onshore oil and gas, including coal bed methane, and associated infrastructure will only be supported where it is proven to be acceptable having regard to Policy MIN7 and other relevant development plan policies.

Assessment of Minerals Proposals

- 4.51 Applications for mineral extraction, including the extraction of onshore oil and gas and coal bed methane, will be assessed against the criteria in Policy MIN7. In respect of dust the Council will apply the framework proposed in the Newcastle Study and require that mineral operators demonstrate that any increase in PM10 levels in communities up to 1,000 metres from the site will not be significant. It will be for the planning authority to consider whether any such impact merits refusal on the grounds of air quality.
- 4.52 In respect of noise, the acceptability of any proposed surface mineral workings will be assessed in accordance with the provisions of PAN 50. If considered necessary, conditions will be attached to any grant of planning permission in accordance with the advice contained in the annex. Audible reversing alarms will only be permitted where it can be demonstrated that this is a legal requirement in terms of health and safety legislation. In these circumstances an acceptable audible reversing alarm system will require to be the subject of prior approval of the planning authority, taking into account the advice of the Senior Environmental and Consumer Services Officer.

- 4.53 Blasting will only be permitted if the developer can satisfy the planning authority that mineral extraction is not viable without blasting due to the diggability rating. If blasting is accepted as necessary, ground vibration and air overpressure from such blasting operations will be controlled by strict adherence to good blasting practice as contained in PAN 50. Where blasting is proposed, the planning authority will consider the need to agree or specify planning conditions relating to ground vibration.

Policy MIN7: Mineral Extraction Criteria

Proposals for surface mineral extraction or for the extraction of onshore oil or gas or coal bed methane will only be permitted where there will be no significant adverse impact on the environment or the local community. Proposals will be assessed against other relevant LDP policies and must meet all the following criteria:

1. There would be no unacceptable environmental impacts, including from disturbance, disruption, noise, dust, vibration, seismic activity, blasting, traffic, visual intrusion, landscape impact, or pollution, on any of the following:
 - a. the character, setting, appearance and amenity of the area, including any settlements;
 - b. natural heritage interests, including biodiversity and geodiversity;
 - c. all land, but especially prime agricultural land, carbon rich and rare soils;
 - d. the water environment;
 - e. air quality;
 - f. cultural heritage; or
 - g. any other sensitive receptors.
2. There would be no significant loss of public access to or enjoyment of the countryside, including the use of rights of way, the core path network and the John Muir Way;
3. The development would not be conspicuous when viewed from any of the following major transportation corridors and tourist routes:
 - a. any part of the A1 trunk road
 - b. the A199 between Macmerry and Dunbar
 - c. the Coastal, Hillfoots and Saltire tourist trails
 - d. the East Coast Main Line railway and North Berwick branch line;
4. The development would not have a significantly adverse cumulative impact on the environment or on local communities when combined with the effects of other existing or consented mineral workings;

5. Where there is a material risk of disturbance or environmental damage, this is outweighed by demonstrable and significant local or community benefits related to the proposal.
6. In the case of proposals for surface minerals extraction, the proposal is for a specific type, quality and quantity of minerals required to meet an established need, and which are not available from:
 - a. sites with existing permissions; or
 - b. through the use of suitable secondary or recycled materials.

Supporting Information

Policy MIN8: Supporting Information

Proposals for surface mineral extraction and for the extraction of onshore oil and gas including coal bed methane must be supported by the following detailed information on the proposals:

1. A detailed assessment of the expected environmental impacts of the proposals on landscape and built heritage features, including flora, fauna, the water environment, drainage, archaeology, local communities and residential property, and agricultural land and any Appropriate Assessment required under the Habitats Regulations. The use of photomontages is required to assist in the assessment of landscape impact;
2. The benefits that would result from the development locally, including details of any employment benefits.

Applications must also be accompanied by a Method Statement. The Statement must include details of the following, where relevant:

- i. the estimated total volume of the reserve to be worked;
- ii. the type(s) of mineral to be worked, expected quality and the market need for the mineral at the local, regional or national level;
- iii. the rate of extraction and timescale for working the reserve;
- iv. details of the proposed working methods, including details of any overburden storage, estimated noise levels and any proposals for blasting;
- v. proposed hours of operation;
- vi. an assessment of traffic generation resulting from the proposal, including details of the proposed volume, frequency and routing of traffic;
- vii. an explanation of measures to prevent the deposition by vehicles of mud and other materials on the public road;
- viii. details of mitigation measures proposed; and

- ix. details of restoration, aftercare and afteruse proposals, including details of finished ground levels, landscaping and drainage proposals. In the case of prime quality agricultural land, applicants must demonstrate that the site will be reinstated to agricultural land of a similar quality to that existing prior to mineral working.

In respect of proposals for the extraction of onshore oil and gas reserves including coal bed methane the following information must also be submitted:

- i. A risk assessment of the proposal and details of any appropriate buffer zone as specified in Scottish Planning Policy (2014); and
- ii. Information on the extent of operations for each relevant phase of the development, including exploration, appraisal and production.

Restoration and Aftercare

- 4.54 The quality of restoration and the after use of minerals sites are key considerations that will be taken into account before planning applications for mineral working are determined. Land used for mineral working must be restored to the highest possible standard at the earliest opportunity following the completion of mineral working. Cover against the possible financial failure of an operator will require a guarantee or bond.

Policy MIN9: Restoration And Aftercare

Planning applications for the extraction of minerals, including the extraction of onshore gas and oil and coal bed methane, must be accompanied by a fully costed and appropriately phased scheme for the restoration and/or after use of the site, including provision for its long term management and maintenance.

Unless satisfied that a suitable restoration fund is available, the Council will seek to conclude an agreement with applicants under section 75 of the Town and Country Planning (Scotland) Act 1997, or other appropriate legislation, to provide a restoration guarantee or bond adequate to cover the cost of restoration in the event of failure of the operator to carry out the agreed works.

Prior Extraction of Shallow Coal

- 4.55 Where possible, the extraction of coal prior to permanent development above workable coal reserves should be secured. New built development within the East Lothian Coalfield should not result in the unnecessary permanent sterilisation of known reserves of shallow coal, unless there is an overriding need for the development.

- 4.56 The removal of mineral resources at or close to the surface as part of any ground preparation works for new development is known as 'prior extraction'. Prior extraction normally takes a matter of weeks or months to complete as part of the ground works for a site, and may be completed on a phased basis. It has the potential to provide a positive income stream to the development and assist in the remediation of land. Early consultation with the planning authority is recommended to explain the nature of any prior extraction proposals and to establish any need for separate planning applications. Any requirement for prior extraction would normally be incorporated as a planning condition. The environmental impacts of such works are not normally dissimilar to those of other ground works or construction activities, but there may be a need for environmental assessments. It may also be that prior extraction is only possible or economically viable in a small part of a site, or is not possible or economically viable on any part of a site.
- 4.57 Prior extraction must be considered early in the design and master-planning stage of the development, and well in advance of any planning application. Early engagement with regulators and warranty providers is also recommended. Development proposals involving prior extraction will be assessed against Policy MIN10 and all other relevant development plan policies.

Policy MIN10: Prior Extraction of Shallow Coal

Proposals for new built development within the East Lothian Coalfield that would result in the unnecessary permanent sterilisation of known workable reserves of shallow coal will only be permitted if there is an overriding need for the development. In assessing if there is an overriding need for the development, the economic viability of extracting the coal will be taken into account. Unless extracting the coal is shown not to be economically viable, it will be necessary to consider the prior extraction of the coal before development takes place. Without prior extraction, development will only be permitted where it is demonstrated that prior extraction of the coal is not feasible. Any proposal for prior extraction must not have a significant adverse effect on local communities or the environment and be consistent with all relevant development plan policies.

DIVERSE COUNTRYSIDE & COASTAL AREAS

Background

- 5.1 While the LDP's spatial strategy guides the majority of new development to existing settlements in the interests of promoting sustainable travel patterns, it also seeks to support the diversification of the rural economy and the ongoing sustainability of the countryside and coast. The Plan supports development for agriculture, horticulture, forestry, and countryside recreation, as well as other forms of appropriate rural development with a need for a countryside or coastal location, including business, leisure and tourism developments. New homes in the countryside may also be supported in certain circumstances such as conversions of attractive rural buildings or affordable homes to meet local needs.
- 5.2 New rural development should be introduced sensitively to avoid harming the characteristics that attract people to live, work, recreate and visit East Lothian's countryside and coast. The Plan seeks to strike the appropriate balance between meeting the needs of the countryside to diversify and develop, while resisting the significant pressure for unsustainable forms of development that would promote car-based travel patterns, would suburbanise the countryside, or would harm the character or appearance of the rural area.
- 5.3 The Council has carried out a review of its rural landscapes, the Landscape Character Area (LCA) Review, based on the areas shown in SNH's Landscape Character Assessment 1998. The Council will have regard to the LCA Review in assessing planning applications. East Lothian's landscape is one of its key assets and its most significant, sensitive and attractive areas deserve enhanced protection, for example the landscape settings of some settlements, or landscapes of particularly special quality.
- 5.4 East Lothian contains a wide range of attractive, vernacular rural buildings, which contribute to local character and distinctiveness. Some of these are no longer required for their original purpose and present opportunities for positive re-use. The Plan supports the restoration of architecturally important rural buildings. This should be done in a way that maintains or complements the layout and appearance of traditional rural buildings or groups of buildings. Advice can be found in the Council's Farm Steadings Design Guidance.

Advice Box 5: Defining the 'countryside' and 'coastal areas'

For the purposes of the LDP:

- Countryside is defined as all areas of East Lothian outwith existing defined settlement boundaries or other land specifically allocated for development (as defined or allocated by this

Plan). This includes the coast (except the Developed Coast), Green Belt, Countryside Around Towns and Special Landscape Areas;

- All relevant Plan policies will be applied, including those in the Design Chapter.

Development in the Countryside

Rural diversification

- 5.5 Appropriate development in the countryside traditionally includes agriculture, horticulture, forestry and countryside recreation. New businesses may also seek to establish in East Lothian's countryside and coast, including tourism uses that could diversify the local economy. The Plan supports the principle of new built development in the countryside to accommodate an appropriate countryside use or other business, tourism or leisure development. Existing leisure, tourism or employment uses in countryside or coastal locations will not be expected to demonstrate an operational requirement to justify the principle of further development or expansion.
- 5.6 New build retail uses, such as farm shops in the countryside, may only be supported where there is an operational requirement for a countryside location, there is no opportunity to reuse an existing building, and where it would not be more appropriately located in a town centre.
- 5.7 Countryside or coastal sites may be needed to provide infrastructure for operational reasons, or may be appropriate to work minerals or for proposals related to renewable energy.

Policy DC1: Rural Diversification

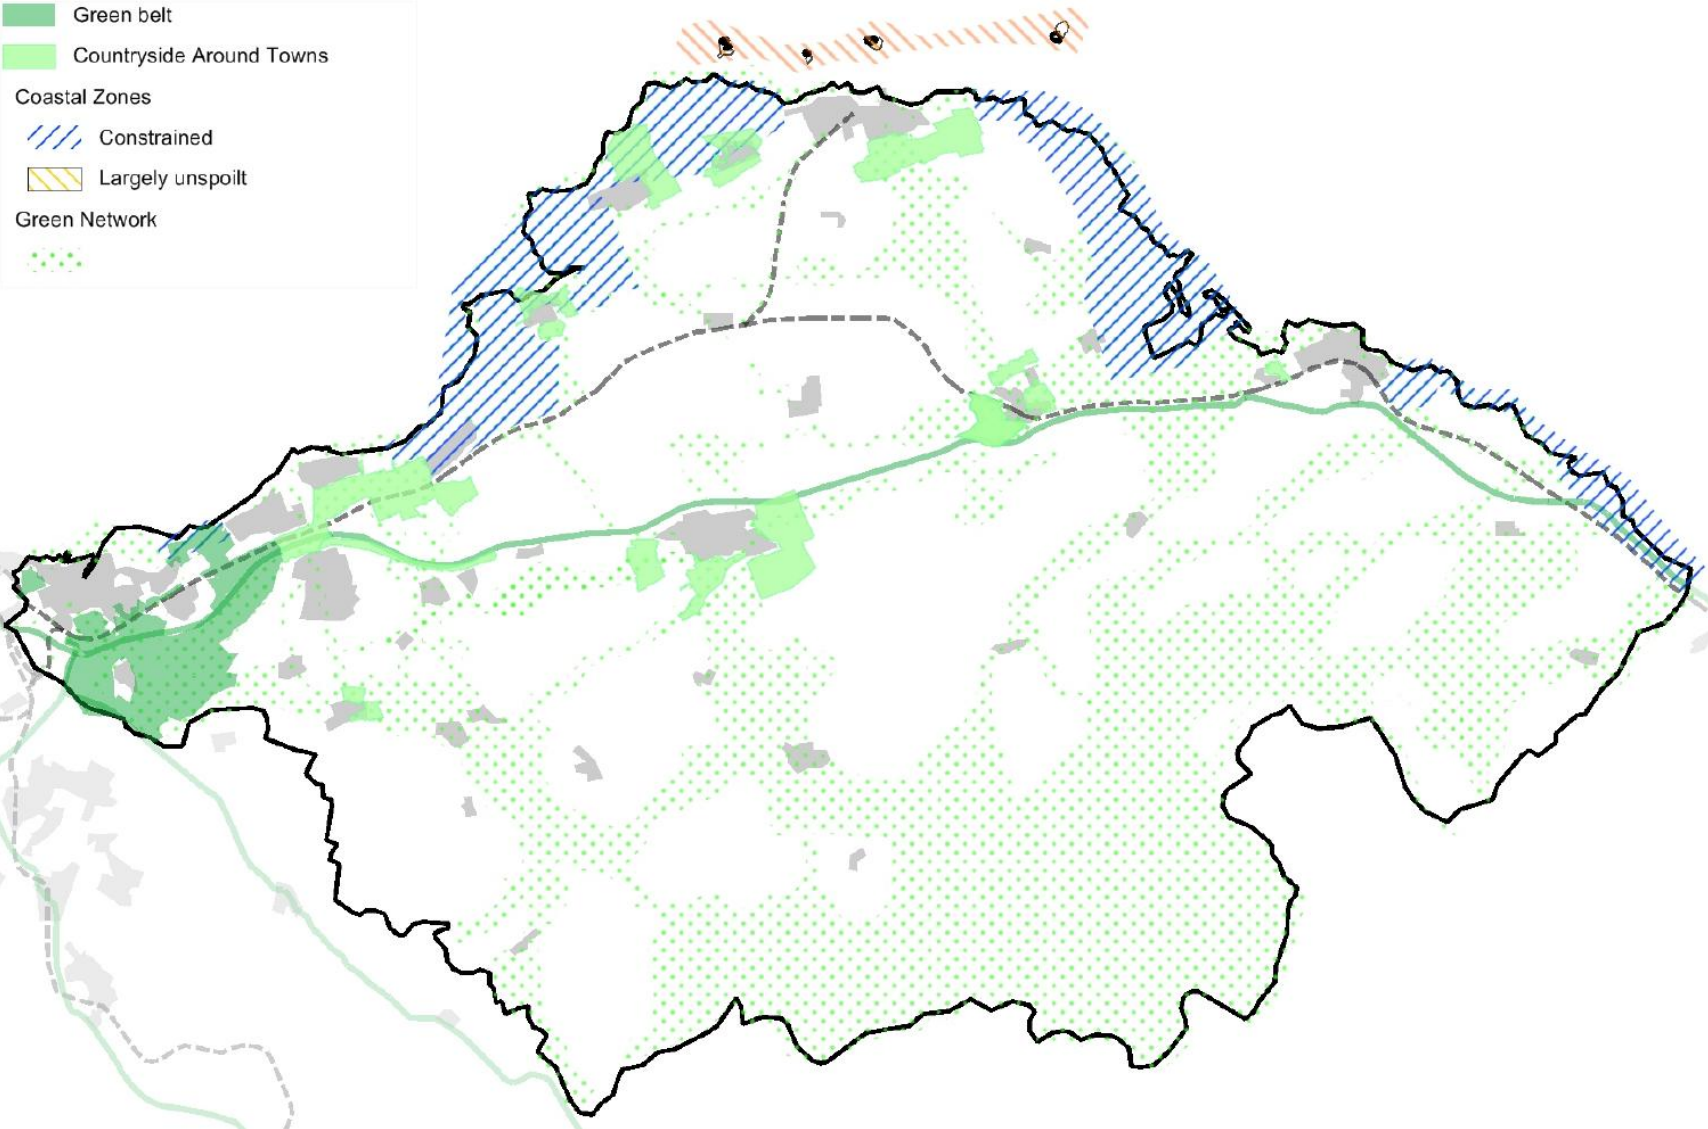

Development in the countryside, including changes of use or conversions of existing buildings, will be supported in principle where it is for:

- a) agriculture, horticulture, forestry, infrastructure or countryside recreation; or
- b) other businesses that have an operational requirement for a countryside location, including tourism and leisure uses.

Proposals for mineral extraction and renewable energy will be assessed against the other relevant policies of the Plan.

Any proposals for the restoration or conversion of vernacular buildings to accommodate uses supported in principle by this policy should be of an appropriate scale and character and designed in such a way that maintains or complements their layout and appearance.

Spatial Strategy Diagram 5: Countryside and Coast

Housing in the countryside

- 5.8 In general, East Lothian's countryside and coast is not an area that requires regeneration, renewal or action to address population decline. Few, if any, locations are more than an hour's drive time from Edinburgh or 30 minutes drive time from Musselburgh or Tranent, towns of over 10,000 people. As an accessible area where mobile demand for housing from Edinburgh will continue, it is important to protect against unsustainable growth in car-based commuting and the suburbanisation of the countryside. Most new housing development is therefore directed to towns and villages or planned extensions of these. However, as an exception to this general presumption against new housing in the countryside, the conversion of attractive rural buildings to housing may be supported.

Policy DC2: Conversion of rural buildings to housing

Conversion of appropriate buildings in the countryside to residential use will be supported where:

- (i) The existing building is worthy of retention by virtue of its architectural or historic character;
- (ii) The building is physically suitable for the proposed use and any extensions or alterations are compatible with and do not harm any significant architectural or historic features of the building and are in keeping with its size, form, scale, proportion, massing and architectural character; and
- (iii) The building stands substantially intact (normally to at least wallhead height) and requires no significant demolition. To be satisfied that the existing structure is suitable for the conversion without significant demolition the Council must be provided with credible evidence of the building's structural stability at the time of the planning application.

In the case of a change of use of agricultural buildings to housing, the change of use must involve the whole building group.

In the case of a farm steading conversion, a limited amount of new build may be acceptable where:

- a) it reinstates a part of the original steading group demolished or altered by later development alien to its character and appearance, where there is clear physical and/or historic evidence of the original form; or
- b) it is a logical extension to an existing part of the steading that would provide a completeness to the steading's overall composition that is in keeping with its scale, form and character.

In all cases, the external finishes used must be sympathetic to those of the existing buildings proposed for conversion.

- 5.9 As a further exception to the general presumption against new housing in the countryside, replacement of an existing permanent dwelling may be supported in some limited circumstances such as where a house has been significantly damaged by accidental fire, or where a dwelling is constructed in such a way as to be incapable of renovation or improvement. If the replacement dwelling would be better located on a different part of the same plot (e.g. for landscape reasons or ground conditions) the Council will require as a condition of any planning permission that the original dwelling will be demolished on completion of the replacement.

Policy DC3: Replacement dwellings in the countryside

Proposals for replacement dwellings in the countryside will be supported in principle where they would:

- (i) be a like for like replacement of a dwelling recently rendered uninhabitable by unforeseen circumstances, such as a demonstrable and accidental fire, provided there is compelling evidence that the loss of the original habitable dwelling was recent and that it benefited from lawful use as a dwelling immediately prior to the loss; or
- (ii) replace an existing dwelling with lawful use rights as such (not the plot of a previous, now demolished house) that the Council accepts that due to the construction of the building it is incapable of retention for habitation and that all reasonable efforts have been made to maintain the building.

Applicants must submit credible evidence at the time of the planning application to demonstrate compliance with this policy as relevant. Any replacement dwelling must be similar in size, scale and massing to the original and would be of an appropriate character for its location.

- 5.10 The Plan has a general presumption against new housing in the countryside, but exceptionally a new house may be justified on the basis of an operational requirement of a rural business. Appropriate evidence clearly demonstrating the need for a new dwelling on the particular site in association with the business will be required. This will include evidence that no suitable existing dwelling has been recently made unavailable for that purpose and that there is no existing building that could be converted to a house. Where a house is sought on the basis of an operational requirement in conjunction with a business that is not yet established (e.g. in association with a proposal that is consistent with criterion b of Policy DC1), a business case that supports the proposal will also be required to be submitted as part of the planning application. In the first instance, the Council will normally grant temporary planning permission for temporary accommodation. Permanent accommodation will only be permitted once the business has established and the Council is satisfied that it is viable and that permanent accommodation is justified. Housing permitted in these circumstances will be tied to the business for which it is justified.

5.11 Where there is no existing building worthy of conversion in the locality in line with policy DC2, as a further exception to the normal policy presumption against new housing in the countryside, the Plan also allows for small-scale affordable housing developments that would meet the needs of small and less accessible rural communities. In such communities, the cost of rural housing is often unaffordable to many who need to live or work in the countryside, and there are fewer housing opportunities in these localities. Such proposals must adjoin an existing small-scale settlement identified by this plan and be subordinate in scale to that settlement. To demonstrate that the new housing is justified, the registered affordable housing provider shall provide evidence that there is a clear need in the locality and ensure that the development can fulfil this need in perpetuity. Proposals must be for a very small number of homes.

Policy DC4: New build housing in the countryside

New build housing development will only be supported in the countryside where there is no existing house or no appropriate existing building suitable for conversion to a house is available in the locality and:

- (i) In the case of a single house, the Council is satisfied that it is a direct operational requirement of a viable agricultural, horticultural, forestry, countryside recreation or other business, leisure or tourism use supported in principle by policy DC1. The Council will obtain independent advice from an Agricultural and Rural Advisor on whether there is a direct operational requirement for an associated house; or
- (ii) In the case of other small scale housing proposals, it is for affordable housing and the registered affordable housing provider will ensure that the dwellings will remain affordable in perpetuity. Proposals should be very small scale and form a logical addition to an existing small-scale rural settlement identified by this plan.

Enabling housing development

5.12 The Council may exceptionally be willing to support an element of new build housing as enabling development to help deliver another form of development (other than for residential development and infrastructure) that is supported in principle in a countryside location under policy DC1, or where it would fund the restoration of a listed building or one that has recognised heritage value by inclusion on the national Buildings at Risk Register or other significant feature of the built or natural environment, the retention of which is desirable. Such an approach would only be supported if the wider benefits of the main proposal outweigh the normal policy presumption against new build housing in the countryside. Any such enabling development must be essential, the minimum necessary to achieve the primary use, and not a substitute for normal development funding, including

borrowing. Additionally, such proposals would not be expected to provide affordable housing for this reason.

Policy DC5: Housing as enabling development

Housing in the countryside may exceptionally be supported as enabling development where it will:

- a) enable a desirable primary use supported in principle by criterion b of Policy DC1 and the benefits of the primary use outweighs the normal presumption against new build housing in the countryside; or
- b) fund the restoration of a listed building or other building with recognised heritage value, or other significant feature of the built or natural environment, the retention of which is desirable.

Any enabling development must be on the same site as the main proposal.

In all cases, the benefits of the proposed development must outweigh the normal presumption against new build housing development in the countryside.

The Council will obtain independent advice on the extent of enabling development to ensure that it is the minimum necessary to achieve the primary use and it is not a substitute for normal development funding including borrowing.

Development in Coastal Areas

5.13 Scottish Planning Policy expects development plans to promote the developed coast as the focus for new developments requiring a coastal location. In East Lothian such areas are where settlements intersect with the coastline and these locations should continue to be the focus for most coastal economic and recreational activity on the coast.

5.14 Between coastal settlements there are generally undeveloped areas where new coastal development should generally be avoided. In such constrained areas new development may be acceptable in certain circumstances where there is an operational requirement for a coastal location, for example appropriate tourism proposals or infrastructure, including flood defences or on-shore development proposed in association with off-shore energy projects. The constrained coastline includes local variations. There are parts that are not intensively developed and parts that are remote. There will be an expectation that new development is well-related to parts of the constrained coastline where there is already some development. The character of more remote areas should be retained and new development in these locations should generally be avoided. The Forth islands and Bass Rock are parts of East

Lothian's coastline that are unspoiled and there will be a general presumption against development in those locations.

- 5.15 The three different types of coastal areas – developed, constrained and largely unspoilt – are defined on the Strategy Diagram 5. Development proposals in coastal locations will be assessed against the qualities of the coastal area and other relevant Plan policies for the location, including those on development in the countryside where relevant. Sections of the coastline also have significant international, national and local natural heritage assets. If a development proposal is likely to have a significant effect on a Natura 2000 or Ramsar site either individually or cumulatively with other projects (and is not directly connected to its nature conservation management) Appropriate Assessment will be required and information to allow this to be carried out must be provided if requested by the planning authority.

Policy DC6: Development in the Coastal Area

Development proposals in the coastal area will be assessed against the relevant qualities of the coastal area in addition to all other relevant Plan policies. Where it is proposed on the:

- Developed Coast it will be supported in principle if it complies with other relevant Plan policies;
- Constrained Coast it will only be supported if it requires to be directly adjacent to the coast and is in keeping with the character and appearance of the local area;
- Largely Unspoiled Coast it will only be supported if there is an established need for the development and a specific need for that particular coastal location.

If a development proposal is likely to have a significant effect on a Natura 2000 or Ramsar site either individually or cumulatively with other projects (and is not directly connected to its nature conservation management) Appropriate Assessment will be required.

The siting and design of new development must respect the qualities of the particular coastal location.

Special Rural Landscapes

- 5.16 Certain parts of East Lothian's landscape are of particular importance and merit a degree of enhanced protection. The following policies set out particular considerations that will apply in certain locations as defined on the Proposals Map or in Supplementary Guidance. In all cases, where the principle of particular types of development is supported, the Council expects the highest quality of siting, layout, landscape treatment and design to ensure that new development makes a positive contribution to the qualities of the area.

Green Belt

- 5.17 The green belt in the west of East Lothian is part of a wider Edinburgh Green Belt. Its purpose is to maintain the setting, character and identity of Edinburgh and its neighbouring towns, including Musselburgh, Wallyford and Whitecraig. The green belt can take a number of forms, including wedges, corridors and buffers between settlements. It will continue to have an important role in protecting the landscape setting of Musselburgh / Inveresk and the western edges of Prestonpans and Tranent and in ensuring that residents have access to open spaces and the countryside.
- 5.18 The Strategic Development Plan requires that the green belt is retained but recognises that its boundaries may require to be modified to accommodate the regional growth strategy. The LDP modifies green belt boundaries to allocate land for development to the south west of Musselburgh at Craighall, to the east of Musselburgh and around Wallyford, and north and south of Whitecraig. The development of the Green Network in association with the development of relevant sites will help to mitigate the impact of these green belt abstractions and also provide for enhanced access to the countryside for recreation.
- 5.19 To ensure that the benefits of the Green Belt are maintained new development is generally restricted to limited circumstances. Proposals will also be assessed against relevant countryside or coastal policies.

Policy DC7: Development in the Edinburgh Green Belt

New built development will only be permitted in the Edinburgh Green Belt where necessary for:

- agricultural, horticultural or forestry operations, including community woodlands;
- an extension or alteration to an existing building, or ancillary development within its curtilage;
- a national requirement or established need, if no other suitable site is available;
- a replacement house (supported under Policy DC3); or
- essential infrastructure.

Proposals should be of a size, scale and nature that do not harm green belt objectives or the character or appearance of the local area.

Changes of use will be acceptable in principle subject to other relevant Plan policies.

Countryside Around Towns

- 5.20 There are a number of areas beyond the Edinburgh Green Belt that are also subject to development pressure but should be retained as open or undeveloped to conserve the landscape setting, character or identity of towns and villages.
- 5.21 The remaining open or undeveloped areas of land between certain settlements in the west of East Lothian will have a key role in maintaining their separate identities. The introduction of the new settlement at Blindwells means land between it and Tranent and certain coastal settlements also merits protection from significant built development. There are community uses operating in the countryside here, and cultural heritage assets of national and more local importance, and the Plan should support development of these uses and allow the cultural heritage assets to be maintained or enhanced.
- 5.22 Land between Belhaven and West Barns also has a role in maintaining their separate identities. In other parts of East Lothian settlement coalescence is generally less of an issue but the character and identity of certain settlements could be compromised by development affecting their landscape setting. There is also scope to provide new, or extend or improve existing, active travel routes in Countryside Around Towns areas as part of the wider green network. Details of the particular importance of each designated area are set out in supplementary planning guidance on Countryside Around Towns.

Policy DC8: Countryside Around Towns

Development that would harm Countryside Around Towns objectives as defined in supplementary planning guidance will not be permitted. New built development within areas designated as Countryside Around Towns will be supported in principle only where:

- i) it is required to implement part of the green network strategy;
- ii) it is required for community uses;
- iii) it is required for rural business, tourism or leisure related use;
- iv) it is essential infrastructure that has a clear operational requirement for that particular location and there is no other suitable site available; or

Any new development must not harm the landscape setting of the countryside location and it is of a scale, size and form that would not harm the objectives for the countryside around towns designation.

Special Landscape Areas

- 5.23 The Council has assessed the East Lothian landscape in accordance with Guidance on Local Landscape Designations produced by Scottish Natural Heritage and Historic Environment Scotland. The Plan designates Special Landscape Areas and these are shown on the Proposals Map. Supplementary planning guidance on Special Landscape Areas identifies the boundaries of these areas, describes each Special Landscape Area and includes a Statement of Importance for each. Development should accord with this supplementary planning guidance where possible.

Policy DC9: Special Landscape Areas

Areas are designated as Special Landscape Areas as identified within supplementary planning guidance on Special Landscape Areas. Development within or affecting Special Landscape Areas will only be permitted where:

1. it accords with the Statement of Importance and does not harm the special character of the area; or
2. the public benefits of the development clearly outweigh any adverse impact and the development is designed, sited and landscaped to minimise such adverse impacts.

The Council will refer to the Statement of Importance of the relevant site in assessing planning applications.

Green Network

- 5.24 The Green Network seeks to integrate biodiversity, landscaping, active travel, flood mitigation, open space and climate change adaptation and other relevant interests. It will be made up of green spaces (parks, public spaces, woodland spaces etc) and blue spaces (rivers, streams wetlands and SUDS etc). Although the Green Network will not compensate for the loss of flood plains, it can be used for climate change adaptation and flood mitigation. It aims to maintain and improve quality of place, including in relation to the setting and identity of settlements, and address environmental inequalities, promote active travel and enhance health and well being. The development of the Green Network over time will help improve the quality of life in the area and improve connections for people and biodiversity.
- 5.25 East Lothian's Green Network extends within and between settlements and into the countryside and along the coast. Existing green network assets include protected natural heritage sites, active travel routes, beaches, parks, woodlands. The Council's Green Network Strategy is supplementary planning guidance to this plan and seeks to deliver new or improved green infrastructure, including as part of new development.

4.58 New development will provide on-site measures where appropriate. Development briefs have been prepared for development sites proposed by this plan to describe and illustrate how this is to be achieved. In addition to on-site measures, relevant development proposals will also be required make appropriate contributions towards Green Network measures in their local area as well as wider strategic measures. The Green Network strategy includes projects towards which such developer contributions will be sought. In accord with Policy DEL1, the type and scales of development that will normally be expected to contribute to this fund are as follows:

- Proposals of 5 or more dwellings, including affordable housing;
- Employment, retail, leisure or tourism proposals of 1,000m² gross floor space or larger;
- All 'major' development proposals.

5.26 Where new development is permitted that would adversely affect any existing element of the Green Network, alternative provision must be made. The Council will have regard to its Green Network Strategy when assessing planning applications. There may also be opportunities to introduce temporary greening of sites to contribute to the green network prior to development.

Policy DC10: The Green Network

All relevant development must contribute to the Green Network in accordance with the Council's Green Network Strategy as set out in supplementary planning guidance. This will include the provision of on and off site Green Network measures as identified in the Green Network Strategy, and where relevant as set out in a Development Brief.

Where loss or reduction in quality to any element of the Green Network is required to facilitate development, alternative provision to the satisfaction of the Council must be provided.

Roadside Advertisements

5.27 The display of advertisements in the countryside has the potential to harm its character and appearance, and it is therefore necessary to control such development. One of the main demands for signs in the countryside come from businesses located there which seek to advertise on the roadside. Businesses that have a roadside boundary are permitted advertisements inside or on the boundary, within prescribed limits, above which advertisement consent is required. On the roadside verge, the roads authority has control, and the legislation relating to advertisement consent is not applicable. In this situation, businesses that are a tourist attraction may be allowed a Scottish Tourist Board directional

sign, subject to satisfying the necessary criteria (Transport Scotland Trunk Road and Motorway Tourist Signposting Policy and Guidance: 2006, and SODD Circular 27/95). For signs in the countryside, the following policy will be applied.

Policy DC11: Roadside Advertisements

Consent for roadside advertisements in the countryside will only be granted if:

- 1) The sign, by virtue of its siting, size, and appearance, does not harm the amenity of the area; and
- 2) The sign is primarily directional, and does not advertise particular products or facilities; and
- 3) The premises to be signed are not clearly visible from a major road and cannot already be reasonably identified by means of an existing directional sign advising of the place name of the locality within which it is located; and
- 4) No more than one sign is proposed at the nearest junction of the public road and the access road to the premises; and
- 5) Road safety will not be compromised.

In the case of two or more neighbouring premises, a series of individual signs will not be permitted, and composite signs will be encouraged as an alternative, where appropriate.

OUR NATURAL & CULTURAL HERITAGE

Natural Heritage

Background

- 6.1 Protecting, conserving and, where appropriate, enhancing the natural heritage is an important aspect of sustainable development. The LDP has an important role in protecting sites designated for their biodiversity or geodiversity interest at international, national or local level, with the level of protection reflecting sites' relative importance. The Plan also ensures protected species and other natural heritage interests beyond designated sites are taken into account in planning decisions, including the potential for enhancement.
- 6.2 Where a development may have a negative impact on biodiversity or geodiversity, the 'mitigation hierarchy' must be followed, whereby *preventing* or *avoiding* the impact is considered in the first instance; if this is not possible *reducing* impacts can be considered, then finally *offsetting*. The 'precautionary principle' applies to European protected sites and means consent can only be given where it is demonstrated there will be no adverse effect on the integrity of the designated site.
- 6.3 Environmental assessments may be needed for some proposals. Assessment under the Habitats Regulations may be required where a proposal may affect a Natura 2000 site or Ramsar site. Other specialist studies may be required. To establish where there is a need for environmental assessment, applicants should seek early advice from the Council and any other relevant bodies. This will be particularly relevant where proposals would benefit from a co-ordinated assessment of any potential terrestrial and marine impacts.
- 6.4 Developers should also be aware that a planning permission does not over-ride the protection given to certain species under other legislation such as the Habitats Regulations 1994 and the Nature Conservation (Scotland) Act 2004 and that damage to protected species may be a criminal offence. Developers should therefore make early site investigations to establish whether any protected species may be present on a proposed development site

Biodiversity and Geodiversity

International Sites

- 6.5 At international level two main series of sites have been designated to protect biodiversity. Under the Ramsar Convention, sites are designated to protect wetlands of international

importance. The Natura 2000 series was designated at European level to protect Europe's most valuable and threatened species and habitats. The Natura 2000 series comprises Special Protection Areas (SPAs), which protect birds, and Special Areas of Conservation (SACs), which protect habitats and species. The network includes both terrestrial and marine protected sites. In policy terms Ramsar and Natura 2000 sites will be treated in the same way.

- 6.6 The Firth of Forth and Forth Islands are both designated SPAs, and the Firth of Forth is also a Ramsar site. Development may have the potential to directly or indirectly affect the conservation interests of these sites, for example through permanent habitat loss, disturbance from people or machinery, reduced water quality, lighting, or changes to coastal processes. In addition, some parts of the Lammermuir Hills within East Lothian drain into the River Tweed SAC and development could also affect this site, particularly through siltation impacting on water quality.
- 6.7 Some types of development could also have indirect impacts on a Natura 2000 site or Ramsar site outwith East Lothian if there is 'connectivity' with the site, i.e. a clear route for development to affect a species or habitat in another location. For example, the water or marine environment may act as a pathway for development-related impacts to affect locations distant from the development site. Wind turbine development could not only affect sites within East Lothian and the River Tweed SAC, but also SPAs in other local authority areas. For example, in Midlothian the interest of both Fala Flow and Gladhouse Reservoir SPAs is the pink footed goose, whose roosting and feeding sites in East Lothian also benefit from protection. Offshore, the Firth of Forth Banks Complex is a Nature Conservation Marine Protected Area (MPA) and also a candidate Marine Special Area of Conservation (mSAC), while the Outer Firth of Forth and St Andrews Bay Complex is a marine draft SPA and may become a proposed or confirmed SPA during the lifetime of the Plan.
- 6.8 If a development proposal is likely to have a significant effect on a Natura 2000 or Ramsar site either individually or cumulatively with other projects (and is not directly connected to its nature conservation management), the Council must carry out an Appropriate Assessment under the Habitats Regulations to establish the implications for site's conservation interest and whether there would be any adverse effect on the integrity of the Natura 2000 site. To allow the Council to make such an assessment, the commissioning of any studies to support it should be agreed with the Council at an early stage. Proposals unconnected with the conservation management of the Natura 2000 site that would have an adverse effect on the integrity of a Natura 2000 site or Ramsar can only be approved for reasons of over-riding public interest. Such proposals require to be referred to Scottish Ministers prior to issuing any planning permission, and may be called in by them for their determination.

Policy NH1: Protection of Internationally Designated Sites

Development proposals that are likely to have a significant effect on the integrity of a Natura 2000 site or Ramsar site (including proposals outwith the boundary of the designated site) will be subject to Appropriate Assessment under the Habitat Regulations 1994. If this assessment concludes that the proposed development would have an adverse effect or that the effect is uncertain, it will only be permitted where:

- a) It is directly connected with or necessary to the conservation management of a Natura 2000 site or Ramsar site; or
- b) there are imperative reasons of over-riding public interest and there are no alternative solutions; and
- c) compensatory measures are provided to ensure that the overall coherence of the Natura 2000 network is protected.

Candidate Natura 2000 sites will be treated as if they were already designated.

National Sites

- 6.9 At national level Sites of Special Scientific Interest (SSSIs) provide protection to areas of biological and geological value. There are 15 such sites in East Lothian. The Geological Conservation Review (GCR) additionally identified sites of geological importance and these sites will be treated in the same way as SSSIs. As SSSI's and GCR sites protect nationally important elements of the natural heritage, development proposals which would harm that interest should seek alternative solutions where possible. Where a proposal unavoidably harms the natural heritage interest, appropriate mitigation with the aim of conserving biodiversity or geodiversity interest overall should be provided.
- 6.10 Within these sites there may be features of biological or geological importance that are not part of the citation. Nevertheless they provide a level of ecological, geological and landscape context to the site. Impacts on these features will be considered under Policy NH3 and are considered to have greater significance because they form part of the designated site.

Policy NH2: Protection of Sites of Special Scientific Interest and Geological Conservation Review Sites

Development that would adversely affect a Site of Special Scientific Interest or Geological Conservation Review site will only be permitted where it can be demonstrated that:

- a) the objectives of designation and overall integrity of the site will not be compromised;

- b) any significant adverse effects on the qualities for which the area has been designated are clearly outweighed by social, economic or environmental benefits of national importance;
- c) there are no alternative solutions; and
- d) appropriate mitigation will be provided.

Where proposals affect non-notified features within a site, this will be considered against criteria in Policy NH3.

Local Nature Conservation Sites, Local Nature Reserves, and Country Parks

- 6.11 Local Biodiversity Sites are designated by this Plan. The new Local Biodiversity Sites, and the methodology and summary site statements for them are set out in supplementary planning guidance published alongside this Plan. The sites in the Geodiversity Audit by the British Geological Survey are also included in supplementary planning guidance; with some minor amendments these are designated as Local Geodiversity Sites. Together with the Local Biodiversity sites these are Local Nature Conservation Sites, which are shown on the Proposals Map.
- 6.12 In addition to these sites, other local designations that are of biodiversity value are Local Nature Reserves and country parks; the Council currently has one of each at Aberlady Bay and John Muir Country Park respectively. These areas are also of value for compatible recreation, which will be considered alongside their natural heritage value in the assessment of any planning applications. Proposals for development in these areas will also be assessed against the policy below.

Policy NH3: Protection of Local Sites and Areas

The following sites are designated as Local Nature Conservation Sites and are shown on the Proposals Map: Local Biodiversity Sites and Local Geodiversity Sites. Details of these sites are set out in supplementary planning guidance.

Development that would adversely affect the interest of a Local Nature Conservation Site, Local Nature Reserve or Country Park will only be permitted where it is demonstrated that any damage to the natural heritage interest or public enjoyment of the site is outweighed by the public benefits of the development to the local area and suitable mitigation will be secured.

Biodiversity and Geodiversity Interests, Including Protected Species

- 6.13 Biodiversity and geodiversity interests are not restricted to designated sites and the Council will seek to protect and enhance all biodiversity, including habits and species, and geodiversity features, whether designated or not, proportionate to their natural heritage

value. The Council has a duty under the Nature Conservation (Scotland) Act 2004 to further the conservation of biodiversity where consistent with the exercise of its functions. Certain species are protected by European and/or national legislation, such as bats, otters, and great crested newts; where development may affect them this will be a material planning consideration. Other species are of importance in the local context.

- 6.14 The East Lothian Biodiversity Action Plan (ELBAP) sets out the Council's aims for conserving biodiversity in the area, and this will be referred to in considering planning applications where relevant. New development should avoid detracting from the biodiversity value of its site or the surrounding area and the Council encourages enhancements. Particular regard will also be paid to the potential effect on European protected species, ELBAP priority habitats and losses of a significant portion of the East Lothian population of a species listed in the ELBAP. The Council will also consider impacts on areas of ancient woodland and groundwater-dependent terrestrial ecosystems.
- 6.15 Geodiversity can only be seen and appreciated where it is found, and features of interest should be incorporated into development design wherever possible. If this is not possible, recording of the geodiversity interest should be carried out prior to development. Where there is a significant geological feature within a site, provision of access to and interpretation of the feature appropriate to the scale of development may be required.
- 6.16 The design of developments should consider at an early stage impacts on protected species and how biodiversity and geodiversity can be incorporated in a positive way. This should be based on surveys where necessary to establish the significance of the natural heritage resource of the site and in its immediate surroundings. Consideration should extend to placemaking objectives, including built environment measures, landscaping, and opportunities for enjoying and learning about the natural environment. Habitat linkages within the site and to features outwith the site as well as the use of native species in landscape planting are particularly important. Advice is available from the Council and, where relevant, Scottish Natural Heritage (<http://www.snh.gov.uk/protecting-scotlands-nature/safeguarding-geodiversity/>) and Lothian and Borders Geoconservation.

Policy NH4: European Protected Species

Proposals that may have an impact on European protected species will only be permitted where:

- a) there are imperative reasons of overriding public interest or for public health and safety;
- b) there is no satisfactory alternative;
- c) favourable conservation status of the species can be maintained; and

- d) A species protection plan has been submitted, which is based on survey results and includes details of the status of European protected species on site and how possible adverse effects are to be mitigated.

Policy NH5: Biodiversity and Geodiversity Interests, including Nationally Protected Species

Developers must demonstrate, where relevant, how impacts on biodiversity and geodiversity have been addressed as part of their proposals. Sufficient supporting information should be submitted.

New development that would result in:

- a. an adverse impact to nationally protected species;
- b. an adverse impact to the biodiversity value of the development site or the surrounding area (for example through fragmentation or loss of habitat); or
- c. serious damage to or destruction of a significant geodiversity feature;

will only be permitted where the loss is clearly outweighed by the public benefit of the development and suitable mitigation has been proposed and will be secured.

Proposals should indicate how they have had regard to the mitigation hierarchy, the potential for incorporating biodiversity or geodiversity features within the site into the proposal in a positive way where appropriate, and for providing on-site or off-site enhancements. Where relevant, a species protection plan based on survey results must be submitted including details of the status of nationally protected species on site and how possible adverse effects will be mitigated.

Geodiversity Recording

- 6.17 Where it is not possible to retain a significant geodiversity feature in situ, it should be recorded prior to development. Where such an exposure will be lost and it is practicable to provide an alternative, this may be required. For example, any mineral workings could include alternative exposures on restoration of the site.

Policy NH6: Geodiversity Recording and Alternative Exposures

Where physical preservation of a significant geodiversity features cannot reasonably be achieved, the recording of exposures, and submission of the record to the National Records Archive and East Lothian Council, will normally be required. The developer must also demonstrate that they have sought and, where practicable, will provide alternative exposures.

Soil Quality

- 6.18 East Lothian's soils provide many ecosystems services, not least for food production and forestry, which depend on their sustainable use. Soils have a role in absorbing contaminants, storing carbon, retaining water and reducing its overland flow. They are also a source of minerals and contain varied biodiversity. Pressures on soils include climate change and loss of soil organic matter, as well as threats related to development such as soil sealing and changes to hydrology. Disturbance of carbon rich soils, including through development, can lead to the release of CO₂, adding to climate change risk.
- 6.19 Particularly sensitive soil types are prime agricultural land and carbon rich and rare soils. Prime agricultural land is the most versatile land for food production, and is a non-renewable resource. The Council aims to reduce adverse impacts on soils, avoid where possible development on prime agricultural land, and consider climate changes impacts of developing certain soil types.

Policy NH7: Protecting Soils

Development on prime quality agricultural land or rare or carbon rich soils, such as peat, will not be permitted unless:

- It is to implement a proposal of this plan, or
- It is necessary to meet an established need and no other suitable site is available; or
- It is for an appropriate development in the countryside, including that which is directly linked to a rural business or an existing house; and
- The layout, design and construction methods of development minimises the amount of such land that is affected, taking into account the design policies of the plan.

Proposals for renewable energy generation or mineral extraction on prime quality agricultural land may also be acceptable where provision is made for restoration of the land to its former status and if soil will be reused where feasible.

In the case of carbon rich soils, in order that the Council may assess the merits of the proposal, applicants must demonstrate the effect it would have on CO₂ emissions as a result of its construction and where relevant operation.

Trees and Woodland

- 6.20 Trees can improve the quality of the environment and provide a range of benefits, including contributing to green network objectives. They often contribute significantly to the character and amenity of an area, are both a setting and resource for recreation, and are valuable for biodiversity. With a changing climate, trees may become more important to regulate temperatures in towns and provide shade, as well as having an important role in mitigation of climate change. Significant trees may have particular biodiversity, landscape and cultural value, including trees subject to Tree Preservation Orders, trees in Conservation Areas or veteran trees, and these should be retained where possible and public access encouraged.
- 6.21 Ancient woodland is an irreplaceable resource and should be protected from adverse effects arising from development. The Scottish Government's Control of Woodland Removal policy sets out national policy on woodland removal and replacement planting. Its aims include support for the maintenance and expansion of forest cover in Scotland and achieving an appropriate balance between forested and non-forested land. It contains a strong presumption in favour of protecting Scotland's woodland resources. East Lothian has relatively sparse tree cover, increasing the importance of protecting existing trees, and increasing woodland cover where possible. Developers are encouraged to engage early with Forestry Commission Scotland to investigate opportunities that could be facilitated through its Forestry Grant Scheme.
- 6.22 Some development sites contain groups of trees, for example shelter belts, or relict hedgerows. If these are incorporated into private gardens, they tend to suffer from varied pressures and maintenance, and the overall appearance and value as a linear feature for biodiversity and landscaping can be reduced. Wherever possible, such features should be integrated into areas of public open space, with access for maintenance and suitable space for replacement planting, and developments should avoid backing onto or enclosing them.
- 6.23 Trees on and adjacent to development sites should be retained where possible, and protected in line with British Standard 5837. Trees adjacent to development sites can be affected by changes in drainage patterns or damage to their root systems. Impacts on trees outwith a development site are also a consideration, including for development design. The Council will use planning conditions to protect any tree that makes a significant contribution to the setting and amenity of an area. Work on trees should be carried out in accordance with relevant British Standards 3998. Where the tree is located on a site proposed for development, ensuring that development and any works to the trees or trees are carried out appropriately will be a condition of planning permission.
- 6.24 The aim of policy on trees is to give protection to trees and woodland, in fulfilment of the Council's biodiversity duty and as an important part of promoting sustainable development.

Policy NH8: Trees and Development

There is a strong presumption in favour of protecting East Lothian's woodland resources. Development affecting trees, groups of trees or areas of woodland will only be permitted where:

- a. any tree, group of trees or woodland that makes a significant positive contribution to the setting, amenity of the area has been incorporated into the development through design and layout, and wherever possible such trees and hedges should be incorporated into public open space and not into private gardens or areas; or
- b. (i) in the case of woodland, its loss is essential to facilitate development that would achieve significant and clearly defined additional public benefits in line with the Scottish Governments Policy on Control of Woodland Removal; in particular the loss of Ancient Woodland will not be supported; or (ii) in the case of individual trees or groups of trees, their loss is essential to facilitate development that would contribute more to the good planning of the area than would retaining the trees or group of trees.

Development (including extensions to buildings) must conform to British Standard 5837:2012 Guide for Trees in Relation to Design, Demolition and Construction, or any subsequent revisions.

Protecting and Enhancing the Water Environment

- 6.25 The second River Basin Management Plan 2015-2021 will be published during 2015. The plans' main objective is to achieve good ecological status of the water environment. The term 'water environment' encompasses watercourses, wetlands, lochs, coastal, estuarine and ground water. 'Ecological status' is a combined measure of the plants and animals present, the quantity of water available to sustain species, the physical structure of the waterbody which provides habitat and the chemical water quality. Additional objectives apply in certain protected areas, for example in relation to designated bathing waters and drinking water supply. RBMP2 will set out key pressures, objectives and measures for the water environment and will replace the first plan when it is published.
- 6.26 The planning regime is a key tool assisting the delivery of River Basin Management Plans (RBMP), protecting and restoring the water environment through influencing developments. This will help increase the environment's capacity to cope with and support future developments, for example through the protection of existing flood plains or wetlands and the use of Sustainable Drainage Systems (SuDS).

Advice Box 6: Water Environment

To ensure that a proposed development protects and enhances the water environment, the following principles should be observed:

- Developments should be connected to the public sewer where possible (rather than private treatment systems) and should be capable of being served by an adequate water supply.
- Buffer strips should be provided between development and waterbodies both for maintenance and for protecting and enhancing water and habitat quality.
- There will be a presumption against unnecessary engineering activities in the water environment.
- Where development presents an opportunity for morphological improvements (for example, the removal of fish barriers) these will be encouraged, subject to flood risk assessments.
- Water conservation measures are encouraged in all developments in order to reduce the impact of new development in terms of water supply, and to promote climate change adaptation. Such measures could include rainwater collection, 'grey' water recycling, and the use of low or dual flush toilets, spray taps, supply restrictor valves in water systems, and water efficient heating and cooling systems.

Policy NH9: Water Environment

Where relevant, new development should protect and, where appropriate, enhance the water environment, in line with the Water Framework Directive 2000 (WFD) and the Water Environment and Water Services (Scotland) Act 2003 (WEWS).

Development proposals that would have a detrimental impact on the water environment will not be supported.

Sustainable Drainage Systems (SuDS)

- 6.27 Sustainable Drainage Systems (SuDS) return excess surface water to the water cycle with minimal adverse impact on people and the environment. SuDS contribute to alleviation of flood risk and reduce discharge of diffuse pollutants through a range of measures aimed at managing water run-off from a site. SuDS manage surface water run-off by treating it as near to source as possible, slowing down the rate of water run-off, and treating water naturally and releasing good quality water to watercourses or groundwater.
- 6.28 The Water Environment (Controlled Activities) (Scotland) Regulations 2011 (as amended) make SuDS a legal requirement for new development, as well as requiring that surface water discharges must not result in pollution of the water environment. The only exceptions to

this legal requirement are proposals for (i) single dwellings and (ii) direct discharges to coastal waters but only where there is no or a low risk to designated bathing sites and identified Shellfish Waters. While the regulations make SuDS a legal requirement, their location, design and type are planning issues. SuDS should be considered at the outset of project design in order that the benefits to the creation of green networks, flood risk management, water quality, amenity, biodiversity, climate change adaptation and economic gain are maximised. No additional land take is required for certain types of SuDS such as green roofs and permeable paving, but other forms of SUDS may require significant areas of land. Sufficient space for SuDS must be safeguarded in site layouts and appropriate long-term maintenance arrangements should be put in place.

- 6.29 SuDS should be designed in accordance with the CIRIA SUDS Manual (C697), the current edition of Sewers for Scotland Manual where the scheme is to be adopted by Scottish Water, and the SUDS for Roads manual where the proposals include roads, or any subsequent revisions of these documents. SuDS should have a neutral or better effect on the risk of flooding both on and off the site, taking account of rain falling on the site and run-off from adjacent areas. A developed site must maintain its greenfield surface water conveyance and surface water storage capacity (or improved storage capacity) over a range of rainfall events including the 1 in 30 year event and the 1 in 200 year event. This manages flood risk to the site itself, avoids increasing flood risk to adjacent and downstream sites. If surface water storage capacity is increased compared to Greenfield values then this can help reduce flood risk in adjacent areas, which may be very important in flood prone areas. Regard should be had to SEPA surface water flood maps and flow paths and landscaping should be designed accordingly to ensure there is no increase in flood risk to others.
- 6.30 Each individual type of SuDS feature, such as a filter drain, detention basin, permeable paving or swale, provides one level of treatment. For example, surface water treated by permeable paving then in turn by a detention basin, i.e. runoff passing through both features in series (not in parallel), would be classed as receiving two levels of treatment, whereas surface water treated by two detention basins would be classed as receiving one level of treatment. One level of treatment should normally be source control such as the use of permeable paving. The following levels of treatment represent best practice and for mixed use developments the level of treatment required will be determined by the use with the highest sensitivity within the development.

Advice Box 7: Sustainable Urban Drainage Systems

- Residential developments of up to 49 houses and retail/commercial/business parks with car parks of up to 49 spaces should provide one level of treatment for all hardstanding areas including roads. This first level of SUDS should be source control.
- Residential developments of 50 or more houses and retail/ commercial/ business parks with car parks of 50 or more spaces should provide two levels of treatment for all hardstanding areas including roads. An exception is run-off from roofs, which would need only one level of treatment. The second level of treatment should be a basin or pond designed in accordance with Sewers for Scotland Second Edition. Please also refer to point e) below.
- Industrial developments should provide three levels of treatment for hard standing areas and two levels of treatment for roads. An exception is run-off from roofs, which would need only one level of treatment. The second level of treatment should be a basin or pond designed in accordance with Sewers for Scotland Second Edition. Please also refer to point e) below.
- All roads schemes should typically provide two levels of treatment, except for small scale developments as detailed in point a) above. For technical guidance on SuDS techniques and treatment for roads please refer to the SUDS for Roads manual.
- For all developments, run-off from areas subject to particularly high pollution risk (e.g. yard areas, service bays, fuelling areas, pressure washing areas, oil or chemical storage, handling and delivery areas) should be i) minimised and ii) directed to the foul sewer. Where run-off from high risk areas cannot be directed to the foul sewer SEPA may be able to provide further site specific advice on what would be the best environmental solution.

Policy NH10: Sustainable Drainage Systems

All development proposals must demonstrate that appropriate provision for Sustainable Drainage Systems (SuDS) has been made at the time of submitting a planning application, except for single dwellings or developments in coastal locations that discharge directly to coastal waters where there is no or a low risk to designated bathing sites and identified Shellfish Waters. Sufficient space for proposed SuDS provision, including the level and type of treatment appropriate to the scheme of proposed development, must be safeguarded in site layouts. Provision must also be made for appropriate long-term maintenance arrangements to the satisfaction of the Council.

A drainage assessment may also be required to show the impact of a 1 in 200-year rainstorm event. SuDS schemes should be designed with an allowance for climate change.

Proposals must also demonstrate how SuDS will be used to promote wider benefits such as place-making, green networks and biodiversity enhancement.

Flood Risk

6.31 The Flood Risk Management (Scotland) Act 2009 places responsibilities on local authorities to reduce overall flood risk and promote sustainable flood risk management. The Council promotes a precautionary approach to flood risk from all sources through avoidance as a first principle, working towards sustainable flood management. Flooding can occur from pluvial (rainfall), fluvial (watercourses), coastal, drainage and ground water sources and from infrastructure failure, or from a combination of these sources.

Advice Box 8: Flood Risk

Scottish Environment Protection Agency (SEPA) publishes flood mapping, and Scottish Planning Policy sets out a detailed flood risk framework to guide development. Areas where the annual probability of coastal or watercourse flooding is less than 0.1% are classed as 'little or no risk' areas and are considered to be unconstrained. Areas where the annual probability is between 0.1% and 0.5% are classed as 'low to medium risk' areas and are likely to be suitable for most development apart from civil infrastructure. Where civil infrastructure must be located in these areas or is being substantially extended, it should be designed to be capable of remaining operational and accessible during extreme flood events. Flood risk assessments may be required for essential infrastructure and the most vulnerable uses, such as residential institutions, hospitals and educational establishments.

Development should generally be avoided in areas of greater than 0.5% annual probability of coastal or watercourse flooding ('medium to high risk' areas) but the following uses may be appropriate:

- residential, institutional, commercial and industrial development within built-up areas provided flood protection measures to the appropriate standard already exist and are maintained, are under construction, or are a planned measure in a current flood risk management plan;
- essential infrastructure within built-up areas, designed and constructed to remain operational during floods and not impede water flow;
- some recreational, sport, amenity and nature conservation uses, provided appropriate evacuation procedures are in place; and
- job-related accommodation, e.g. for caretakers or operational staff.

Medium to high risk areas are generally unsuitable for:

- civil infrastructure and the most vulnerable uses;

- additional development in undeveloped and sparsely developed areas, unless a location is essential for operational reasons, e.g. for navigation and water-based recreation, agriculture, transport or utilities infrastructure (which should be designed and constructed to be operational during floods and not impede water flow), and an alternative, lower risk location is not available; and
- new caravan and camping sites.

6.32 A precautionary approach should be taken to proposed development behind any flood prevention scheme, as they are temporary in nature, have a finite design life and there is a residual risk from failure, potential climate change impacts. Redevelopment of brownfield sites within built up areas can provide an opportunity to reduce overall flood risk through a reduction in the vulnerability of the use, numbers of properties and improved design. Where built development is permitted in areas of flood risk, measures to protect against or manage flood risk and any loss of flood storage capacity will be required to achieve a neutral or better outcome. Brownfield redevelopment within the floodplain will only be permitted where this does not materially increase the probability of onsite or offsite flooding. Water-resistant materials and construction should be used as appropriate.

Policy NH11: Flood Risk

Development that would be at unacceptable risk of flooding will not be permitted. New development within areas of medium to high risk of coastal or watercourse flooding (with greater than 0.5% annual probability of flooding) should generally be avoided in accordance with the provisions set out in Advice Box 8.

All relevant development proposals will be assessed based on the probability of a flood affecting the site and the nature and vulnerability of the proposed use, taking into account the following:

- a) the characteristics of the site and any existing or previous development on it;
- b) the design and use of the proposed development, including use of water resistant materials and construction;
- c) the size of the area likely to flood;
- d) depth of flood water, likely flow rate and path, and rate of rise and duration;
- e) the vulnerability and risk of wave action for coastal sites;
- f) committed and existing flood protection methods: extent, standard and maintenance regime;
- g) the effects of climate change, including an appropriate allowance for freeboard;
- h) surface water run-off from adjoining land;
- i) culverted watercourses, drains and field drainage;
- j) cumulative effects, especially the loss of storage capacity;

- k) cross-boundary effects and the need for consultation with adjacent authorities;
- l) effects of flood on access including by emergency services; and
- m) effects of flood on proposed open spaces including gardens.

Flood Risk Assessments will normally be required for proposals within the medium to high risk category of flood risk. They may also be required in the low to medium category in certain circumstances, for example at the upper end of the probability range or for essential infrastructure and the most vulnerable uses.

Development proposals will not be supported if they would increase the probability of flooding elsewhere. Piecemeal reduction of the functional floodplain will be resisted given the cumulative effects of reducing storage capacity.

Areas of land that contribute to sustainable flood management, or have the potential to do so, will also be safeguarded from development. These areas will include locations where the Council will promote flood defences following the output of its Flood Risk Management Strategy.

Air Quality

- 6.33 Air quality is an important element in sustainable placemaking, contributing to health and well-being, as well as environmental protection. The main source of air pollution in East Lothian is emissions from road traffic. An Air Quality Management Area (AQMA) was declared in Musselburgh High Street in November 2013 due to annual mean levels of Nitrogen Dioxide resulting from road traffic emissions; an Action Plan is currently being prepared. Air quality continues to be monitored at other locations, including Tranent High Street, though currently meets National Air Quality Standards in these other locations.
- 6.34 The Council is preparing an Air Quality Management Plan for the area, to set out short and longer term measures for improving air quality, likely including improvements to the bus fleet and the relocation of bus stops. This will be concluded in association with the spatial strategy and will take into account the secondary effects of proposed LDP sites, such as increased traffic flow and emissions, and identifies strategic air quality mitigation measures.
- 6.35 The package of measures developed by the Council to mitigate the cumulative impact of the LDP's development strategy on air quality at Musselburgh and Tranent is based on transport modelling work and assessment of the likely impact on air quality of traffic from new development allocations. Developers of major development sites in these areas will be expected to make appropriate and proportionate financial contributions towards these mitigation measures. This requirement will apply to allocated sites and also to any relevant windfall or other unplanned developments.

6.36 It is important that new development and associated road traffic does not exacerbate air quality issues at the existing AQMA or lead to deterioration in air quality at other locations that would breach National Air Quality Standards. Air Quality Assessments will be required for certain types of development. The need for assessment will be confirmed on a case-by-case basis. Applicants are encouraged to contact the Council's Environmental Protection Service at an early stage to confirm whether an Air Quality Assessment will be needed. Where such an assessment indicates that air quality is likely to be an issue, there will be a need for mitigation.

6.37 Additional air quality mitigation measures can also be incorporated within developments, for example using green infrastructure (particularly trees) to absorb pollutants, or providing infrastructure to support modes of transport with low impact on air quality (e.g. electric vehicle charging points).

Policy NH12: Air Quality

Impacts on air quality will be taken into account in assessing development proposals, particularly within and close to any Air Quality Management Area (AQMA). An Air Quality Assessment may be required for developments that are within an AQMA or where the proposed development may cause or exacerbate a breach of National Air Quality Standards.

Development proposals that would result in either a breach of National Air Quality Standards or a significant increase in concentrations of air pollution within an existing AQMA will not be supported unless appropriate mitigation measures can be put in place. Financial contributions to strategic air quality mitigation measures will be necessary in these circumstances.

Cultural Heritage

Background

6.38 East Lothian is rich in cultural heritage, which gives the area a strong identity and appeal to residents and visitors alike. This includes scheduled monuments, listed buildings, conservation areas, designed landscapes, battlefields and archaeological sites, as well as the context in which these features sit and the patterns of past use in the landscape and in settlements. The Council seeks to protect, conserve and where appropriate enhance these historic assets for future generations to enjoy while at the same time permitting beneficial development.

Development Affecting Listed Buildings

- 6.39 East Lothian contains around 2,700 properties and structures that are listed either individually or as part of a group. Each is classified as category 'A', 'B' or 'C' according to its relative importance. Listed building consent is required for any works or alterations that affect the character of a listed building, including the interior of the building and the removal of any object or structure fixed to it, such as plasterwork or a chimneypiece. Planning permission will also normally be required for external (but not internal) works.
- 6.40 Successful work to listed buildings is as a result of a full understanding of the historic asset, its special interest and character. Proposed alterations or extensions to listed buildings should ensure that the value of the building is not lost or its character undermined by insensitive changes. They should be complementary and of a high quality, both in design and use of materials. Planning decisions will be taken in accordance with the advice contained in national historic environment policies and guidance.
- 6.41 No listed building should be lost unless it has been demonstrated beyond reasonable doubt that every effort has been made to find practical ways of keeping it. Scottish Historic Environment Policy outlines the tests against which proposed demolition of a listed building will be assessed.
- 6.42 The setting of a listed building can be affected by new development proposed within its curtilage, adjacent to it or visible from it. Development proposals should not interrupt key views of, from or to a listed building and should ensure that the presence of new development does not dominate or detract from the listed building in a way that affects understanding and appreciation of it.

- 6.43 Historic Environment Scotland will be consulted on planning applications that would affect a category A listed building or its setting, and on applications for listed building consent for works to category A and B listed buildings.

Policy CH1: Listed Buildings

Internal or external alterations or extensions to listed buildings will only be permitted where they do not harm the architectural or historic character of the building.

The demolition of a listed building will not be permitted unless the building is no longer of special interest, is incapable of repair or there are overriding environmental or economic reasons, and it must be satisfactorily demonstrated that every effort has been made to continue the present use or to find a suitable new use.

New development that harms the setting of a listed building will not be permitted.

Development Affecting Conservation Areas

- 6.44 Conservation Area designation is used to identify areas of special architectural or historic interest. Planning decisions must ensure that the character or appearance of a Conservation Area is preserved or enhanced. There are currently 30 designated Conservation Areas in East Lothian and each has its own distinctive character.
- 6.45 Supplementary planning guidance has been published with this LDP that contains Conservation Area Character Statements for 29 Conservation Areas and a more comprehensive Conservation Area Character Appraisal for Inveresk Conservation Area. The guidance will be a material consideration in planning decisions. In due course Character Statements will be replaced by more comprehensive Conservation Area Character Appraisals and Management Plans. The guidance also expands on the circumstances in which proposals for external wall treatment, alterations to shop fronts, external security, and advertisements will be supported within conservation areas. It also allows for reduced parking standards where positive townscape benefits can be demonstrated. These policies will also be material considerations in planning decisions. Proposed work affecting trees within Conservations Areas also requires the prior approval of the Council.
- 6.46 Design Statements can be used to describe and illustrate the design principles and design concepts of development proposals, including how these have been informed by relevant Conservation Area character statements or appraisals, and how the proposal would preserve or enhance the character or appearance of the Conservation Area. The circumstances where such statements will be required are set out in the Design chapter of this plan. Brief statements would be useful even for minor developments.

Policy CH2: Development Affecting Conservation Areas

All development proposals within or affecting a Conservation Area or its setting must be located and designed to preserve or enhance the special architectural or historic character or appearance of the Conservation Area. Proposals for new development should accord with the size, proportions, orientation, alignment, density, materials, and boundary treatment of nearby buildings and public and private spaces. Parking requirements of new developments must accord with the Council's adopted parking standards unless it can be demonstrated that a reduced level of parking (which in exceptional circumstances could be no parking provision) will achieve positive townscape benefits without compromising road safety.

The Council has set out in supplementary planning guidance more detailed policies on the circumstances in which it would support proposals for alterations to shop fronts, external security, external wall treatment and the display or installation of advertisements in Conservation Areas.

Demolition of Unlisted Buildings

- 6.47 Demolition of an unlisted building within a Conservation Area requires Conservation Area Consent. Such buildings often make a positive contribution to the area and there is a presumption to retain them. Proposals will be handled in a similar manner to proposals for demolition of a listed building. Any replacement building should preserve or enhance the character or appearance of the area, making reference to the relevant character statement/appraisal. Historic Environment Scotland will be consulted on proposals to demolish unlisted buildings in a Conservation Area.

Policy CH3: Demolition of an Unlisted Building in a Conservation Area

Proposals for Conservation Area Consent will be supported provided that there are appropriate proposals for redevelopment or intermediate treatment and:

- (i) the building to be demolished is incapable of reasonably beneficial use by virtue of its location, physical form or state of disrepair;
- (ii) the structural condition of the building is such that it cannot be adapted to accommodate alterations or extensions without material loss to its character; or
- (iii) the building does not make a contribution to the character or appearance of the conservation area and its removal or replacement would not adversely affect the character of the conservation area or it would facilitate positive townscape benefits.

Proposals for redevelopment or intermediate treatment must preserve or enhance the character or appearance of the conservation area. Demolition will not be allowed to proceed until acceptable alternative treatment of the site has been approved and a contract for the

replacement development or for an alternative means of treating the cleared site has been agreed.

In the case of an emergency, proposal for redevelopment or intermediate treatment may not be required.

Development Affecting Scheduled Monuments and Archaeological Sites

- 6.48 Scheduled Monuments are sites or structures of national importance scheduled by Historic Environment Scotland for legal protection. Scheduled Monument Consent is required from HES for any work affecting them, including repairs. Their setting is often very important to both the understanding of and the appearance of the monument. There are around 295 Scheduled Monuments in East Lothian, including well-known landmarks such as Traprain and North Berwick Laws.
- 6.49 The vast majority of archaeological sites within East Lothian are not scheduled and have no statutory protection at national level but are nevertheless of regional or local importance. The East Lothian Historic Environment Record lists these as 'archaeological sites' and contains approximately 8,000 entries. All sites and monuments, whether scheduled or not, are fragile and irreplaceable and they are a material consideration in the planning process.
- 6.50 The preservation in situ of important archaeological remains will always be preferred. Where development is proposed within areas of archaeological potential the developer must commission and make available to the Planning Authority, an archaeological assessment as part of any planning proposals. If significant archaeological remains are uncovered, the developer is encouraged to make provision for public accessibility and community involvement, e.g. through local media involvement, school visits, talks, open days, or exhibitions.

Policy CH4: Scheduled Monuments and Archaeological Sites

Where a proposed development might affect any Scheduled Monument or archaeological site (of known or suspected archaeological interest), the developer must undertake and make available to the planning authority a professional archaeological assessment and, if necessary, a field evaluation.

Development that adversely impacts on a scheduled monument, or its setting, will not be permitted.

Development that would harm a site of regional or local archaeological interest, or its setting, will only be permitted in exceptional circumstances, where the Council accepts that archaeological

advice that the significance of the remains is not sufficient to justify their physical preservation in situ when weighed against other material considerations (including the benefits of the proposed development). In such situations, the developer must make proper provision for the excavation, recording and analysis of the archaeological remains in advance of the commencement of development, the results of which must be reported and any subsequent post-excavation work undertaken should also be reported and, if warranted, published. Appropriate conditions may be applied to any planning permission to achieve this.

Where it is feasible within a proposed development to accommodate, preserve or enhance a Scheduled Monument or archaeological remains, interpretation and integration of these features and where appropriate, public access, will be expected.

Development Affecting a Nationally Important Historic Battlefield

- 6.51 The Inventory of Historic Battlefields is a list of nationally important battlefields designated by Historic Environment Scotland for their association with key historical events or figures, for the physical remains and/or archaeological potential they contain, or for their landscape context. Designated areas associated with battlefields can be extensive. There are currently four battlefields in East Lothian included in the Inventory of Historic Battlefields: Battle of Pinkie Cleugh (1547), Battle of Prestonpans (1745), Battle of Dunbar I (1296), and Battle of Dunbar II (1650). An Overview and Statement of Significance for each site is published by Historic Environment Scotland.
- 6.52 The effect of proposed development on the historical and archaeological significance of designated battlefield areas is a material planning consideration. Development should not adversely impact on the archaeological resource or the landscape context, including key views to from or within the battlefield. The cumulative effect of new development in addition to past or current developments should not adversely impact on the battlefield. Historic Environment Scotland will be consulted on development proposals within an Inventory Battlefield site, other than proposals for householder development.
- 6.53 East Lothian also has other battlefields that are of regional or local significance that are not included on the national Inventory. These will be treated as archaeological sites and assessed under Policy CH4.

Policy CH5: Battlefields

Development within a site listed in the Inventory of Historic Battlefields will not be permitted where it would have a significant adverse affect on the key features of the battlefield, including its key landscape characteristics and special qualities, unless it can be demonstrated that the overall integrity and character of the battlefield area will not be compromised. Any new development supported in such areas must provide appropriate mitigation that conserves or enhances the key

features of the battlefield, including through siting, scale, design and landscape treatment and, where relevant, contributes to the understanding of the battle and historic assets, particularly with respect to any archaeological deposits found in situ (See Policy CH4).

Development Affecting Gardens and Designed Landscapes

- 6.54 Gardens and Designed Landscapes make a significant contribution to East Lothian's historic environment and landscape. There are currently 27 gardens and designed landscapes in East Lothian that are of national importance and are included in Historic Environment Scotland's National Inventory of Gardens and Designed Landscapes. There are also many more gardens and designed landscapes of local or regional importance that are identified on East Lothian's Historic Environment Record; the assessment of these is an ongoing process.
- 6.55 Scottish Government policy requires that gardens and designed landscapes of national, regional or local importance are protected and, where appropriate, enhanced. They can have different qualities and are assessed under the following value-based criteria, although do not have to be of value under all of them:
- Value as an individual work of art
 - Historic value
 - Horticultural, arboricultural, silvicultural value
 - Architectural value
 - Scenic value
 - Nature conservation value
 - Archaeological value
- 6.56 Impacts of development proposals on gardens and designed landscapes will be a material planning consideration. Planning applications that may affect a garden or designed landscape on the National Inventory will be referred to Historic Environment Scotland for its comments.

Policy CH6: Gardens and Designed Landscapes

Development that would significantly harm the elements justifying designation of sites of national importance listed in the Inventory of Gardens and Designed Landscapes, or sites of local or regional importance included in historic gardens and designed landscape records, will not be permitted.

Area Based Cultural Heritage Policies

Greywalls, Gullane

6.57 The particular importance of the landscape setting of category A listed Greywalls and its associated Designed Landscape is recognised. Greywalls should remain the focus of its setting at all times and with reference to the framed view from the garden, the eye should never be distracted by the presence of new development.

Policy CH7: Greywalls , Gullane

Development that harms the landscape setting of Greywalls and its associated Designed Landscape will not be permitted.

West Road Field, Haddington

6.58 This greenfield land forms a prominent open area on the approaches to the town centre, framing the housing surrounding it on three sides and allowing for expansive southern views. In so doing it contributes to the character and appearance of the Conservation Area. It may be possible to accommodate some limited, carefully located and well-designed housing, appropriate to its site and location, on the downslope towards Pencaitland Road. Any such development must not interrupt the middle and longer distance southern views and, through design, scale, materials and layout, must preserve or enhance the character and appearance of the Conservation Area. Such development must also provide, at the developer's expense, the laying out and landscaping of the remainder of the West Road field as a public park. The latter will be secured by a legal agreement.

Policy CH8: West Road Field, Haddington

The contribution that the West Road field makes to the character and appearance of the Haddington Conservation Area is recognised. The Council will support a limited residential development on its down slope to Pencaitland Road provided that (1) this can be accommodated without harming the character and appearance of the Conservation Area and (2) the developer lays out and appropriately landscapes the balance of the field as a public park.

High Street, Inchview, Prestonpans

6.59 In Prestonpans, there remains scope for further improvement to the High Street and Inch View streetscapes and to important public spaces, using consistent materials to promote a coordinated approach. Part of the character of the street is that, in following the shoreline, it allows occasional glimpses of the sea on the north. Several locations where sea views are

available are landscaped and open to the public but other undeveloped sites also make a significant contribution to the character of the street. Such sites also allow views into the High Street from the coastal walkway. In assessing any development proposals on these sites, the Council must be satisfied that they would not harm the character and amenity of the area by closing off important views of the Forth

Policy CH9: High Street/Inch View, Prestonpans

In considering development proposals on vacant or underused land on the coastal side of High Street / Inch View, the Council must be satisfied that the overall amenity of the area will not be harmed by the loss of important seaward views.

DESIGN

Background

7.1 The location and quality of development directly affects everyone in society by influencing the quality of our environment and how it can be used now and in future. SPP has two principal policies, one on Sustainability and another on Placemaking. These principal policies aim to create high quality places by requiring a design led approach to new development to ensure it exhibits the six qualities of successful places:

Advice Box 9: Qualities of Successful Places	
1. Distinctive	4. Welcoming
2. Safe and pleasant	5. Adaptable
3. Easy to move around	6. Resource efficient

7.2 Securing a high quality of development is the responsibility of everyone in the planning and development process and collaborative working is required, including taking account of public consultation where this is necessary in association with a proposal. Different design approaches and solutions, and attention to detail will be required based on the proposal and character of the local area. Scottish Planning Policy, the Scottish Government’s Architecture Policy for Scotland and Designing Streets set out key stages of the design process. The following ‘design tools’ are identified as key considerations for improving design quality through these stages.

Advice Box 10: The Design Toolkit		
Design Frameworks	Wider areas of change	Planning Authority
Development Briefs / Guidelines	Place or site specific	Planning Authority
Masterplans	Site specific	Normally Developer
Design Codes	Sets ‘rules’ for design	Normally Developer
Design Statements	Explain design response	Developer

7.3 The LDP has an important role in delivering the placemaking design agenda by setting a local policy context for improving design quality. Supplementary planning guidance has been prepared to set out design principles and objectives for larger areas of change or specific sites, as set out in Policies DP8 and DP9. Additional guidance will be prepared as and when required when the plan is operative. Developers will be expected to prepare masterplans and design statements for major sites, and can also consider submitting other elements of the Design Toolkit in support of their proposals. Design statements should explain the design approach and solutions, with reference to the Scottish Government Place Standard.

7.4 Design quality is a material consideration when assessing proposals and planning permission can be refused solely on design grounds. The policies of this chapter promote high quality development and design and will apply to all development proposals in East Lothian, both within settlements and within the countryside.

Design of New Development

7.5 East Lothian has a varied and attractive townscape and landscape character. It contains many compact, vibrant and distinctive historic towns and villages as well as fine rural buildings with their own character and identity. The layout and variety of settlements, public spaces and buildings often reflects their historic function and provides their distinctiveness and identity. Settlements have vibrant cores where an appropriate mix of land uses allows appropriate activity during the day and evening. Active built frontages in these places and in other parts of urban areas ensures they have a sense of safety, security and welcome. East Lothian’s best buildings and places have evolved to a compact human scale and are well-proportioned and attractive places.

7.6 The siting and layout of development in its surroundings influences the way that buildings work together to create well proportioned and attractive public spaces. By connecting multifunctional public spaces together the urban structure can contribute to a higher quality of life as well as ease of movement: the best public spaces also prioritise the needs of people over vehicles where possible. Views to prominent landmark buildings or landmark features consolidate settlement identity and the sense of place, and make it easy for people to find their way around. Traditional buildings, including steadings, add significantly to the character and appearance of the countryside. High quality buildings and places reflect the history and context of the area and their physical and visual relationship with their surroundings.

7.7 Designs for new development must evolve from and respond to an analysis of the proposed development site and its wider context. Proposals must respect the existing character and quality of place and take opportunities to reinforce and enhance this where relevant. New development will be expected to integrate with the existing urban form, street pattern, and the plots sizes, building lines, and the form, scale and massing of development in the local area. In the countryside, new development will be expected to complement the character of the area by integrating with existing buildings or woodland or other well-contained setting, and respect and make use of landform or existing landscape features. The designs, materials and finishes proposed must complement those of existing buildings and in the local area.

7.8 Consideration must be given to how a development's resource consumption can be minimised, including making provision where appropriate for decentralised energy or heat networks. An efficient use of resources can be achieved by building at higher density. This

can also be achieved in the layout, design and materials used for buildings, as well as their relationship to one another and the landform, landscape and sun path characteristics of an area. However, a rigid application of such design principles would compromise other design requirements. A balance must be made between competing design objectives, and measures to reduce resource consumption must be incorporated whenever possible. Active travel and public transport opportunities are to be prioritised in designs and provided to encourage their use as alternatives to the private car as modes of transport.

7.9 In the development of a new settlement, in areas of significant change, or where there is potential to regenerate or improve the character and appearance of an area, there may be opportunities to create or enhance an area's character and identity. Settlement expansions and new settlements should be developed at higher densities to make efficient use of land without causing overcrowding, congestion or loss of amenity. These new mixed communities should support a mix of land uses, a range of house types, sizes and tenures as well as local service provision. Development in these areas of significant change must ensure that East Lothian's special qualities are maintained and enhanced. The design of these new places should be based on the best examples of East Lothian's existing buildings and places as well as the best examples from further afield that can be adapted to an East Lothian context.

7.10 New development must integrate with the existing landscape and townscape of the area, maximise the potential to make connections with the surroundings and reflect local vernacular architectural styles. It should create a sense of place, safety and welcome, be easy to navigate and must maximise accessibility to all in the community as well as be energy efficient and adaptable. Ensuring this will maintain the setting, character, identity and amenity of the area as well as create high quality new places of which we can be proud. Standardised buildings and layouts designed or those designed primarily for the needs of vehicles and that reflect nothing of their surroundings will not be acceptable.

Policy DP1: Landscape Character

All new development, with the exception of changes of use and alterations and extensions to existing buildings, must:

1. Be well integrated into its surroundings by responding to and respecting landform, and by retaining and where appropriate enhancing existing natural and physical features at the site, including water bodies, that make a significant contribution to the character and appearance of the area and incorporate these into the development design in a positive way;
2. Include appropriate landscaping and multifunctional green infrastructure and open spaces that enhance, provides structure to and unifies the development and assists its integration with the surroundings and extends the wider green network where appropriate.

Policy DP2: Design

The design of all new development, with the exception of changes of use and alterations and extensions to existing buildings, must:

1. Be appropriate to its location in terms of its positioning, size, form, massing, proportion and scale and use of a limited palette of materials and colours that complement its surroundings;
2. By its siting, density and design create a coherent structure of streets, public spaces and buildings that respect and complement the site's context, and create a sense of identity within the development;
3. Position and orientate buildings to articulate, overlook, properly enclose and provide active frontages to public spaces or, where this is not possible, have appropriate high quality architectural or landscape treatment to create a sense of welcome, safety and security;
4. Provide a well connected network of paths and roads within the site that are direct and will connect with existing networks, including green networks, in the wider area ensuring access for all in the community, favouring, where appropriate, active travel and public transport then cars as forms of movement;
5. Clearly distinguish public space from private space using appropriate boundary treatments;
6. Ensure privacy and amenity, with particular regard to levels of sunlight, daylight and overlooking, including for the occupants of neighbouring properties;
7. Retain physical or natural features that are important to the amenity of the area or provide adequate replacements where appropriate;
8. Be able to be suitably serviced and accessed with no significant traffic or other environmental impacts.

7.11 The Council will prepare design guidance and, where appropriate, Area Design Frameworks, Development Briefs and guides to assist the operation of these policies as appropriate.

Advice Box 11: Design Statements

All planning applications for national or major developments types must be accompanied by a design and access statement. All planning applications for development of a local development type where the land to which the application relates is listed in Section 13(2) of Part 3 of The Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2013, including in a conservation area, historic garden or designed landscape, the site of a scheduled monument or the cartilage of a category A listed building must be accompanied by a Design Statement. This does not apply to applications made under section 42 of the Act, for engineering or mining operations, householder development or where a change of use to land is proposed.

Housing Density

- 7.12 Housing is the largest single urban land use. In line with national policy new residential development must ensure efficient use of land and other resources and create mixed communities with a full range and choice of house types and sizes. The density of housing development can help secure this aim. Low density development (less than 30 dwellings per hectare net (dph) makes an inefficient use of land, places greater dependence on use of private cars and usually results in mostly detached housing. Density levels achieved from many volume house building developments in East Lothian have been approximately 19 - 20 dph net, although increases in housing density have been achieved in more recent years since this policy has been in use.
- 7.13 Increasing new residential development density to an average of 30 dph net is a move towards promoting a higher density of development at a level appropriate to the character of the area. It is possible to accommodate such a higher density of development in building forms common to East Lothian. Such a density of development already exists in the area and has been achieved using a full range and mix of housing types and sizes, including detached, semi-detached, terraces, tenements and flatted developments of an appropriate height. This releases land for other uses, including quality multifunctional public open space. Developing at higher densities by using such buildings also requires fewer resources to construct, heat, service and maintain buildings.
- 7.14 Increasing residential density to 30 dph net must be a product of the design process, including an assessment of how best a site can absorb such development to create an interesting and distinctive housing area that respects and responds to its context. Certain locations may be developed at higher density, provided all relevant local plan policies can be satisfied. On larger housing sites it will be possible to achieve 30 dph net through provision of the full range of house types and sizes and the various residential environments and character areas required from such developments. On smaller housing sites it may not always be possible to achieve 30 dph net as they may present fewer opportunities to absorb the required density of development while providing an appropriate range of house types and sizes in a form that complements the townscape and landscape setting of the area.

Policy DP3: Housing Density

All new housing sites will be expected to achieve a minimum average density of 30 dwellings per hectare (net) using a full range of housing types and sizes. Where appropriate this density may be increased to respect and respond to the particular circumstances of its location, in particular the accessibility of the site to public transport and other relevant services, and the need to encourage and support the provision of local facilities necessary to high quality urban living.

This should be achieved by using a full range of house types and sizes: however, if an appropriate range of house types and sizes cannot be provided in a form of development that complements the townscape and landscape setting of the local area in which the development is to be located then lower densities may be acceptable; this must be justified by developers to the satisfaction of the Council through masterplans and design statements, and justification based only on demand considerations of a particular market sector will not be accepted.

Major Development Sites

- 7.15 Where larger housing, employment or mixed use development is proposed, the developer must provide sufficient information from the outset to allow the design quality of the whole development to be assessed and secured. Different developers may develop certain phases or land parcels and a clear design strategy for the entire allocated site must be established and agreed to ensure that a comprehensive solution can be delivered.
- 7.16 This must be secured by submission of a masterplan accompanied by relevant supporting information for the entire allocated site. The masterplan must conform to relevant policies and guidance and establish a clear long-term three dimensional development strategy for the entire allocated site and set out the costs, phasing and timing of development. It must ensure the new development respects and responds to its context and direct the urban design strategy for the entire site to ensure a cohesive built environment is produced.
- 7.17 The approved masterplan and its supporting information must communicate the level of detail necessary to provide the context, clarity and certainty to inform and control future planning applications under it. All proposals of a major development type as defined by The Town and Country Planning (Hierarchy of Developments) (Scotland) 2009 require the submission of a masterplan for the entire site and an accompanying supporting statement.

Policy DP4: Major Developments Sites

All housing and employment proposals of a major development type as defined by the provisions of The Town and Country Planning (Hierarchy of Developments) (Scotland) Regulations 2009, require the submission of a masterplan for the entire allocated site and an accompanying supporting statement.

Masterplans must be submitted prior to or as part of an application for planning permission in principle or full planning permission. As a minimum, the masterplan submission must describe and illustrate all the following information:

1. How the masterplan design will be informed by and responds to the contextual analysis of the site and its surroundings;
2. The development strategy, including the access and transportation requirements, the use of building types, the location and nature of proposed land uses, the landscape, green network and open space strategy for the site, and any key public views as well as the nodes and focal points that must be retained and created;
3. How the proposal will be implemented setting out the phasing, timing and basic economic assumptions of development;
4. How the various development phases will be brought forward to ensure an overall consistency of design and layout with provision for the delivery of shared infrastructure;
5. Points of access to and within the site and any required off site road improvements, and how opportunities to maximise connections between the site, its surroundings and different development phases will be realised, including by pedestrian and cycle routes;
6. The hierarchy of the movement framework, including the streets to be treated as Home Zones / shared surface spaces and the safe routes to school;
7. A well connected network of multifunctional public spaces that have been designed together with the layout of buildings, accessed by a movement framework (road, cycle and footway network) that presumes in favour of walking and cycling in appropriate areas, and optimises the potential for integrated transport;
8. Indicative building lines and aspects of buildings adjacent to main thoroughfares and the public open space network that will ensure the creation of a sequence of welcoming, distinctive principal public spaces and a series of views through them;
9. Indicative cross sections of the principal thoroughfares and open spaces illustrating the relationships between buildings, public spaces and the use of public realm landscaping;
10. The locations for taller buildings and their maximum height;
11. The locations for higher, medium and low density areas with the density range;
12. How the design seeks to minimise resource consumption in its response to the contextual analysis through layout and building design, while complementing other requirements;
13. Indicative building design, colours and materials to be used on buildings to secure cohesive and harmonising development area;
14. For housing development, the proportion and location of dwelling types, sizes and tenures, including the integration of affordable housing and the provision, location and means of integrating housing with any other proposed uses;
15. The size, shape and development capacity of the individual phasing land parcels;
16. The type, location and incorporation of Sustainable Urban Drainage Systems and the required provision of water recycling facilities;
17. The anticipated location for visible utilities infrastructure housings, including electrical substations and gas compressor stations.

Extension and Alterations to Existing Buildings

- 7.18 Extensions and alterations must be well designed and respect the character of the existing building and its surroundings. Generally, any alteration or extensions of, an existing building should be designed to appear as an integral part of the original building. For example, if the original building has a pitched roof then it is likely that an extension will require a roof of similar pitch, particularly on prominent public elevations. Furthermore, the size of the extension should be such that it is not seen to overwhelm the existing building, leading to the existing building appearing subservient to the extension.
- 7.19 The scale and positioning of an extension should minimise any adverse effects on the privacy and amenity, including the effects of sunlighting and daylighting, of neighbouring properties. The amount of accommodation relative to the plot size, including the area of garden ground remaining, and the extension's proximity to property boundaries will also be considered. Such requirements will be most relevant for housing. Extensions to business and industrial premises are likely to reflect the more functional requirements of their use and location.

Policy DP5: Extensions and Alterations to Existing Buildings

All alterations and extensions to existing buildings must be well integrated into their surroundings, and must be in keeping with the original building or complementary to its character and appearance. Accordingly such development must satisfy all of the following criteria:

1. It must not result in a loss of amenity with neighbouring uses or be harmful to existing residential amenity through loss of privacy from overlooking, or from loss of sunlight or daylight.
2. For an extension or alteration to a house, it must be of a size, form, proportion and scale appropriate to the existing house, and must be subservient to and either in keeping with or complementary to the existing house;
3. For an extension or alteration to all other buildings, it must be of a size, form, proportion and scale appropriate to its surroundings and, where the existing building has architectural merit be in keeping with or complement that existing building;

Development that does not comply with any of the above criteria will only be permitted where other positive planning and design benefits can be demonstrated.

- 7.20 The Town and County Planning (General Permitted Development) Scotland) Amendment Order 2014 extended permitted development rights for alterations to unlisted buildings outwith a conservation area to all classes of development other than buildings within Class 7 (Hotels and Hostels) and Class 11 (Assembly and Leisure). Consequently planning permission

is still required for any alterations, including the installation of security shutters, on buildings in either Class 7 or Class 11 use. To safeguard the character and appearance of the area it is important to control the installation of shutters on these buildings.

Policy DP6: External Security on Unlisted, Buildings Outwith a Conservation Area

External security should be designed to allow the frontage and display area of the building to remain visible. Where they would have a neutral affect on the character and appearance of the area in which they would be located or where it can be demonstrated that alternative security measures are not practical, solid roller shutters may be acceptable. It will be a condition of planning permission that shutters and grilles on a street frontage of a building will be open or removed whilst trading.

Note: For listed buildings or buildings within a conservation area see Policy CH2 and associated supplementary planning guidance.

Infill, Backland and Garden Ground Development

7.21 In built up areas, infill sites (where the site has a direct frontage on to a road) and backland sites (where access to a road requires to cross adjoining land) can be suitable for new development. Their proximity to existing services and the avoidance of the use of greenfield sites can have positive environmental benefits. Proposals for development within residential areas often involve the subdivision of garden ground to form a new house plot. All proposals for infill and backland development must be consistent with the general development policies outlined in DP1 and DP2 above. Such development will not be permitted on existing areas of open space such as parks, playing fields and informal open space that make a positive contribution to the leisure, recreation or amenity needs of an area.

7.22 Throughout East Lothian there are a number of urban areas characterised by housing set in substantial areas of garden ground with mature planting. These often fall within Conservation Area and may be Listed Buildings or in close proximity to such buildings. There is significant pressure to develop new houses in garden ground and in certain situations this may be detrimental to the character of these areas. Such development must satisfy the following criteria, in addition to the design policies contained elsewhere in this chapter.

Policy DP7: Infill, Backland and Garden Ground Development

Outwith greenbelt and countryside and coastal locations, the principle of development within infill and backland locations including the subdivision of garden ground will be supported where:

1. The site can accommodate the entire development, including an appropriate amount of open space, satisfactory vehicle and pedestrian access, car parking and where necessary vehicle turning space; and
2. The occupants of existing neighbouring development experience no significant loss of privacy and amenity and occupants of any new development must also enjoy privacy and amenity; and
3. The scale, design and density of the proposed development will be sympathetic to its surroundings, overdevelopment of the site will be unacceptable and landscape and boundary features important to the character of the area must be retained where possible; and
4. There will be no material loss of greenfield land or open space important to the character or recreation and amenity requirements of the area, and no loss of important physical or natural features.

Design Standards for New Housing Areas

7.23 East Lothian Council requires that high quality design principles are incorporated into the design and layout of all new developments. Scottish Planning Policy and Designing Streets support this. These policy documents also promote the use of shared space streets in new development. High quality design is at the heart of making places safe, legible and welcoming and supporting integrated land use and transport. Designing better places to live, work and play that improve the integration of places, people and their movement needs represents a move towards realising such objectives. The Council's Design Standards for New Housing Areas will provide supplementary planning guidance.

Policy DP8: Design Standards for New Housing Areas

The principles of the Council's supplementary planning guidance Design Standards for New Housing Areas must be incorporated into the design and layout of all new relevant developments. All Home Zone / shared surface street designs must also be consistent with this document.

Development Frameworks / Briefs

7.24 The Council has adopted Area Design Frameworks and / or Development Briefs for the sites allocated by this plan. It may prepare or adopt additional guidance as the plan is operative to set out key design objectives and requirements for the development of allocated land.

Policy DP9: Development Frameworks and Briefs

Proposals for the development of sites that are subject to an Area Design Framework and / or a Development Brief that has been adopted by the Council must conform to the relevant framework or brief.

DELIVERY

Background and Purpose

- 8.1 The LDP is to focus on how best use can be made of existing infrastructure as part of its spatial strategy. Where this is not appropriate it is the role of the LDP (consistent with Scottish Government Circular 3/2012) to identify where the provision of additional infrastructure capacity or new facilities will be required, and to ensure that developers contribute towards these where appropriate. The SDP and its Action Programme set out known strategic infrastructure requirements, both on a cumulative and site specific basis. The LDP and its Action Programme confirm these and identify further local requirements as well as necessary land safeguards. Developers must mitigate the impact of their development by contributing towards the provision of additional infrastructure capacity or facilities as appropriate and required.
- 8.2 The LDP Action Programme identifies necessary infrastructure projects, and who will be required to lead on their delivery with expected delivery timescales: it also identifies who will need to contribute towards funding them. Supplementary Guidance on Planning Obligations has been prepared to accompany the LDP. It sets out the requirements for developer contributions. The Supplementary Guidance links to the LDP and Action Programme and provides further detail on the policy approach, the types and scales of development to which it will apply and mechanisms for delivery.

Context, Funding and Delivery Mechanisms

- 8.3 The LDP and Action Programme set out an ambitious and proactive strategy for new development across East Lothian while ensuring that associated impacts on infrastructure and facilities will be properly addressed. The documents and the Supplementary Guidance on Planning Obligations set out the requirements for additional infrastructure capacity and new facilities and the types of new development that will be expected to contribute towards their provision. This is so developers and communities have early sight of what will be required in association with new development in the area.
- 8.4 The LDP and Action Programme are prepared on the basis that new infrastructure capacity and the funding or provision of it will primarily be the responsibility of developers. Where such provision is to be made this is normally referred to as a developer contribution. Such contributions can be secured by use of a planning obligation, although the use of planning conditions or alternative legal agreements should also be explored. Use of a planning obligation is normally only necessary where successors in title to the land need to be

bound by the required obligation, for example where phased contributions to infrastructure are required.

- 8.5 Planning obligations can include requirements for financial contributions and / or the transfer of serviced land. Such a contribution can only be sought where the need for it arises as a direct result of the development, or from the cumulative impact of development in an area, and it would overcome or mitigate a barrier to the approval of planning permission. A developer contribution must serve a planning purpose, be fairly and reasonably related in scale and kind to the development, be necessary to make the proposal acceptable in planning terms, and be reasonable in all other respects.
- 8.6 Developers are not required to provide more mitigation than necessary to address the impact of their development; similarly, the mitigation of development related impacts need not be funded or provided by certain service or infrastructure providers, including the Council. Applicants are not expected to resolve existing deficiencies in provision. The purpose for which any contribution is required must also be clearly specified, including the infrastructure to be provided. Although it is not possible to identify all circumstances in which a developer contribution will be required, where known in advance this should be set out in the development plan or as part of pre-application discussion.
- 8.7 In terms of delivery, there may be situations where additional infrastructure capacity needs to be provided before a development can commence. In these circumstances the timescales for gathering contributions to deliver infrastructure on time to enable such a development normally needs to be aligned with the costs and cash flow for delivering the infrastructure project it depends on. However, there may be situations when staged or phased payments can be agreed to align the payment of contributions with a development appraisal rather than the cash flow of the infrastructure project, if the associated risks can be managed by use of a planning obligation. The Council could also give consideration to the possibility of infrastructure being front funded, and thus enable development, through other mechanisms, with costs being recovered through planning obligations with staged payments as developments progress.
- 8.8 The LDP has established its development related impacts and associated mitigation and costs for the interventions needed to deliver the LDP strategy and sites have been identified. A cumulative assessment of impact, mitigation and cost apportionment has also been carried out where appropriate and detailed in Supplementary Guidance. This is to allow developers and landowners to identify expected developer contributions. In this context the Council expects early pre-application discussion between applicants and infrastructure providers and for them to agree the nature, scale and timing of any developer contributions and scope of any planning obligation before planning applications

are submitted. This is particularly true where there is a need to resolve complex issues, such as the phasing and timing for the funding and delivery of infrastructure capacity or facilities relative to the phased development of a site. Securing early clarity on these issues will be integral to the preparation of sound development appraisals, proposals and masterplans and ensuring the planning authority's performance targets for determining applications can be met. Proposals submitted without such prior agreement risk refusal of planning permission solely on these grounds.

- 8.9 The availability or ability to provide additional capacity for windfall proposals in addition to that needed for LDP sites will be assessed on a cumulative and case by case basis. Such proposals will not be supported if they would undermine LDP sites. Similarly, if windfall proposals are dependent on the provision of infrastructure capacity from uncommitted projects, a lack of certainty over the timing for provision of such capacity may make windfall proposals unacceptable in planning terms.

Policy DEL1: Infrastructure and Facilities Provision

New development will only be permitted where the developer makes appropriate provision for infrastructure and community facilities required as a consequence of their development, including but not limited to those items identified by the LDP, the Action Programme and Supplementary Guidance on Developer Contributions. The type and scales of development that will normally be expected to make such contributions are as follows:

- Proposals of 5 or more dwellings, including affordable housing;
- Employment, retail, leisure or tourism proposals of 1,000m² gross floor space or larger;
- All 'major' development proposals.

Any necessary provision must be phased as required with the new development. Planning conditions and/or legal agreements will be used as appropriate and required to secure this provision, which could include land and/or a capital contribution.

Appendix 1

Cumulative Wind Turbine Issues

Cumulative issues will be considered with regard to SNH Guidance 'Siting and Designing of Windfarms in the Landscape 2014', 'Siting and Design of Small Scale Wind Turbines of between 15 and 50 metres in height - March 2012' and 'Assessing the Cumulative Impact of Onshore Wind Energy Development' and successor guidance. Cumulative issues will also be considered with regard to the following:

Retention of distinctiveness of lowland and upland areas: there is a strong, established pattern of wind turbine development in East Lothian, with clustered large scale development in the expansive upland landscapes, and smaller scale development in the lowlands. Wind development at the wrong scale would reduce this distinctive pattern: this applies to large scale (in terms of height) development in the lowlands, and smaller scale development in the Lammermuir areas. Large scale development in the lowlands as well as the uplands could lead to East Lothian being defined by wind development instead of wind turbines being a component of the landscape.

Retention of distinctiveness within Scotland: it is important for the different landscapes of Scotland to remain distinctive both within their locale as well as regionally and nationally. The existing pattern of development in East Lothian is different from the other similar east coast landscapes of Fife, Scottish Borders and Moray. This distinction should be retained. The Lothian Edge provides a boundary between the central belt and the upland areas within the Scottish Borders, with panoramic views at the fault line across central lowland Scotland. The distinction of these different landscapes is obvious to walkers and road travellers alike. This distinction would be compromised by larger scale wind development in the lowlands of East Lothian.

Pattern of existing development and Relief from development: existing large scale windfarms in the Lammermuirs around East Lothian are set back from the East Lothian edge of the Lammermuir Hills and have some degree of containment. They are in a 'cluster and space' pattern. Further wind farm development within the Lammermuir area, especially stand alone development, risks there being few or no areas within the East Lothian Lammermuirs which are not significantly impacted on or dominated by windfarm development. It is important that some part of the landscape is retained free from windfarm development for existing and future generations to enjoy. The Lammermuirs contain some of East Lothian's wildest land in terms of remoteness, naturalness and lack of modern artefacts, which could be lost by further 'infill' development.

Visual relief is provided by a general lack of visibility of windfarm development at the Whiteadder and Hopes valleys and this should be retained. Most if not all of the summits in the East Lothian Lammermuirs have been affected by views of windfarms, with some summits being overlooked by turbines or having them in very close proximity, including Wester Dod, Heart Law, Bransly Hill, Meikle Says Law and Spartleton. It is therefore important that some summits should remain which are relatively unaffected by wind development and that the main summits which have wind development in close proximity retain some of their character and clear views outwards. Further encroachment towards the summits of Wester Dod, Bransly Hill, Meikle Says Law, Spartleton, Lammer Law, Harestane Hill, and Moss Law in particular should therefore be carefully considered.

Visual relief is also important in the lowland context.

Containment of existing windfarm development: this applies particularly to development at Dun Law/Pogbie where the rim of the scarp is an important 'edge' and Aikengall/Crystal Rig and Fallago, where the East Lothian edge of the Lammermuir Hills provides some containment.

Lammermuir Skyline: windfarm development on the skyline can be prominent. From parts of the East Lothian Plain a considerable proportion (over half) of the skyline is affected by wind development. There are three main issues; firstly, the horizontal skyline should continue to appear as the dominant feature; secondly, wind development should continue to appear set back from the East Lothian edge of the Lammermuir Hills; and thirdly, physical and visual spacing between windfarms should be maintained. Different design, scale and speed of turbines on a prominent or important skyline can become a visual distraction and affect visual amenity.

Oldhamstocks Conservation Area: the area in and around Oldhamstocks Conservation Area is affected by existing and consented wind development. Cumulative impact on this village is a matter of concern and the Council is seeking to resist further proposals that would have an adverse effect on the setting of the Conservation Area.

Clutter: capacity for visual clutter in association with large and complex industrial buildings such as the cement works, or Torness Power Station, quarries, power lines and transmission masts (such as on the Garleton Hills, Blackcastle Hill or at Stevenson) and related impact on the landscape pattern and scenic attraction of the area. This could occur with an individual wind turbine in association with other existing development or if turbines were associated with the majority of land holdings.

Domination of local character: effect on the scenic attraction of different character areas: e.g. the simplicity and openness of the agricultural plain, intricacy of river valleys; or on pattern of woodland and trees within the North Lammermuir Platform. The larger the turbine, the harder it is likely to be to accommodate a number of them without them becoming the dominant features. Inter-visibility of developments limits capacity in open and highly visible areas. The Tyne valley between Haddington and Pencaitland now contains several medium scale clearly visible turbines which are widely visible in the local area. The coastal plain around Dirleton/Gullane/Drem has several different design, scale and speed of turbine as well as visibility of turbines in the Lammermuirs and Fife. The cumulative impact of further development here must be carefully considered.

Fragmentation of existing pattern of development: Where turbines do not relate well to existing buildings and point features in the landscape this affects the robust, recognisable, consistent and characteristic pattern of built development. Turbine siting can affect the appearance of spread of built development; for example turbine development in the open spaces north of the A1 in the Musselburgh Prestonpans fringe and along the A1 corridor could affect the perception of where built/industrial development ends.

Sequential effects: there are potential sequential effects on the experience of travelling throughout East Lothian, including the A1 corridor, the East Coast Mainline Railway and the John Muir Way.
